SIMOTICS NEMA Motors

Low Voltage AC Motors

+Medium Voltage – Advantage Series

GP, SD, XP, DP

Selection and Pricing Guide

[siemens.com/nema-motors](https://www.siemens.com/nema-motors)

Licensed Motors Have NEMA Premium® on their Nameplate

Buy with Confidence

Buying a motor can be a difficult process. Is it the right size for the application? Is it the right design? Is it going to last? Is it going to perform to its specifications? Will it meet efficiency claims? The last question is easy to answer if NEMA Premium® is on the label.

NEMA Premium® Licensees Meet a Higher Standard

All motor manufacturers are required to submit efficiency test data to the US Department of Energy to receive their Certificate of Compliance. Data must be compiled at any qualified testing facility, including the manufacturers' own test laboratory. It takes extra to wear the NEMA Premium® label. A NEMA Premium® Licensee has agreed to go beyond minimum US DOE requirements.

NEMA Premium® Licensees Must Prove Efficiency Claims

What's on the nameplate is not what you always get when it comes to efficiency. Most manufacturers will attempt to ship what is on the nameplate, but do not always deliver. If you want assurance that a motor meets its efficiency claims, look for a NEMA Premium® certified motor.

NEMA Premium® Licensees Must Submit to Third Party Testing

NEMA Premium® Licensees are required to ship motors from distributor's inventory to a third party qualified laboratory for efficiency verification testing on a regular schedule. The specified motor is randomly selected. NEMA Premium® Licensees deliver what they claim, and you can buy with assurance.

Introduction

General information regarding the range of motor, efficiency, Warranty, cancellation and tools.

- 1-1 Wide Selection of Motors
- 1-2 Electric Motor Energy Efficiency
- 1-3 Warranty and Support
- 1-4 Cancellation Charges and Change Notices
- 1-5 Website and Tools

Wide selection

Providing value also means having the right motor for the job. At Siemens, we strive to offer a wide variety of motor types, in all frame sizes and power ratings with a comprehensive set of options and quick modifications.

Our LV NEMA motor portfolio consists of motors with power ratings of 1HP up to 800HP with a variety of voltages up to 600V, stocked to meet the needs of the North American market.

Need a motor for a special project...Siemens has that covered as well with a wide selection of modification and custom options available and a highly skilled quotation team to help ensure that the best selection for the job is offered.

Our highly qualified research and development group is working to add to this list as part of our commitment to become your single source for motors

The world's most energy efficient line of motors

Lower your energy costs today with the world's most energy efficient line of motors. New regulatory standards and rising energy costs create increasing pressure to maximize energy efficiency and reduce your carbon footprint.

To meet your cost of ownership and motor management needs, Siemens offers several levels of energy efficiency in many of its motors:

- NEMA Premium® (MG1 Table 12-12)
- NEMA Super Premium® (IE4)

Total customer support

Siemens is known as a Global leader in technology while also providing outstanding collaboration with partners and ensuring the success of our customers. A dedicated sales force with in-depth product knowledge and training is only a phone call away and available to provide a complete solution from a breadth of available products. Application and project support by dedicated teams have the customer's best interest in mind while reviewing technical content and offering competitive quotations. The Order Management team focusses on and takes great pride in putting our customers first. Fielding customer questions, providing order status updates and expediting shipments are just a few examples of this team's expertise and support.

Availability

Siemens has hundreds of distributor stocking locations throughout North America with a wide selection of NEMA and IEC frame sizes and ratings. Motors are available same day from a local source you can trust.

Need something special? Our modification centers have complete motor modification capabilities to help you get the exact motor you need, when you need it.

Iron-clad quality

The quality of our motors begins with the design experience we have gained through more than 100 years of manufacturing and installing motors. We build on this experience every day with new designs that incorporate the latest materials and techniques to provide even higher levels of performance, operating efficiency and reliability.

These advanced motor designs are manufactured in a state-of-the-art, ISO 9001 certified facility. Here, our manufacturing technicians subject each motor to more than 100 separate quality inspections before it leaves our plant ensuring it meets the high standards our customers expect

U.S. Dept. of Energy Integral Horsepower Motor Rule Effective June 1, 2016

The United States Department of Energy passed a final rule in 2014 that covers 1-500 HP (0.75 – 370 KW) 3-phase electric motors. The new law will supersede the Energy Independence & Security Act (EISA) of 2007 and become effective June 1, 2016. For reference and complete wording of the law, refer to: <https://www.regulations.gov/document?D=EERE-2010-BT-STD-0027-0117>

The new legislation broadens the number of motor types covered and closes most of the loopholes that permitted exceptions in both EPCA 1992 and EISA 2007 legislation. In essence, most 3-phase industrial motors manufactured will be required to meet the efficiencies listed in NEMA MG-1, table 12-12 (reference NEMA Premium® efficiency).

Additional motor types covered include, but are not limited to:

- 201-500 HP (previously 1- 200 HP)
- Footless (C-face & D-flange)
- Vertical (HP & LP)
- 8-pole (900 RPM)
- Brake motors (integral and add-on)
- Motors with customer special shafts, flanges, and mountings
- IEC 100 frame

Motors that are not covered by mandated efficiency regulations are:

- Multi-speed
- Inverter duty only

All of Siemens low voltage motors listed in this price guide currently meets, or exceeds, the June 1, 2016 mandatory regulations.

SIMOTICS NEMA Motors

Warranty procedure

Standard terms and conditions of sale

Warranty – Company warrants that on the date of shipment to purchaser the goods will be of the kind and quality described herein, merchantable, and free of defects in workmanship and material.

If within one year from date of operation, but not more than eighteen months from date of shipment by Company, of any item of the goods, purchaser discovers that such item was not as warranted above and promptly notifies company in written thereof, Company shall remedy such defect by, at Company's option, adjustment, repair, or replacement of the item and any affected part of the goods.

Purchaser shall assume all responsibility and expense for removal, reinstallation and freight in connection with the foregoing remedy. The same obligations and conditions shall extend to replacement items furnished by company here under. Company shall have the right of disposal of items replaced by it. Purchaser shall grant Company to determine any defect in the goods. In the event that adjustment, repair, or replacement does not remedy the defect, the Company and Purchaser shall negotiate in good faith an equitable adjustment in the contract price.

Service calls and overtime are not covered under Siemens warranty policy.

The Company's responsibility does not extend to any item of the goods which has not been manufactured and sold by Company. Such item shall be covered only by express warranty, if any, of the manufacture thereof. The Company and its suppliers shall also have no responsibility if the goods have been improperly stored, handled, or installed or if the goods have not been operated or maintained according to their ratings or according to instructions in Company or supplier furnished manuals, or if unauthorized repairs or modifications have been made to the goods.

THIS WARRANTY IS EXPRESSLY IN LIEU OF ALL OTHER WARRANTIES (EXCEPT TITLE), INCLUDING BUT NOT LIMITED TO IMPLIED WARRANTIES OF MERCHANTABILITY AND FITNESS, AND CONSTITUTES THE ONLY WARRANTY OF COMPANY WITH RESPECT TO THE GOODS.

The foregoing states Purchasers exclusive remedy against Company and its suppliers for any defect in the goods or for failure of the goods to be as warranted, whether Purchaser's remedy is based on contract, warranty, failure of such remedy to achieve its essential purpose, tort (including negligence), indemnity or any other legal theory, and whether arising out of warranties, representations, instructions, or defects from *any cause*.

| SIMOTICS Warranty type | | |
|------------------------|--|--|
| A | GP100, GP100A | 12 months in service or 18 months after shipment, whichever comes first |
| | SD10MS, SD100, XP100, XP 100 ID1, HP100, LP100, SD200, DP200 HPS | 3 Years, after shipment |
| | SD100 IEEE841, SD661, SD200 841 | 5 Years, after shipment |
| B | Remedy | Siemens option to repair or replace |
| C | Purchaser's Responsibility | Transportation damage claims, Order management, Removal and freight |
| D | Exclusions | Improper storage, In and out costs, Disassembly and installation, transportation damages |
| E | Shipment Normal | FOB our dock, Freight allowed |

Reference notes

1. After the inspection, contact Little Rock office for authorization of repair or replacement.
Unapproved repairs will be denied.
2. Removal, installation, freight, and service calls are NOT covered by warranty.
3. A standard EASA Warranty report must be filled out and, a Siemens job/purchase order # issued. The Warranty report and nameplate (if motor scrapped in the field) plus the invoice must be sent to the Little Rock Plant.
4. Replacement Parts – will be furnished at no charge from the factory, i.e., bearings fans, etc.
5. Replacement Motors – will be furnished at no charge from the factory. Should it be necessary for reasons of expediency for the service shop to replace a motor from their stock, a replacement motor will be furnished at no charge from the factory, shipped freight allowed.
6. Defective parts, i.e., bearings, are subject to return upon request to the factory for inspection and approval for reimbursement.

Date coding

Siemens SIMOTICS motors date coded by the model number/date code/serial number on the nameplate.

The first two digits in the serial number represent the factory (Q2 in the example). The following three digits represent the date code. Siemens date codes for NEMA frame size, low voltage motors built in USA and Mexico is as follows: The first digit is alphabetic and represents the month. The second and third digits are numeric and are the last two digits of the year.

| | |
|--------------|---------------|
| A = January | G = July |
| B = February | H = August |
| C = March | J = September |
| D = April | K = October |
| E = May | L = November |
| F = June | M = December |

IMPORTANT NOTICE

MAIL or EMAIL A PROPER WARRANTY REPAIR REPORT, AND SUPPORTING EVIDENCE OF FAILURE TO THE WARRANTY ADMINISTRATOR, IF SIEMENS IS TO BE BILLED FOR OVERTIME, AUTHORIZATION MUST BE OBTAINED FROM WARRANTY ADMINISTRATOR BEFORE OVERTIME WORK IS PERFORMED. MATERIAL AND SERVICES ARE PURCHASED FOR RESALE AND ARE EXEMPT FROM STATE AND LOCAL SALES AND USE TAX.

Cancellation charges

Note: A minimum charge of \$100 will be assessed for any order cancellation for modified or custom motors.

Stock motors and Spares

- No charges will be incurred if an order is cancelled prior to shipment.
- A stock motor is returnable (freight paid by purchaser) immediately after shipment if returned in "new" condition (original, undamaged packaging) for a minimum restocking charge of 20% of the motor net price.

Non-stock motors

- For non-stock motors, the following table will apply to determine cancellation charges after the order is received and entered at the factory. Completion week will be determined by a Siemens Customer Service Representative.
- A charge of 15% of the total net motor price will be assessed if an order is cancelled after it has been released for engineering and drafting whether or not the drawings have been completed and/or submitted for approval.

Change notice

All change notices applied to in-process orders logged into the Siemens customer service department and requiring a product change will be subject to a \$100 net charge plus the applicable modification adder. Delivery dates will be adjusted according to the type of change/modification requested. This policy does not pertain to commercial changes such as "ship to" or "bill to" addresses.

1 SIMOTICS NEMA Motors - Introduction

1-5 Selection and configuration tools

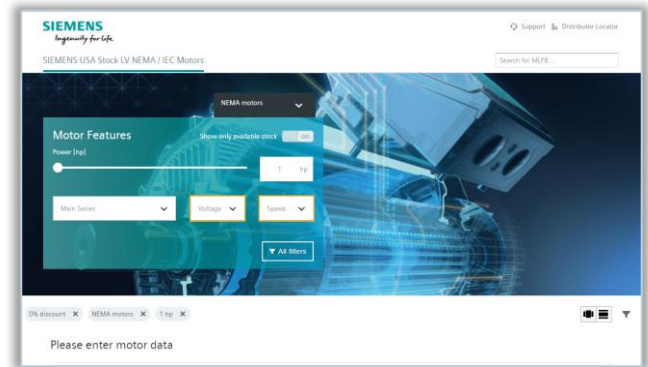

In our **website** you will find all sorts of useful information, pre-sales information, technical information, contacts and local partners as well as on-line support.

www.usa.siemens.com/nema-motors

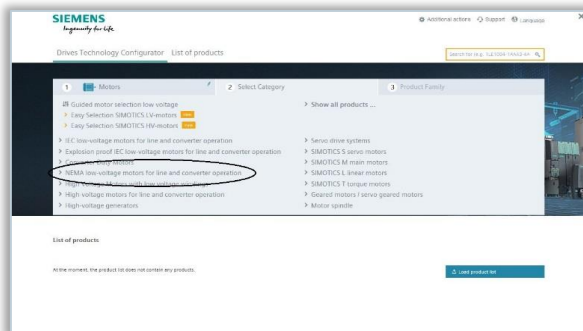

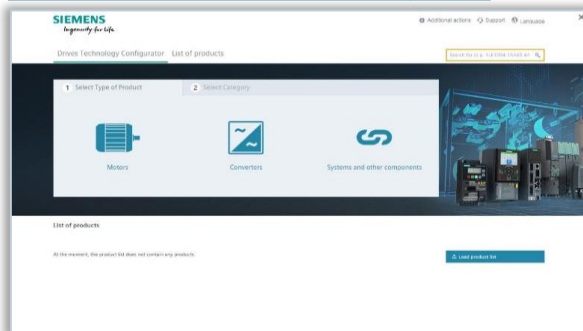

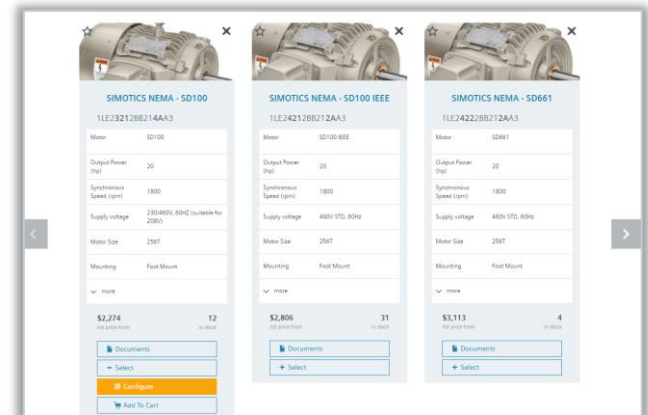

The **SIMOTICS Quick Selection Tool** provides a simple 5 click selection process to configure your motor and check stock. This tool also provides direct links to the Industry Mall for ordering or the DT- Configurator to add options.

<http://www.usa.siemens.com/lvm-quickselect>

The **DT configurator** has been developed to facilitate the selection of motors and its wide range of special features. It is integrated as an offline "Selection Tool" in the interactive catalog CA01 and is also available online. The DT Configurator not only renders the correct ordering part number for you, but also provide all relevant documentation to the selection, operating instructions, data sheets, curves and dimensional drawings.

<http://www.siemens.com/dt-configurator>

SinaSave

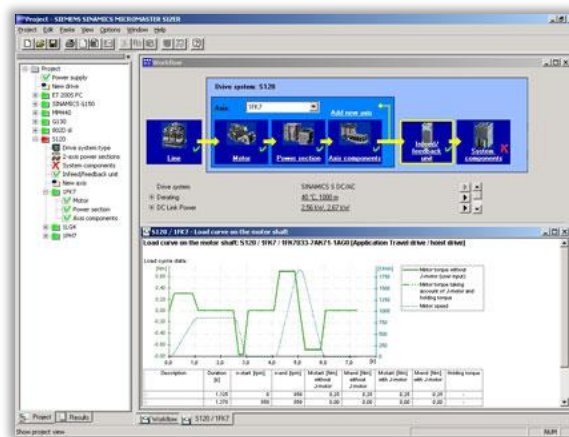

The energy-saving program **SinaSave** is suitable for application with motors for on-line fed operation (fixed speed) and inverter-fed (variable speed). With on-line operation, you can calculate the cost savings as well as the amortization time for the additional cost of the Siemens energy-saving motors with three different comparisons and overall plant analysis.

SIZER

Sizer configuration tool provides an easy-to-use means for configuring drives and controls while at the same time supports all engineering steps in one workflow:

- Configuring the power supply
- Motor and gearbox design, including calculations of mechanical transmission elements
- Configuring the drive components
- Selecting the required accessories
- Selecting the line-side and motor-side power options, e.g., cables, filters, and reactors

[Pricing](#)

1) SD200 841

Voltage

LV NEMA motors can operate from 200-600V according to the winding selection. Windings up to 230V can only be applied to motors with 75HP or less.

Part-Winding-Start and Wye-Start/ Delta-Run are special windings that help to limit the amount of inrush current at startup. Both options require a special motor starter to operate correctly.

Special voltage, **M6Y**, can be used for any voltage within the voltage range listed for each.

AC NEMA motors are designed with the following tolerances in accordance with NEMA MG-1:

- Voltage tolerance: +/-10% of rated voltage
- Frequency tolerance: +/- 5% of rated frequency
- Voltage & Frequency combined tolerance: +/-10% (sum of absolute values)

Winding Connection:

440 frames with 460V will have 12 lead connection as standard. When SD200 841 motors with 460 or 575V will have 6 lead connection with paired leads for flexibility in connection as seen in Figure 1-1.

500 frames will have 12 lead connection as seen in Figure 1-4.

See [Terminal Box and Leads section](#) for additional information on motor leads.

C-Face Foot Mount

D-Flange Foot Mount

Foot Mounting (no flange)

Foot mount motors without a flange will have universal mounting feet with mounting holes to cover a range of sizes. Motors may be configured to mount in vertical, horizontal, wall, or ceiling mount. The proper configuration may be critical to ensure the motor has proper drain locations, lifting provisions and bearing configuration. Next Generation NEMA motors configured for vertical mounting will have three point lifting provisions included.

Flange Mounting

The drive end bearing housing can be replaced with flange mounting for direct coupling to the driven equipment. Flanges can be supplied with or without feet (coming soon) and as vertical or horizontal as required by the application. L449 frame must use the motor feet as support with flange mounting in either vertical or horizontal mounting positions.

Foot mounted motors can be offered with self-supporting D-flange on request, Contact Siemens Low Voltage Motor Quotation Team for a quotation.

C-Face

The NEMA C-face has threaded holes in the flange and the mounting hardware will be introduced from the driven equipment side. The C-face can be added to a stock motor as a modification where applicable.

D-Flange

The NEMA D-flange will have through holes that are unthreaded. The D-Flange can be custom built with NEMA dimensions.

Winding Insulation

Siemens NEMA stator is random wound and insulated with Class F insulation system which is compliant with NEMA MG-1 part 31 and is rated for 155 deg C. Spike resistant wire, **C03**, can be used to meet those more stringent specifications that require part 31 to be exceeded. The stator is protected from moisture with acrylic impregnation through a dip and bake process. The stator is designed to have a temp rise no greater than class B at nameplate horsepower.

Class H insulation is rated for 180 deg C and is used to better protect the stator when the temp rise may be higher due to ambient conditions or harsher VSD applications. Frame size 440 to 500 will have Class H insulation as a standard feature.

Moisture Powerhouse (extra dip and bake), **C04**, adds an extra layer of varnish to the winding for added protection against moisture. Vacuum Pressure Impregnation (VPI), **C01**, is an alternative to the standard dip and bake process. VPI uses a vacuum system to pull the varnish into the winding to reduce air bubbles in the varnish. Fungus protection, **C07**, **C08**, is an anti-fungal spray that is applied to the windings after the dip and bake process to help reduce fungus from growing on the windings during storage prior to operation.

Space Heaters

Space heaters help to reduce the humidity inside the motor during idle times of operation and storage. Siemens uses flexible silicone rubber space heaters that have been proven to provide long life which either meets or exceeds the overall life of the AC induction motor. Space heaters will have wattage corresponding to the voltage and motor size as seen in Table 3-1 and will have leads

to the main box as standard or an aux box as an option with leads marked per Figure 3-1.

Siemens offers low temp space heaters rated for a max surface temperature of 160 deg C for use in safe area or Division 2 areas. The heaters can be configured for operation on 115V supply, **A46**, 230V supply, **A47**, or 115/230V, **A48**.

| A46 | 400-S449 | 115 | 2 | 2.5 x 20 | 100 |
| A47 | 400-S449 | 230 | 2 | 2.5 x 20 | 100 |
| A48 | 400-S449 | 115/230 | 2 | 2.5 x 20 | 100 |
| A46 | FS500 | 115 | 2 | 2.5 x 20 | 100 |
| A47 | FS500 | 230 | 2 | 2.5 x 20 | 100 |
| A48 | FS500 | 115/230 | 2 | 2.5 x 20 | 100 |

Table 3-1

Winding temperature protection

Thermostats, **MLFB Position 15 "G"**, are supplied as normally closed. When the temperature of the motor reaches the rated temperature of the device, the switch will open and cause a trip condition. Thermostats will have leads to the main box as standard or an aux box as an option with leads marked per Figure 3-2.

Fig. 3-2

PTC (positive temperature coefficient) thermistors, **MLFB Position 15 "B or C"**, are resistive devices that increase in resistance as the temperature increases. They are set to jump to a very high resistance at a rated temperature. Options are available to have one per phase for trip only, "B", or two per phase for alarm and trip, "C". PTC thermistors will have leads to the main box as standard or an aux box as an option with leads marked per Figure 3-3 and Figure 3-4.

Fig. 3-3

Fig. 3-4

Stator RTDs, **MLFB Position 15 "K"**, are PT100 resistive thermal devices that can be used to monitor the temperature of the motor based on the measured resistance of the device. The resistance range will be 100 ohms at 0 degrees C and increase at a rate of .385 ohms per degree C. RTDs are supplied with two sets per phase (one set active and one set as spares) embedded in the DE end turn of the winding. This option also includes an aux box with a terminal strip with terminals marked per Figure 3-5.

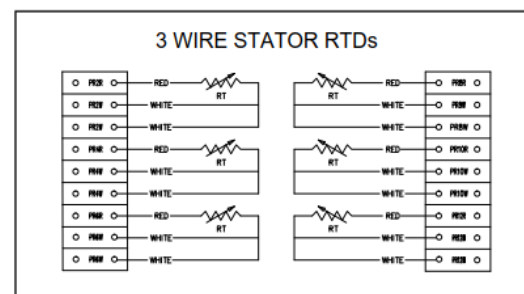

Fig. 3-5

PT1000 sensors, **MLFB Position 15 "P"**, function like the PT100 stator RTDs. The resistance range for the PT1000 sensors is 1000 ohms at 0 degrees C and increases at a rate of 3.85 ohms per degree C. This option comes with two independent sensors (one active and one spare) embedded in the DE end turn of the winding. PT1000 sensors will have leads to the main box as standard or an aux box as an option with leads marked per Figure 3-6.

Pricing

Terminal Leads

All NEMA motors come standard with flying leads (no terminal block) terminated using ring terminals. The leads are Class H insulated and identified with permanent marking. Terminal block, **K83**, is available as an option. Note: Option **K83** will prevent modifications from F1 to F2 due to reduced cable length.

As standard terminal leads will be of sufficient length to execute the termination to the power leads inside the terminal box or convert to one of the DE terminal box positions.

Special cable length can be supplied with leads extended to 60", **K81**, or 120", **K82**, outside the motor frame.

✓ Available
 ■ Standard
 -- Not Available

DE = Drive End, NDE = Non-Drive End, LHS = Left Hand Side, RHS = Right Hand Side

Main Terminal Boxes

The main conduit box is diagonally split with a single entrance hole (see drawing section for standard entry hole size) with internal grounding lug provided as standard. The standard terminal box will be cast iron and have a volume that is greater than required by NEMA/NEC. Terminal box will be supplied with a gasket between conduit box and frame and between cover and base.

Dual entry terminal box is available as an option, **T50**, and will have NPT size per [drawings and dimensions section](#). Non-standard NPT, Y96, must be defined in the order and meet the criteria defined in Table 4-1. Options **T50** and **Y96** may be used in combination to achieve a non-standard dual entry.

The Next Generation NEMA motors has a variety of terminal box mounting options. There are 4 locations for L449-FS500 and 2 locations (DE only) for FS444-449 on the frame where the main box or auxiliary boxes can be mounted. The motors will come as standard with the box on the DE at a 90 deg angle and can be modified to 45 deg, **T00**, with a simple conversion. See figure 4-1 for illustrations of terminal box mounting possibilities.

444-449 frame terminal box can be offered oversized with the entry hole location centered between the foot holes for retro-fit applications or where the centered box is desired. The oversized box is available as Steel, **T03**.

Oversized steel boxes, **T04**, **T05**, **T06**, are available in three sizes with the blank entry. See [drawings and dimensions section](#) for additional details.

The main terminal box position is defined by the 16th position of the MLFB as illustrated in Figure 4-1. The connection entry will be facing the motor feet as standard when supplied on the side of the motor or facing the F2 side when top mounted. The terminal box may be rotated in 90-degree increments in the field or by ordering with options **J84**, **J85**, **J86**.

| Frame | Max single NPT | Max Dual NPT |
|----------|----------------|--------------|
| 444-447 | 4.5" | 2 x 2.5" |
| 449-L440 | 5" | 2 x 4" |
| 500 | 5" | 2 x 4" |

Table 4-1

Figure 4-1

Auxiliary Boxes

Auxiliary terminal boxes are available for accessories included in the motor selection. The auxiliary box can be attached to the motor frame or to the side of the main terminal box. Aux box, **Rx0, Rx1, Rx2, Rx3** will be a cast iron auxiliary box. Condulet, **Rx4, Rx5, Rx6, Rx7** is an aluminum electrical condulet with a steel cover. The auxiliary box option should be selected according to the accessory that it will be paired with.

Space Heaters and other thermal protection will route to main box unless aux box is selected.

If Aux box/Condulet is configured in the same position as main box, the aux will be attached to the main, Figure 4-3.

Positions 4 and 5 will be attached to motor frame at 90 degrees with pipe nipple for frames 444-449, Figure 4-5, and attached to cover plate for frames L449-500, Figure 4-4.

Stator RTDs will come with an aux box with a terminal strip included as standard. As standard the aux box will be on the same side as the main box. This box may be relocated using one of the Cast Iron Thermal protection options at no additional charge. Bearing RTDs, **A51**, does not require an auxiliary terminal box, as it comes standard with terminal heads on each bearing housing.

Lubrication

Standard lubrication for All Siemens LV NEMA motors is EXXONMOBIL POLYREX EM (Polyurea-based grease).

MOBIL 28 Grease, **L57**, has a wide temperature range with a clay base thickener ideal for low ambient conditions down to -50C. This option is supplied as standard for low ambient option codes **B27**, **B28**, and **B29**.

MOBILITH SCH 100, **L58**, is a Lithium base alternative to our standard POLYREX EM.

Grease inlet (Alemite fitting) is standard on all SD, and DP NEMA products. SD200 841 motors include Alemite and automatic grease relief fittings as standard, **L49** option is available for other severe duty motors.

Oil mist ready, **L55**, and Provisions for oil mist, **L54**, are possible on Severe Duty motors horizontal foot mount only. Bearings must be single shield ball bearings with shields to inboard side. Motor leads are sealed to prevent mist from entering conduit box and lead material used is resistant to oil mist.

Oil mist ready will only have enough grease in the bearings to complete the routine test.

Provisions for oil mist will include the required machining on the bearings housings to be switched to oil mist in the future. The motor will be supplied as a fully greased motor with standard re-greasing provisions. Hardware and instructions will be included with the motor to switch from grease lubrication to oil mist.

Sealed Bearings, **L68**, are greased for life bearings and will not require re-lubrication. When sealed bearings are supplied on SD200 841 motors, the motors will be marked as "IEEE Std 841-2021 features". Note: Not possible for roller bearing or with other bearing or greasing options.

Bearings

Siemens standard re-greasable bearings have an L10 bearing life of 100,000 hours for direct coupled applications and 50,000 hours for belted applications when properly sized for the application and with proper maintenance. See [Technical Tables section](#) for standard bearings sizes.

Bearing Temperature Protection

Bearing RTDs, **A51**, included temperature monitoring on both the drive end and non-drive end bearing. The bearing housing is drilled and tapped for the temperature probe to rest on the outer race of the bearing with the leads in a terminal head on each end (Fig. 5-1). This allows for independent temperature monitoring for each bearing.

DP200 HPS motors will include provisions for bearing RTDs as standard. The installation of the RTDs, **A50**, can be added as a modification on this product.

Fig. 5-1

Overhung Load/Belted Considerations

Siemens recommends a roller bearing on the DE for overhung load applications. Roller bearing on DE is standard on R440 and R500 frame.

Belting details can be evaluated, **F09**, by Siemens Engineering on request. The belting form can be requested through the Siemens LOW VOLTAGE MOTOR Quotation Team. Minimum criteria for belting evaluation is listed below and cannot be properly evaluated without this data.

- Operating Application Horsepower (Can be less than the rated motor HP)
- Operating RPM
- Frame size of selected motor
- D_r = Motor Sheave Diameter (Must be within Table 5-1)
- D_n = Driven Sheave Diameter
- Number of belts
- Type of Belts (e.g. 3V, 5V, 8V, A, B, C, etc.)
- C = Distance between sheaves (center to center)
- L = Distance from center of motor sheave to end of shaft
- Orientation of motor (Horizontal/Vertical shaft up/Vertical shaft down)
- W_s = Face width of motor sheave

Fig. 5-2

| Recommended Sheave Diameters for V-belts | | | | | |
|--|--------------------|------|-----|--------------------------------------|------------------------------------|
| Frame | HP Synchronous RPM | | | Standard V Minimum Diameter (in.) | Narrow V Minimum Diameter (in.) |
| | 1800 | 1200 | 900 | | |
| 444T | -- | -- | 75 | 10.5 | 9.5 |
| 444T | -- | 100 | -- | 11 | 10 |
| 444T | 125 | -- | -- | 11 | 9.5 |
| 445T | -- | -- | 100 | 12.5 | 12 |
| 445T | -- | 125 | -- | 12.5 | 12 |
| 445T | 150 | -- | -- | 13.2 | 10.5 |
| 447T | 200 | -- | -- | 15.8 | 13.2 |
| 449T | 250 | -- | -- | 18.4 | 13 |
| 449T | 300 | -- | -- | 24.8 | 15.4 |
| L449L | 350 | -- | -- | -- | 15.8 |
| L449L | 400 | -- | -- | -- | 18 |

- Narrow V Example: 3V, 5V, 8V.
- Standard V Example: A, B, C, D section
- Do not exceed belt service factor of 1.6.
- Maximum speed reduction of 5:1
- Shaft center distance approximately equal to diameter of largest sheave
- The motor sheave should be located as close as possible to the bearing (1/2" from shaft shoulder).
- The center of the belt system should never extend beyond the end of the motor shaft.

Table 5-1

VSD Application Considerations for bearings

Shaft currents caused by VSD supply can cause damage to bearings that can result in bearing failure. The shaft currents tend to increase as the frame size increases. Siemens recommends the use of an insulated bearing on the NDE of frames 400 and larger to reduce the risk of the shaft current passing through the bearing.

Bearing Insulation, **L50** and **L51**, is a Siemens proprietary system that will use standard ball or roller bearings with an insulating composite compound between the shaft and bearing. The compound has a working temperature range of -50C up to 150C and will be permanently fixed to the shaft. *Note: Standard 6322 bearing will be reduced to 6222 with options L50 and/or L51.*

Hybrid Ceramic Bearings, **L69**, **L70** and **L71**, are a direct replacement for the standard bearing size and are fully regreasable. They utilize ceramic balls to eliminate the currents from passing through the bearings. *Note: Not available for roller bearing.*

INSOCOAT Bearings, **L61**, **L62**, **L64**, are a direct replacement for the standard bearing size and are fully regreasable. An insulated coating on the outer race of the bearing is used to reduce the risk of the currents passing through the bearing.

See [Shafts and Seals](#) for additional options to reduce bearing damage due to shaft currents.

Shafts

The standard shaft material will be C1045 or C4140 as noted in Table 6-1. C4140 shaft material is available as a custom option, **M57**, on frames with C-1045 as standard. Siemens NEMA motors are designed with the shaft dimensions and tolerances to meet the standards of NEMA MG-1 single shaft extension. Any exceptions will be noted on the motor drawings. DE shaft will have drill and tap shaft as standard as provisions for shaft locking device for shipment, see [drawings and dimensions section](#) for details.

| Frame | Standard Shaft Material |
|------------------|-------------------------|
| 444-L449 | C-1045 |
| 500 (2 Pole) | C-4140 |
| 500 (4 & 6 Pole) | C-1045 |

Table 6-1

Motors in frame 444-449 can be custom built with a double shaft extension with NDE shaft according to NEMA MG-1. This can be offered as either long shaft, **M52**, or short shaft, **M53**. See [drawings and dimensions](#) section for reference.

Keyless DE shaft extension, **K41**, is available as a custom feature. All other shaft dimensions will remain in accordance with NEMA MG-1.

Motors can be custom built with a special shaft extension on DE, **Y50**, or NDE, **Y51**. These options can be used for special dimensions of N-W, U, and keyway only and will be limited to max dimensions noted in Table 6-2. If **Y50** and **Y51** are used together the combined N-W may not exceed value noted in Table 6-2.

Any special features to shaft (special drill and tap) must be quoted by the Siemens LOW VOLTAGE MOTOR Quotation Team.

| Frame | Max U dim | Max N-W dim | Max FU dim | Max FN-FW dim | Max N-W + FN-FW |
|------------------|-----------|-------------|------------|---------------|-----------------|
| 444-L449 | 3.875" | 15" | 2.875" | 15" | 15" |
| 500 (2 Pole) | 3" | 9" | 3" | 3" | 9" |
| 500 (4 & 6 Pole) | 4.25" | CF | 3" | CF | CF |

CF = Consult Factory

Table 6-2

Seals

Shaft seals are used to protect the bearings from liquid and dust contaminants that lead to premature bearing failure. NEMA motor are equipped with v-ring shaft seals as standard on all severe duty motors unless otherwise noted. The v-ring shaft seal provides protection to meet IP55.

Labyrinth Seals (Inpro Seals, **L79**, **L80**, and **L81**) (Orion Seals, **L87**, **L88**, **L89**), are shaft rotating seals that provide extra ingress protection from water and dust while the motor is in operation. Motors that are noted to meet IEEE 841 or when IEEE 841 features, **K10**, will include labyrinth seals on both ends. The 500 frame motors will have a labyrinth seal on the DE as standard.

Shaft slinger and O-ring, **L76**, is used in shaft up applications to help reduce liquid from running down the shaft and settling in the seal area.

VSD Application Considerations for Shaft Grounding

Shaft grounding can reduce the risk of shaft currents from passing through the bearings.

This allows the current generated in the shaft to flow harmlessly to the frame and ultimately to ground bypassing the bearings in the process. Shaft grounding options are considered sparking devices and cannot be used in hazardous areas. When selected for SD products, the Division 2 information will be removed from the nameplate.

SGS™ MOTOR GROUNDING BRUSH & RING SYSTEMS, **L29**, mounts on the fan housing with a carbon brush that makes contact with the motor shaft. The carbon brush is rated at 100,000 hours before being changed. Note: Not possible in combination with **G05**, **G06**, **H04**, **M08**, or **Y51**.

Bearing Isolator + grounding brush, (MGS INPRO Seal, **L86**), uses the labyrinth sealing protection of an INPRO Seal combined with shaft grounding brushes that rest on the shaft behind the sealing mechanism. The brushes reduce the shaft currents from passing through the bearings while the seal reduces contamination build up on the grounding brushes and in the bearing. Note: This option may reduce the usable shaft length.

Feet

Motors with cast iron frame will have cast in feet as standard.

Provisions for dowel holes, **K38**, provides a hole drilled at an angle in each of the motor feet. The holes will be used as a guide for drilling the mounting plate for the addition of the dowel once the motor is aligned to the driven equipment. Dowels can be used to pinpoint the alignment of the motor to the driven equipment when the motor is taken out for service. Provisions for dowels is a standard feature on the SD200 500 frame motors.

Motors will be delivered as standard with dual/tri drilled mounting holes in the feet for increased flexibility in mounting.

Provisions for vertical jacking, **M39**, provides threads in the non-mounting holes on the feet in order that a bolt may be added for leveling of the motor during installation. Jacking provisions are required on motors that exceed 500 lbs to meet API610 requirements for horizontal pump applications.

Lifting

Horizontal cast iron motors up to L449 will be supplied with an eye bolt located in the center line of the center of gravity on the motor frame. 500 frame motors are provided with two lifting eye bolts located at opposite corners of the motor frame. They will also include alternate locations on the motor where the eye bolts can be relocated. Foot mounted motors configured for Vertical orientation, as defined in position 14 of the MLFB, will include three swivel lifting hoist ring to provide safer movement of the motor.

Fan and Fan Cover

The standard bidirectional cooling fan is non-sparking polypropylene design, unless otherwise noted. Directional fans will have polypropylene blades with metallic mounting. Bronze fans, **M10**, are non-sparking and may be used on bi-directional motors.

Bi-directional arrow, **K70**, or Unidirectional rotation arrows, **K71**, **K72**, can be added to the fan housing when a single direction of rotation is desired. Direction of rotation will be as viewed from the NDE. Note: Unidirectional arrows does not change the fan to unidirectional fan.

Metallic fan cover will be included as standard on all SD motors.

Drip cover, **K33**, can be added to the fan cover of motors used in vertical shaft down applications in order to protect the motor from water or liquids from falling directly into the fan housing. See [Drawings and Dimensions section](#) for drip cover dimensions.

Hardware

Standard hardware is grade 5 zinc plated corrosion resistant hardware. Stainless steel hardware, **L22**, includes all external nuts and bolts as well as the T-Drain and eyebolt(s). Stainless steel hardware is included with options for low ambient temperature, **B29**. Stainless steel T-drain, **L45**, will include only the drain as stainless steel.

All NEMA motors will include tapped holes on each side of the frame near the feet for frame grounding. Bronze ground bolts, **L27**, can be added (one on each side) for additional provisions.

Drain plugs require the user to unscrew the plug to allow the moisture to escape during times of idle use. T-slot drains allow for moisture to drain from the motor freely without user intervention. Crouse Hinds drains, **L46**, are UL approved breather/ drains that can be added.

Ingress Protection

The ingress protection (IP) rating is the protection grade against water and dust. The IP rating on the nameplate applies to completed motor, including shaft seals, bearing housing fits, and terminal box. The first number designation in the IP rating, IP_*, relates to the protection against water. The second number designation in the IP rating, IP*__, relates to the protection against dust. SD200 motors will have IP55 rating. Additional features can be added to increase to IP56, **L91**. SD200 841 will have IP56 as a standard feature.

Fig. 8-1

Motor Main Nameplate

SD200 Main Nameplate will be provided with data as seen in Figure 8-1.

Motor main nameplate may be modified, **Y80**, for de-rate, re-rate, deviated altitude, deviated ambient, or information added to the main nameplate. Information must be consistent with guidelines listed in catalog or applicable standards for de-rate or re-rate and within the limitations set in the ambient and altitude section. Consult Siemens LOW VOLTAGE MOTOR Quotation Team for special conditions.

Note: Siemens reserves the right to reject/hold an order based on inconsistent information or the lack of information provided for option Y80. When additional information is requested on the nameplate, it may result in standard information being displaced or removed due to space restrictions.

Auxiliary Plate

Additional information can be provided on an auxiliary plate, **Y82**, for free text provided by customer in PO. This is often used for customer tagging or customer instructions. The tag has a character limit of 40 which includes spaces and special characters. Note: Siemens will not be held accountable for free text provided by customer that is provided in the PO that proves to be inconsistent with the motor design (unless specified in a custom quotation by Siemens LOW VOLTAGE MOTOR Quotation Team).

Hazardous Area Classification

SIMOTICS Next Generation Severe Duty motors up to L449 frame will include Class I, Division 2 and Class II, Division 2 information standard on the main nameplate. 500 frame motors will include Class I, Division 2 information on the main plate and may have Class II, Division 2 added with option **M25**. *Note: M25 will also include additional features required for compliance.*

An auxiliary plate, **M22**, may be selected that contains additional details with Zone 2 data as seen in Figure 8-2.

Division 2 information will not be included when one of the following options are selected: **H04, G05, G06, L29, L86** or any other feature that may be deemed as a sparking device.

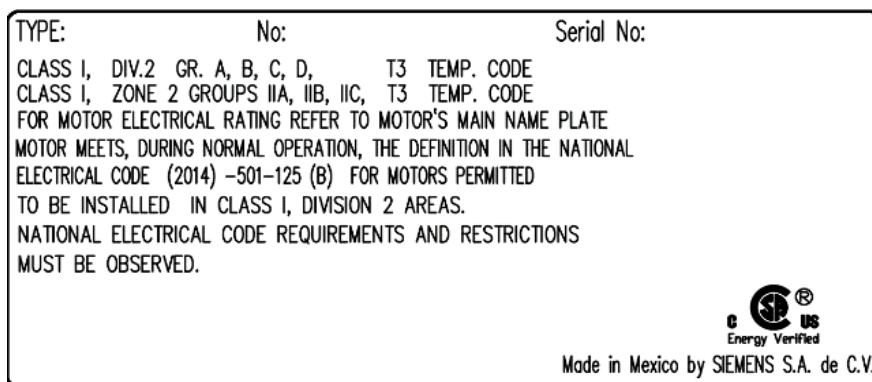

Fig. 8-2

Standard Ambient and Altitude

Severe Duty NEMA motors are suitable for operation at an altitude up to 3300 feet (1000 meters) above sea level with an ambient temperature range of -25C to 40C with 1.15 service factor as standard.

Increased Ambient or Altitude

Altitude can be adjusted up to 9900 feet or Ambient can be adjusted up to 55C with a reduction in service factor to 1.0 using **Y80** option code.

Motors with Class H insulation may be re-nameplated for up to 50C ambient with 1.15SF and Class F temp rise.

Altitude may also be increased with reduction in ambient per Figure 9-1.

For altitude above 9900 feet or ambient above 55C please contact the Siemens LOW VOLTAGE MOTOR quotation team.

| Maximum Altitude | Maximum Ambient |
|------------------|-----------------|
| 3300 ft (1000m) | 40°C (104°F) |
| 6600 ft (2000m) | 30°C (56°F) |
| 9900 ft (3000m) | 20°C (68°F) |

Table 9-1

Low Ambient Conditions

Ambient temperatures below -25C can cause standard grease to become ineffective and some standard metals to become brittle leading to motor failure or damage. Features for low ambient conditions can be added as custom build, **B27** for down to -30C, **B28** for down to -40C, **B29** for down to -50C, include special grease, external hardware, shaft material, lead material, and seals for suitability for the low temperatures.

Vibration Monitoring

Provisions for vibration sensors, **A67**, will provide 1/4"–28 UNF drilled and tapped holes on each bearing housing when selected with no additional instruction. This option can also be adapted to the required drill and tap required for a customer specified vibration sensor with quote from LOW VOLTAGE MOTOR quotation team. DP200 HPS motors in 500 frame will have provisions for vibration sensors as a standard feature.

Metrix vibration sensors, **A68**, includes the provisions and install of one ST5484E (4-20 MA) transmitter on each end of the motor.

Encoders

DYNAPAR HS35R, **G05**, is a hollow shaft rotary pulse 1024 PPR encoder with single output. It is mounted on an NDE shaft extension that extends beyond the fan housing. It is held in place with an arm that is attached to the fan housing. DYNAPAR SLIM Tach ST85, **G06**, is a c-face mounted 1024 PPR encoder with single output. Note: Encoder options will remove hazardous area information from nameplate.

Additional Cooling for VFD Applications

External Force cooling, **M08**, can be added to severe duty motors for increased turndown on VSD applications. The blower motor voltage & applicable order codes like a special paint, rotation arrow, box position, etc. will follow the drive motor. The blower kit will include a secondary connection box located on the fan housing. See [Dimensions Section](#) for added length.

Standards

IEEE 841 Features, **K10**, adds the applicable features of IEEE 841 to the motor. This option is only available for frame size 500 motors. Motors over 500 HP fall outside the scope of IEEE 841 and will be nameplated with "IEEE 841 Features."

Balance

SD200 motors up to L449 frame are dynamically balanced to commercial limits measure in accordance with NEMA MG1-12.06. Precision and Extra Precision balance, **M69**, **M70**, provides more stringent balancing guidelines. FS500 motors will have extra precision balance as standard. See [Technical Tables](#) for balance values.

Packaging

Frames 280 and larger will be bolted to an open wood pallet and wrapped in plastic to protect the finish. See standard packaging weights in dims in [drawing section](#).

Export packing, **B09**, the motor will be secured into a fully enclosed wood crate. See Export box weights and dimensions in [drawing section](#). Special packing, **B11**, will include B09+shock and tilt sensors.

Shipping weights and dimensions can be calculated using the standard packing weights and dimensions table combined with the motor information. The weights and dimensions listed in the tables do not include the weight and dimensions of the motor unless otherwise noted.

Paint

NEMA motors as standard are protected against corrosion (C2 category) and external influences with high-quality coatings based on (Alkyd Modified + Epoxy). If a higher corrosive class is required, a special paint system must be included.

Paint color will be RAL7030 as standard. Special paint color, **Y60**, **Y61**, may be added for other RAL color. Note: **Y61** may only be used with one of the special paint systems (**N01**, **N02**, **N05**, **N06**, **N07**)

Motors can be provided with primer only, **N03**, to allow the customer to apply their own final paint in the field.

The 2 Parts Epoxy paint system, **N01**, offers excellent resistance to the corrosive action of chemical agents, prolonged weathering and to the action of direct sunlight.

The 3 Parts Epoxy paint system, **N02**, is an organic base of Epoxy Zinc, provides a high resistance to humid environments (saline or no-saline) but not for offshore ocean climate, excellent inhibitory capacity to corrosion, excellent resistance to abrasion, high temperatures (ambient temperatures > 59°C) and to the most of industrial solvents (splashes). This Paint System is recommended to apply in high relative humidity environments (>60%).

2 Parts Epoxy paint system, **N06**, offers the same level of protection as **N02** at a reduced price and shorter process time.

The 3 parts epoxy (Coastal-Offshore High Salt) paint system, **N05**, is recommended for offshore installation, provides good chemical resistance to splash/spillage, fumes and immersion in neutral, fresh and salt water. Effectively protects the motor from corrosion resulting from industrial and marine exposures as it is safeguarding the environment.

2 Parts Epoxy paint system, **N07**, offers the same level of protection as **N05** at a reduced price and shorter process time.

See [Technical Tables](#) for additional details.

Siemens offers much of our documentation and certificates for download through our online DT-Configurator tool. This allows the data to be tailored to the motor configuration.

In addition to our online documentation we also offer a wide variety of order specific documentation through order codes as individual documents or as documentation packages. Ordered documents be provided in Siemens standard electronic format unless otherwise noted.

Information that is proprietary to Siemens will not be included in documentation supplied.

Drawings

Motor drawings can be provided in either pdf or CAD formats as specified in the purchase order. The standard drawing, **F42**, can be used for a standard F1 configuration with no special options. This drawing is also available for download through the [DT-Configurator](#).

The non-standard drawing in pdf format, **F43**, or in CAD format, **F48**, can be used for motors with mechanical modifications that would add on accessories or change the standard dimensions of the motor.

Conduit box drawing, **F44**, can be used for a standard conduit box drawing and auxiliary boxes.

Shaft Profile Detail, **F51**, provides a shaft profile drawing with limited dimensions and shaft material data.

Curves

Standard performance curves, **F03**, will include the motor calculated speed torque curve and calculated performance curve (Efficiency, Power Factor, and Amps Over percent of rated horsepower) at rated voltage. This curve is also available for download through the DT-Configurator.

Stall Time Curve, **F40**, is a logarithmic curve of current (in present of full load) over time. The curve will be shown for both hot and cold conditions and graphically illustrates the safe stall time.

Curves at 100% and 80% voltage, **F07**, will include speed torque curve and performance curves.

Data Sheets

Typical Data sheet, **F49**, will provide an electrical data sheet for the motor ordered in Siemens standard format.

Customer specific data sheet, **F50**, provides the customer with the project data sheet filled out by Siemens engineering. The customer data sheet must be supplied in excel format at the time the purchase order is placed.

Special Calculations and Reports

Acceleration time calculation, **F04**, will be calculated based on the load inertia value provided by the customer. The inertia value must be provided with the PO.

Polarization Index, **F05**, provides a reference winding impedance to gauge deterioration of the winding insulation.

Shaft Torsional Analysis, **F08**, provides motor shaft torsional data for each step on the shaft.

Bearing L10 calculation, **F09**, calculates the estimated life of the bearings based on customer supplied application details. See [bearings](#) section for minimum application details required.

Other Documentation

Documentation and nameplates can be provided in Spanish, **D05**. This option will also include NOM on the nameplate.

Certificate of compliance, **F00**, can be issued to certify compliance with ISO standards.

Certificate of origin stamped by the Chamber of Commerce, **F01**, can be required when motors are exported for select countries.

Inspection Test Plan, **F70**, provides formal documentation of the factory standard tests and inspections.

Wiring diagram, **F45**, will provide a pdf copy of the motor wiring diagram for the motor ordered. This document is also available for download through the DT-Configurator.

Instruction and Operation Manual, **F46**, is general instructions for installation, operation and maintenance for NEMA motors.

This document is also available for download through the DT-Configurator.

Replacement parts list, **F47**, will provide part numbers and general descriptions for the following spare parts:

- Bearings, Fan, Fan housing, Conduit Box, Bearing housings (flange if applicable), and seals

Visual inspection Proof, **F60**, provides up to 8 photos of the motor prior to shipment. Photos will include nameplate and tagging, at least 3 views of overall motors, and detail special features.

Paint Report, **F71**, provides a measure of paint thickness and overall paint adherence.

Additional specialized documentation and calculations may be offered by the factory through the Siemens LOW VOLTAGE MOTOR quotation team.

Documentation Packages

Order specific documentation packages provide many of the common documents required for special projects and OEMs packaged into a zip file. Additional documentation options may be added with order codes as required by the project.

Advanced Document Package, **F81**, will include:

- (F46) Instruction Operation Manual
- (F00) Certificate of Compliance
- (F49) Data Sheet
- Nameplate Drawing
- (F45) Connection Diagram
- (F07) Speed vs Torque / Current Curve and Performance Curve (at 80% and 100% Voltage)
- (F47) Spare Parts List
- (F43) Outline Drawing (pdf)

Project Documentation Package, **F82**, will include:

- (F46) Instruction Operation Manual
- (F00) Certificate of Compliance
- (F49) Data Sheet
- Nameplate Drawing
- (F45) Connection Diagram
- (F07) Speed vs Torque / Current Curve and Performance Curve (at 80% and 100% Voltage)
- (F47) Spare Parts List
- (F43) Outline Drawing (pdf)
- (F48) CAD Dimension drawing
- Thermal Limit Curve (at 80% and 100% Voltage)
- (F44) Terminal box drawing
- (F50) Customer specific data sheets
- (F70) ITP
- Hazardous Area Certs (UL or CSA)
- Details of Paint System

Routine Test, F10, F12

Routine test consists of the following items tested in accordance with IEEE standard 112.

- No Load Current
- No Load Speed
- Nominal Current at Locked Rotor
- Winding Resistance
- High Potential
- Bearings/Vibration Check

Routine Test with vibration, F20, F22

Includes all tests from standard routine test with additional records of vibration testing. A hard copy of the Routine Test with vibration is included on all IEEE 841 compliant motors, adding **F20** will get you the test report in electronic format.

Test report of routine test is based on IEEE Std. 112 Form A-1 and includes complete nameplate information.

Electrical Duplicate Routine Test, **F36**, is an electronic copy of a test report of the same electrical design as the motor on order.

Noise Test, F30, F32

Motors are tested according to IEEE 85 standard in unloaded condition only. Test report will be provided with Sound Pressure (L_p) and sound power (L_w) in octave bands of 125Hz, 250Hz, 500Hz, 1kHz, 2kHz, 4kHz, and 8kHz.

Complete Test, F15, F17

Complete test consists of the following items tested in accordance with NEMA and IEEE-112 test standards.

- Full Load Heat Run
- Temperature Rise at F.L.
- Winding Resistance
- Rated F.L. Slip
- No Load Current
- Breakdown Torque
- Locked Rotor Torque-Amps
- High Potential Tests
- Efficiencies @ 100, 75, 50 Percent Load
- Power Factor @ 100, 75, 50 Percent Load

Test report of complete test is based on IEEE Std. Form A-2 and includes complete nameplate information.

Electrical Duplicate Complete Test, **F37**, is an electronic copy of a test report of the same electrical design as the motor on order.

Performance Load Test, F27

Performance Load Tests the motors at select points from 0-125% of the rated load recording speed, torque, current, power factor and efficiency, at rated voltage. Data is curve plotted, on Siemens standard format. Foot mounted motors only.

Conversation Calculations**Power:**

$$\text{Power (KW)} = \frac{\text{Torque (Nm)} \times \text{Speed (RPM)}}{9548.8}$$

$$\text{Power (HP)} = \frac{\text{Torque (Lb-Ft)} \times \text{Speed (RPM)}}{5250}$$

$$\text{KW} = \text{HP} \times 0.746$$

$$\text{HP} = \text{KW} \times 1.341$$

Torque

$$\text{Lb-Ft} = \text{Nm} \times .7376$$

$$\text{Nm} = \text{Lb-Ft} \times 1.359$$

Temperature

$$^{\circ}\text{C} = (^{\circ}\text{F} - 32) \times 5/9$$

$$^{\circ}\text{F} = (^{\circ}\text{C} \times 9/5) + 32$$

Inertia

$$\text{Lb. Ft.}^2 = \text{kgm}^2 \times 23.73$$

$$\text{Kgm}^2 = \text{Lb. Ft.}^2 \div 23.73$$

$$\text{Lb. Ft.}^2 = \text{GD2 (kgfm}^2) \times 5.933$$

Typical Control Settings for temperature monitoring devices

Introduction

Siemens SIMOTICS Next Generation Severe Duty motors are designed and built to operate under harsh environments in the industry, including but not limited to petrochemical, pulp and paper mills and waste-water treatment. With an expanded configurations and options, this motor will be ideal for diverse applications... Fans, Compressors, Pumps, Conveyors, Hoists, Winders to name a few. These motors are design to meet or exceed the NEMA Premium® efficiency and also available in NEMA Super Premium® efficiency³⁾ as well as the most stringent industry standards IEEE 841. Built for long, trouble-free life, they are backed up by a 3-year warranty for SD200 and 5 year warranty for SD200 841.

- 4) FS500 with option M25
- 5) See Technical Tables for more details

Frame and End Shields

The SIMOTICS Severe Duty motor, SD200, and SD200 841, feature cast iron frame, end shields, and an easy-to-access, diagonally-split, oversize terminal box; the terminal box is provided with a neoprene gasket and includes a heavy-duty ground lug and non-wicking clearly and permanently marked leads. These characteristics, its high strength zinc-plated hardware, epoxy paint and stainless steel nameplate provide exceptional structural integrity and resistance to rust and corrosion, making them suitable for severe duty applications in harsh environments.

Rotor and Stator Windings

A unique offset rotor bar design provides improved efficiency, while larger bars and end rings reduce resistance for lower rotor losses. Each die cast aluminum rotor assembly is dynamically balanced for extended bearing life and includes a high-strength carbon steel (C1045) shaft for maximum rotor performance.

The stator is manufactured with premium electrical C5 grade steel lamination and copper electrical magnet wire that furthers the reduction in losses.

Insulation

The proprietary Class H non-hygroscopic insulation system is rated for 180 deg C, NEMA Class B temperature rise, providing extra margin of thermal life. The varnish system application ensures maximum wire penetration to provide protection from moisture, corrosion and electrical shock. This insulation system meets or exceeds NEMA MG1 2014 Part 31 making the motors suitable for variable speed drives in constant torque (as noted) and variable torque (20:1). All windings are tested for CIV.

Cooling System

A non-sparking, bi-directional fan is locked and keyed to the shaft. Its low-inertia design reduces windage losses, improves airflow, reduces noise and provides dependable cooling. Cast Iron fan covers are provided for all frames sizes.

Bearings

Single shielded bearings are used for better bearing protection against contaminants.

Introduction

Siemens Definite Purpose Motors are designed and built to operate under harsh environments in the industry, including but not limited to petrochemical, pulp and paper mills and waste-water treatment. DP200 HPS motors have all the quality features of the SD200 with additional key features that are key in the Horizontal Pump Systems motors. A wide selection of options, among them bearing isolator and ceramic bearings on drive end, make these motors suitable almost any requirement. The construction of these motors is backed up by its three year warranty and 5 years when order with IEEE841 features.

| Performance Specification | | |
|---------------------------|---------------------------------|--|
| | | DP200 HPS |
| HP Range | 3600 RPM | 450-800 |
| Frame Size | | FS 509-5013S |
| Standard Voltage | 460V, 575V | FS 509-5013S |
| Efficiency | NEMA Premium® (MG1-Table 12-12) | FS 509-5013S |
| Service Factor | 1.15 @ 40°C | FS 509-5013S |
| Insulation | Non-Hygroscopic | Class H |
| Temperature Rise | Class B | @ 1.0SF |
| | Class F | @ 1.15SF |
| Conduit Box (Oversized) | Oversized | Cast Iron |
| Fan Cover | | Metallic |
| Cooling Fan | Bi-Directional | Polypropylene |
| Rotor | Die Cast Aluminum | FS 509-5013S |
| Ingress Protection | NEMA | IP55 |
| Hazardous Location | Gas | CL 1, Div 2 Gr. A,B,C or D Temp Code T3 |
| | Inverter Duty | Variable Torque 20:1 |
| | | Constant Torque CT 3:1 |
| | | 700-800 HP |
| | | |

| Key Features | |
|---------------------|--|
| Bearings | Provisions for Bearing RTDs (RTDs added with option A50) |
| | Insulated NDE bearing |
| Vibration detectors | Provisions for vibration detectors on each bearing housing |

Frame and End Shields

Definite purpose motors feature cast iron frame, end shields and an easy to access, diagonally split, oversize terminal box; the terminal box is provided with a neoprene gasket and includes a heavy duty ground lug and non-wicking clearly and permanently marked leads. These characteristics, its zinc-plated hardware, epoxy paint and stainless steel nameplate provide exceptional structural integrity and resistant to rust and corrosion, and make them suitable for severe duty applications in harsh environments

Rotor and Stator Windings

A unique offset rotor bar design provides improved efficiency, while larger bars and end rings reduce resistance for lower rotor losses. Each die cast aluminum rotor assembly is dynamically balanced with half key for extended bearing life and includes a high-strength steel (C4140) shaft for maximum rotor performance.

The stator is manufactured with premium electrical C5 grade steel lamination and copper electrical magnet wire that reduce losses.

Insulation

The proprietary Class H non-hygroscopic insulation system, NEMA Class B temperature rise, provides an extra margin of thermal life. The varnish system application ensures maximum wire penetration to provide protection from moisture, corrosion and electrical shock. This insulation system meets or exceeds NEMA MG1 2014 Part 31 making the motors suitable for variable speed drives in constant torque (3:1, 2:1) and variable torque (20:1). All windings are tested for CIV.

Cooling System

A non-sparking, bi-directional fan is locked and keyed to the shaft. Its low-inertia design reduces windage losses, improves airflow, reduces noise and provides dependable cooling. Metal sheet fan covers are provided for all frames sizes.

Bearings

DP200 HPS motors have 63 series bearings on both ends with Insulated shaft on NDE as standard to help minimize bearing failure due to shaft currents. (INSOCOAT bearing on NDE prior to January 2021)

*Stator RTD's 100 ohm platinum w aux box-terminal strip 2/phase

NEMA Premium is a certification mark of the National Electrical Manufacturer's Association.

QuikMOD Delivery is for stocked motors only.

Siemens offers a wide selection of options to increase the suitability of our motors to the specific customer needs.

Modified Stock Options:

QM = QuikMOD – 2-3 days modification

MOD = Modification – 10 days modification

Note: Modification times are dependent on availability of materials

Custom Build Options:

Case A-1: Base Custom Delivery

Case A-2: One additional week

Case B: Three additional weeks

Note: See Weekly Stock List for updated lead times on delivery cases

Definitions:

MLFB Digit – Modifications or Custom features that are built into the motor part number (MLFB).

Short Codes – Modifications or Custom features that are added after the part number.

Ordering Instructions:

1. Select a stock motor from the **Motor Selection and Pricing Section**. (Note Part Number)
2. **Verify applicability of desired Option(s) at the end of the section.** (Per motor type and frame)
3. **Select applicable Option(s).**
4. **Construct new Part Number and List Price.** (See example below)
 - a. If the MLFB Position is 12, 13, 14, 15 or 16, replace the number(s) or letter(s) at the same position(s) in the stock motor **Part Number** with the **MLFB Code**.
 - b. If the option is a **Short Code**, then add a **'-Z'** to the end of the motor **Part Number** and add the **short code**. Then add a **'+' sign** followed by the **additional short Code(s)**.

Custom Options combined with QuikMOD Motor Pricing Example:

Example: 150HP, 1800RPM, 460V, 445T, SD200, C-face with feet, PTC thermistors with Aux box on DE in F2 position.

| | | |
|---------------------------|-----------------|--|

[Pricing](#)

Voltage

LV NEMA motors can operate from 200-600V according to the winding selection. Windings up to 230V can only be applied to motors with 75HP or less.

Part-Winding-Start and Wye-Start/ Delta-Run are special windings that help to limit the amount of inrush current at startup. Both options require a special motor starter to operate correctly.

Special voltage, **M2Y**, can be used for any voltage within the voltage range listed for each.

When used for 50HZ operation the service factor will be 1.0 with the standard HP output. Electrical Data must be calculated and provided by the factory when **M2Y** is selected. For 50HZ operation at 1.15 S.F. derate to the next smaller HP can be requested with option **Y80** (see [Rating Plates and Tagging](#) section).

AC NEMA motors are designed with the following tolerances in accordance with NEMA MG-1:

Voltage tolerance: +/-10% of rated voltage

Frequency tolerance: +/- 5% of rated frequency

Voltage & Frequency combined tolerance:
+/-10% (sum of absolute values)

Winding Connection:

140-250 Frame :

Y for single voltage and YY/Y for dual voltage

280 frame and up:

Δ for single voltage and Δ Δ / Δ for dual voltage

440T frames with 3 lead connection may have paired leads for flexibility in connection. Figure 2-3

See [Terminal Box and Leads](#) section for additional information on motor leads.

C-Face Foot Mount

D-Flange Foot Mount

Vertical with Drip Cover

Flange Mounting

The drive end bearing housing can be replaced with flange mounting for direct coupling to the driven equipment. Flanges can be supplied with or without feet and as vertical or horizontal as required by the application. S449 frame must use the motor feet as support with flange mounting in either vertical or horizontal mounting positions.

C-Face

The NEMA C-face has threaded holes in the flange and the mounting hardware will be introduced from the driven equipment side. The C-face can be added to a stock motor as a modification where applicable.

CH flange is a standard C-face design in the next smaller size. The CH flange is only available for XP motors in frame size 180.

D-Flange

The NEMA D-flange will have through holes that are unthreaded. The D-Flange can be added to stock motors 140-250 frame as a modification where applicable and can be built as custom on all frames. Note: D-flange is not available on XP motors in frames 140-250.

Notes:

- D-Flange modification on frames 280-449 will result in non-standard usable shaft length when modified from stock.
- D-flange is not available on XP motors in frames 140-250.
- Round frame motors are only stocked in frames 140-250 and can be custom built up to 449 frames.

Winding Insulation

Siemens NEMA stator is random wound and insulated with Class F insulation system which is compliant with NEMA MG-1 part 31 and is rated for 155 deg C. Spike resistant wire, **C03**, can be used to meet those more stringent specifications that require part 31 to be exceeded. The stator is protected from moisture with acrylic impregnation through a dip and bake process. The stator is designed to have a temp rise no greater than class B at nameplate horsepower.

Class H insulation, **C00**, is rated for 180 deg C and may be used to better protect the stator when the temp rise may be higher due to ambient conditions or harsher VSD applications. With Class H insulation the lead material will remain Class F.

Moisture Powerhouse (extra dip and bake), **C04**, adds an extra layer of varnish to the winding for added protection against moisture. Vacuum Pressure Impregnation (VPI), **C01**, is an alternative to the standard dip and bake process. VPI uses a vacuum system to pull the varnish into the winding to reduce air bubbles in the varnish. Fungus protection, **C07, C08**, is an anti-fungal spray that is applied to the windings after the dip and bake process to help reduce fungus from growing on the windings during storage prior to operation.

Space Heaters

Space heaters help to reduce the humidity inside the motor during idle times of operation and storage. Siemens uses flexible silicone rubber space heaters that have been proven to provide long life which either meets or exceeds the overall life of the AC induction motor. Space heaters will have wattage corresponding to the voltage and motor size as seen in Table 4-2 and will have leads to the main box as standard or an aux box as an option with leads marked per Figure 4-1.

Siemens now offers low temp space heaters rated for a max surface temperature of 160 deg C for use in safe area, Division 2, or Division 1 certified motors. The heaters can be configured for operation on 115V supply, **A46**, 230V supply, **A47**, or dual rated for 115/230V supply, **A48**.

Space Heater information plate will be included when space heaters are added to the motor.

Table 4-1

Winding temperature protection

Thermostats, **MLFB Position 15 "G" or "T"**, are supplied as normally closed. When the temperature of the motor reaches the rated temperature of the device, the switch will open and cause a trip condition. Thermostats will have leads to the main box as standard or an aux box as an option with leads marked per Figure 4-2.

Fig. 4-2

PTC (positive temperature coefficient) thermistors, **MLFB Position 15 "B or C"**, are resistive devices that increase in resistance as the temperature increases. They are set to jump to a very high resistance at a rated temperature. Options are available to have one per phase for trip only, "B", or two per phase for alarm and trip, "C". PTC thermistors will have leads to the main box as standard or an aux box as an option with leads marked per Figure 4-3 and Figure 4-4.

Fig. 4-3

Fig. 4-4

Stator RTDs, **MLFB Position 15 "K"**, are PT100 resistive thermal devices that can be used to monitor the temperature of the motor based on the measured resistance of the device. The resistance range will be 100 ohms at 0 degrees C and increase at a rate of .385 ohms per degree C. RTDs are supplied with two sets per phase (one set active and one set as spares) embedded in the DE end turn of the winding. This option also includes an aux box with a terminal strip with terminals marked per Figure 4-5.

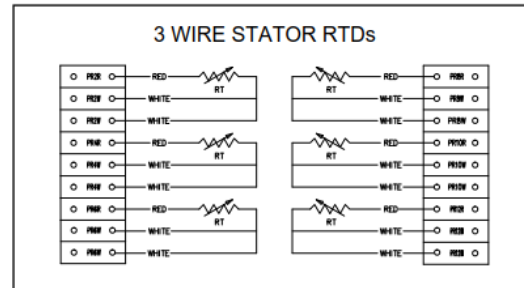

Fig. 4-5

PT1000 sensors, **MLFB Position 15 "P"**, function like the PT100 stator RTDs. The resistance range for the PT1000 sensors is 1000 ohms at 0 degrees C and increases at a rate of 3.85 ohms per degree C. This option comes with two independent sensors (one active and one spare) embedded in the DE end turn of the winding. PT1000 sensors will have leads to the main box as standard or an aux box as an option with leads marked per Figure 4-6.

[Pricing](#)

Main Terminal Boxes

The main conduit box is diagonally split with a single entrance hole (see drawing section for standard entry hole size) with internal grounding lug provided as standard. The standard terminal box will have a volume that is greater than required by NEMA/NEC.

| Terminal Box Material | | |
|--------------------------|---------|---------------|
| Motor Type | Frame | Material |
| GP, GPA | 140-250 | Aluminum |
| GP | 280-400 | Stamped Steel |
| GP | 440 | Cast Iron |
| SD, XP, Definite purpose | All | Cast Iron |

Table 5-1

Cast iron terminal box is available as an option, **L01**, on general purpose motors that are supplied with stamped steel box as standard. Explosion proof motors have special round style, cast iron explosion proof terminal box with a rabbet fit cover. Severe Duty motors will be supplied with a gasket between conduit box and frame and between cover and base. Oversized steel box, **T04**, is available with the blank entry. See [drawings and dimensions section](#) for additional details.

The main terminal box position is defined by the 16th position of the MLFB. Foot mounted Cast iron frame motor in 1LE2, 1MB2, 1PC2 can have the terminal box located on the left or right of the frame only (Reference Figure 5-1). GP100A motors have the option for top mounted terminal box. The connection entry will be facing the motor feet as standard and can be rotated in 90-degree increments in the field or by ordering with options **J84, J85, J86**. Round Frame motors (without feet) will have the terminal box positioned in relation to the motor condensation drains (drains will be in the lowest position). Auxiliary boxes will be rotated in the same direction as the main box.

Figure 5-1

Auxiliary Boxes

Auxiliary terminal boxes are available for accessories included in the motor selection. The auxiliary box can be attached to the motor frame or to the side of the main terminal box. Aux box, **Jx3**, **Jx5**, will be a cast iron auxiliary box. Condulet, **Jx0**, **Jx2**, **Jx4** is an aluminum electrical condulet with a steel cover. The explosion proof condulet, **Jx6**, **Jx7** is a UL approved explosion proof box that has a fully threaded cover.

Jx0 will be on opposing end to main box for frame

size S449. The auxiliary box option should be selected according to the accessory that it will be paired with. Stator RTDs will come with an aux box with a terminal strip included as standard. The aux box will be on the opposite to main for the 1LE2, 1MB2, and 1PC2 motors. Bearing RTDs, **A51**, does not require an auxiliary terminal box, as it comes standard with terminal heads on each bearing housing (S449 will have a single auxiliary box).

| | PTC Thermistors | Thermostats | PT1000 Sensors | Space Heaters |

Figure 5-3

Terminal Leads

All NEMA motors come standard with flying leads (no terminal block) terminated using ring terminals. The leads are Class F insulated and identified with permanent marking. Terminal block, **K83**, is available on motors up to 360 frame and only with 3 leads. As standard terminal leads will be of sufficient

length to execute the termination to the power leads inside the terminal box. Special cable length, **Y85**, is available on 1LE2 and 1PC2 severe duty motors and may be used to extend the leads up to 120" outside of the motor frame.

Lubrication

Standard lubrication for All Siemens LV NEMA motors is EXXONMOBIL POLYREX EM (Polyurea-based grease).

MOBIL 28 Grease, **L57**, has a wide temperature range with a clay base thickener ideal for low ambient conditions down to -50C. This option is supplied as standard for low ambient option codes **B27**, **B28**, and **B29**.

MOBILITH SCH 100, **L58**, is a Lithium base alternative to our standard POLYREX EM.

Grease inlet (Alemite fitting) is standard on GP100 in frame 280 and larger, and all SD, XP, and DP NEMA products. Grease fittings are not possible on the GP100A product line. SD100 IEEE motors include Alemite and automatic grease relief fittings as standard, **L60** option is available for other severe duty motors.

Oil mist ready, **L55**, and Provisions for oil mist, **L54**, are possible on Severe Duty motors (SD100/SD100IEEE) 280 to 440 Frames and SD10MS 280 to 440 Frames Horizontal Foot Mount only.

Bearings must be single shield ball bearings with shields to inboard side. Motor leads are sealed to prevent mist from entering conduit box and lead material used is resistant to oil mist. Oil mist ready will only have enough grease in the bearings to complete the routine test. Provisions for oil mist will be supplied with grease in the bearing housing which must be expelled prior to switching to oil mist lubrication. Motors with oil mist options will not have grease fittings or grease relief.

Sealed Bearings, **L68**, are greased for life bearings and will not require re-lubrication. Sealed bearings with IEEE 841 will result in the motor labeled as "IEEE Std 841-2021 Features".

Bearings

Siemens standard re-greasable bearings have an L10 bearing life of 100,000 hours for direct coupled applications and 50,000 hours for belted applications when properly sized for the application and with proper maintenance. See [Technical Tables](#) section for standard bearings sizes and with option **L65**.

Vertical solid shaft motors, HP100 and LP100, thrust values are published with a bearing life of one year. Extra High Thrust, **K21**, changes the NDE thrust bearings to tandem configuration on the LP100 to allow for more down thrust to be considered (see [Technical Tables](#)). API 610, **K20**, does not allow for bearings in tandem and cannot be used with **K21**. With API610 the thrust bearing must be located on the NDE and have a minimum bearing life of 3 years. See thrust values for 3 year bearing life in [Technical Tables](#).

Bearing Temperature Protection

Bearing RTDs, **A51**, included temperature monitoring on both the drive end and non-drive end bearing. The bearing housing is drilled and tapped for the temperature probe to rest on the outer race of the bearing with the leads in a terminal head on each end (Fig. 6-1). This allows for independent temperature monitoring for each bearing.

Fig. 6-1

Overhung Load/Belted Considerations

Siemens recommends a roller bearing, **L65**, on the DE for overhung load applications. Roller bearing on DE is standard on SD661 product line and on select 440 frame and up as noted in Table 6-1.

Belting details can be evaluated, **F09**, by Siemens Engineering on request. The belting form can be requested through the Siemens LOW VOLTAGE MOTOR Quotation Team. Minimum criteria for belting evaluation is listed below and cannot be properly evaluated without this data.

- Operating Application Horsepower (Can be less than the rated motor HP)
- Operating RPM
- Frame size of selected motor
- Dr = Motor Sheave Diameter (Must be within Table 6-3)
- Dn = Driven Sheave Diameter
- Number of belts
- Type of Belts (e.g. 3V, 5V, 8V, A, B, C, etc.)
- C = Distance between sheaves (center to center)
- L = Distance from center of motor sheave to end of shaft
- Orientation of motor (Horizontal/Vertical shaft up/Vertical shaft down)
- Ws = Face width of motor sheave

Fig. 6-2

| Recommended Sheave Diameters for V-belts | | | | | |
|--|--------------------|------|-----|--------------------------------------|------------------------------------|
| Frame | HP Synchronous RPM | | | Standard V Minimum Diameter (in.) | Narrow V Minimum Diameter (in.) |
| | 1800 | 1200 | 900 | | |
| 364T | 60 | -- | -- | 7.4 | 7.4 |
| 365T | 75 | -- | -- | 9 | 8.6 |

| 405T | 100 | -- | -- | 10 | 8.6 |
| 405T | -- | 75 | 60 | 10 | 10 |
| 444T | -- | 100 | -- | 11.8 | 10 |
| 444T | -- | -- | 75 | 13 | 9.5 |
| 444T | 125 | -- | -- | 12 | 10.5 |
| 445T | -- | -- | 100 | 15 | 12 |
| 445T | -- | 125 | -- | 15.2 | 12.4 |
| 445T | 150 | -- | -- | 13.2 | 10.5 |
| 447T | -- | 150 | -- | 16.1 | 11.6 |
| 447T | -- | -- | 150 | 24.7 | 14.6 |
| 447T | 200 | -- | -- | 15.8 | 13.2 |
| 449T | -- | 200 | -- | 25 | 14.6 |
| 449T | -- | -- | 200 | -- | 18 |
| 449T | 250 | -- | -- | 18.4 | 13 |
| 449T | -- | 250 | -- | -- | 18.2 |
| S449LS | -- | -- | 250 | -- | 19.8 |
| 449T | 300 | -- | -- | 24.8 | 15.4 |
| S449LS | -- | 300 | -- | -- | 18.4 |
| S449LS | 350 | -- | -- | -- | 15.8 |
| S449LS | -- | 350 | -- | -- | 21 |
| S449LS | 400 | -- | -- | -- | 18 |

- Narrow V Example: 3V, 5V, 8V.
- Standard V Example: A, B, C, D section
- Do not exceed belt service factor of 1.6.
- Maximum speed reduction of 5:1
- Shaft center distance approximately equal to diameter of largest sheave
- The motor sheave should be located as close as possible to the bearing (1/2" from shaft shoulder).
- The center of the belt system should never extend beyond the end of the motor shaft.

Table 6-3

VSD Application Considerations for bearings

Shaft currents caused by VSD supply can cause damage to bearings that can result in bearing failure. The shaft currents tend to increase as the frame size increases. Siemens recommends the use of an insulated bearing on the NDE of frames 400 and larger to reduce the risk of the shaft current passing through the bearing.

Insulated Bearings, **L66** and **L67**, use a non-conductive insulating sleeve inserted into the bearing housing. This option is effective in reducing the shaft currents and uses sealed bearings making the bearings non-regreasable. Note: Not available for roller bearing on DE or load bearing on NDE (LP100). Not to be used with Bearing RTDs, **A51**.

Hybrid Ceramic Bearings, **L69**, **L70** and **L71**, are a direct replacement for the standard bearing size and are fully regreasable. They utilize ceramic balls to eliminate the currents from passing through the bearings. Note: Not available for roller bearing on DE or load bearing on NDE (LP100).

INSOCOAT Bearings, **L61**, **L64**, are a direct replacement for the standard bearing size and are fully regreasable. An insulated coating on the outer race of the bearing is used to reduce the risk of the currents passing through the bearing. Note: Not available for load bearing on NDE (LP100).

See Shafts and Seals for additional options to reduce bearing damage due to shaft currents.

[Pricing](#)

Shafts

The standard shaft material will be C1045 or C4140 as noted in Table 7-1. C4140 shaft material is available as a custom option, **M57**, on frames with C-1045 as standard. Siemens NEMA motors are designed with the shaft dimensions and tolerances to meet the standards of NEMA MG-1 single shaft extension. Any exceptions will be noted on the motor drawings.

| Frame | Standard Shaft Material |
|---------|-------------------------|
| 140-449 | C-1045 |
| S449 | C-4140 |

Table 7-1

Motors can be custom built with a double shaft extension with NDE shaft according to NEMA MG-1. This can be offered as either long shaft, **M52**, or short shaft, **M53**. See drawings and dimensions for reference.

Motors can be custom built with a special shaft extension on DE, **Y50**, or NDE, **Y51**. These options can be used for special dimensions or special shaft features (ex: drill and tap, threaded shaft, special keyway, etc.) and must be quoted by the Siemens LOW VOLTAGE MOTOR Quotation Team.

Keyless DE shaft extension, **K41**, is available as a custom feature. All other shaft dimensions will remain in accordance with NEMA MG-1 (unless otherwise noted in drawing).

Seals

Shaft seals are used to protect the bearings from liquid and dust contaminants that lead to premature bearing failure. NEMA motors are equipped with v-ring shaft seals as standard on all General Purpose motors and severe duty motors unless otherwise noted. The v-ring shaft seal provides protection to meet IP55.

Labyrinth Seals (Inpro Seals, **L79**, **L80**, and **L81**) (Orion Seals, **L87**, **L88**, **L89**), are shaft rotating seals that provide extra ingress protection from water and dust while the motor is in operation. Motors that are noted to meet IEEE 841 or when IEEE 841 features, **K10**, will include labyrinth seals on both ends.

Shaft slinger and O-ring, **L76**, is used in shaft up applications to help reduce liquid from running down the shaft and settling in the seal area.

VSD Application Considerations for Shaft Grounding

Shaft grounding can reduce the risk of shaft currents from passing through the bearings.

This allows the current generated in the shaft to flow harmlessly to the frame and ultimately to ground bypassing the bearings in the process. Shaft grounding options are considered sparking devices and cannot be used in hazardous areas. When selected for SD products, the Division 2 information will be removed from the nameplate.

SGS™ MOTOR GROUNDING BRUSH & RING SYSTEMS, **L29**, mounts on the fan housing with a carbon brush that makes contact with the motor shaft. The carbon brush is rated at 100,000 hours before being changed. Note: Not possible in combination with **G05**, **G06**, **H04**, **M08**, or **Y51**.

Bearing Isolator + grounding brush, (MGS INPRO Seal, **L86**), uses the labyrinth sealing protection of an Inpro Seal combined with shaft grounding brushes that rest on the shaft behind the sealing mechanism. The brushes reduce the shaft currents from passing through the bearings while the seal reduces contamination build up on the grounding brushes and in the bearing. Note: This option may reduce the usable shaft length.

AEGIS grounding brush, **M42**, can be added to the NDE on GP100 motors.

[Pricing](#)

Feet

Motors with cast iron frame will have cast in feet as standard.

Provisions for dowel holes, **K38**, provides a hole drilled at an angle in each of the motor feet. The holes will be used as a guide for drilling the mounting plate for the addition of the dowel once the motor is aligned to the driven equipment. Dowels can be used to pinpoint the alignment of the motor to the driven equipment when the motor is taken out for service.

Motors will be delivered as standard with dual/tri drilled mounting holes in the feet for increased flexibility in mounting.

Provisions for vertical jacking, **M39**, provides threads in the non-mounting holes on the feet in order that a bolt may be added for leveling of the motor during installation. Jacking provisions are required on motors that exceed 500 lbs to meet API610 requirements for horizontal pump applications.

The GP100A aluminum frame includes bolt on feet, 140-250 frames, for flexibility with in the field changes.

Lifting

Horizontal cast iron motors up to S449 will be supplied with an eye bolt located in the center line of the center of gravity on the motor frame. GP100 140 frame must include, option **L20**, for eyebolt to be included.

Vertical lifting devices, **K34**, are closed hooks used for vertical lifting and will be supplied with one on each side of the motor. Vertical lifting devices are standard when mentioned in the mounting description for Position 14 of the MLFB and on the LP/HP motors. Vertical lifting devices are only available on round frame motors.

3-1-3-7 Technical Details – Technical Information – Frame

Fan and Fan Cover

The standard bidirectional cooling fan is non-sparking polypropylene design, unless otherwise noted. Directional fans will have polypropylene blades with metallic mounting. Bronze fans, **M10**, are non-sparking and may be used on bi-directional motors. Aluminum fans, **M09**, may only be used on safe area motors and do not comply with IEEE 841 standards.

NEMA motors are supplied as either bi-directional or clockwise as standard (directional motors will be noted in motor selection section) as viewed from Non-Drive End (NDE).

Rotation arrows, **K70**, **K71**, **K72**, can be added to the fan housing for clarity. Motors supplied as unidirectional will have a rotational arrow as standard. Option **K72** can be used to achieve counter clockwise rotation on a motor that has clockwise as standard (this will make the motor MOD or Custom). Options K71 and K72 do not change the motor fan when applied to a bidirectional motor.

Cast iron fan cover will be included as standard on all SD motors. General Purpose motors will include fan cover in material mentioned in Table 8-2.

| General Purpose Fan Cover Material | | |
|------------------------------------|---------|-------------|
| Motor Type | Frame | Material |
| GP, GPA | 140-250 | Polyamide |
| GP | 280-320 | Plate Steel |
| GP | 360-440 | Cast Iron |

Table 8-2

Drip cover, **K33**, can be added to the fan cover of motors used in vertical shaft down applications in order to protect the motor from water or liquids from falling directly into the fan housing.

Drip Cover is standard when mentioned in the mounting description for Position 14 of the MLFB and on the LP/HP motors. See Table drawing and dimensions for drip cover dimensions.

Hardware

Standard hardware is grade 5 zinc plated corrosion resistant hardware. Stainless steel hardware, **L22**, includes all external nuts and bolts as well as the T-Drain. Stainless steel eyebolt, **M28**, is not included with **L22**. Stainless steel hardware is included with option, **B29**, for low ambient temperature and is not available on XP motors. Stainless steel T-drain, **L45**, will include only the drain as stainless steel.

All NEMA motors will include tapped holes on each side of the frame near the feet for frame grounding. Bronze ground bolt, **L27**, can be added for additional provisions.

Various types of drains are used based on the motor types (see motor type introduction for clarity). Drain plugs require the user to unscrew the plug to allow the moisture to escape during times of idle use. T-slot drains allow for moisture to drain from the motor freely without user intervention. Crouse Hinds drains, **L46**, are UL approved drains that can be added on frames 280 and larger. The Crouse Hinds drain is standard on XP motors in frame 280 and larger.

Ingress Protection

The ingress protection (IP) rating is the protection grade against water and dust. The IP rating on the nameplate applies to completed motor, including shaft seals, bearing housing fits, and terminal box. The first number designation in the IP rating, IP_{*} , relates to the protection against water. The second number designation in the IP rating, IP_{*} , relates to the protection against dust. GP100 motors will have a standard IP54 rating. Severe Duty and Definite purpose motors will have a standard IP55 rating that can be increased up to IP66 with options **L90**, **L91**, **L92**. Explosion proof motors have a standard IP65 rating that can be increased to IP66 with option, **L90**.

Pricing

Main Nameplate

Figure 9-1

Duplicate Rating Plate

A rating plate similar to the original nameplate, **M21**, can be supplied with the motor attached to the eyebolt during shipment. The **M21** plate can only be supplied without the logos on the plate.

Compliance Logos

Compliance logos and certifications will change based on the motor line and/or nameplate language.

Electrical Characteristics

Beginning in 2022 nameplates for 2, 4, and 6 pole motors will include 50Hz information at 400V, 50Hz with decreased output. This data can be replaced with 380V, option **C40**, or 415V, option **C41**. Note: SD100 IIEEE841 and SD661 will not have 50Hz as standard.

Motor main nameplate may be modified, **Y80**, for de-rate, re-rate, deviated altitude, deviated ambient, or information added to the main nameplate. Information must be consistent with guidelines listed in catalog for de-rate or re-rate and within the limitations set in the ambient and altitude section (unless custom quotation is referenced).

Note: Siemens reserves the right to reject/hold an order based on inconsistent information or the lack of information provided for option Y80.

When additional information is requested on the nameplate, it may result in standard information being displaced or removed due to space restrictions.

Hazardous Area Classification

All Severe Duty and Definite Purpose motors will be tagged as Class I, Division 2 as standard. Separate Division 2 tag, **M22**, can be supplied when required (see example Figure 9-2).

Fig. 9-2

SD100 motors in frames 280 to 400 and all SD100 IEEE841 will be supplied with Class II, Division 2 standard on the main nameplate see figure 9-1.

Separate Division 2 tag with Class I and Class II, **M25**, can be supplied when required. The motors with will be equipped with additional features and tagging figure 9-3.

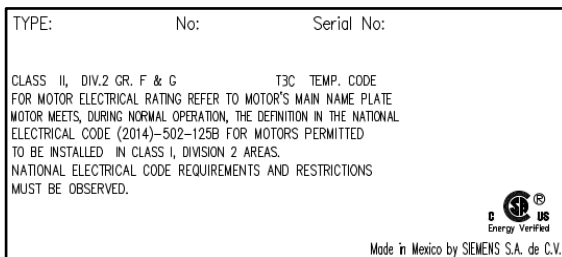

Fig. 9-3

Division 2 information will not be included when one of the following options are selected: **L29**, **L86** or any other feature that may be deemed as a sparking device.

Explosion proof motors will have a separate UL tag with the area classification defined as per Figure 9-4. Class II, Division 1, Group E hazardous area, **M32**, can be added on the XP100 motor line as a custom build.

Fig. 9-4

Auxiliary Plates

An auxiliary tag, **Y82**, may be provided separate from motor nameplate. This tag can be used for free text provided by customer in PO. This is often used for customer tagging or customer instructions. The tag has a character limit of 40 which includes spaces and special characters. Note: Siemens will not be held accountable for free text provided by customer that is provided in the PO that proves to be inconsistent with the motor design (unless specified in a Siemens custom quotation, Figure 9-5).

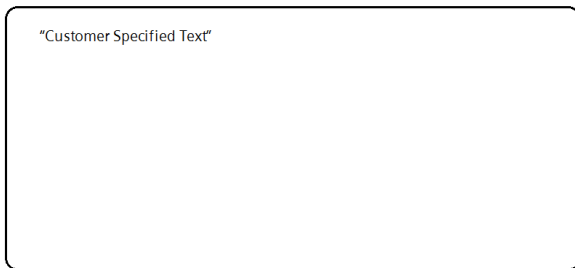

Fig. 9-5

A separate lubrication plate, **M24**, may be added for additional details on motor lubrication (see example Figure 9-7).

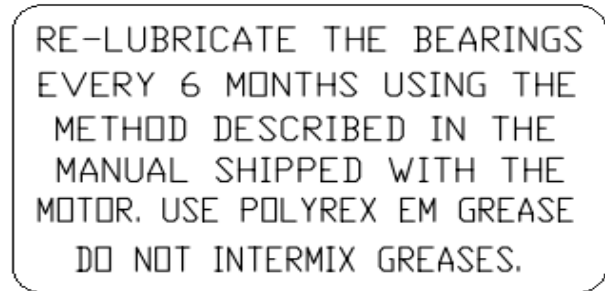

Fig. 9-7

| | B29 | +40C to -50C Ambient Temp | ✓ | -- | ✓ |

[Pricing](#)

Standard Ambient and Altitude

General Purpose and Severe Duty NEMA motors are suitable for operation at an altitude up to 3300 feet (1000 meters) above sea level with an ambient temperature range of -25C to 40C with 1.15 service factor as standard.

Explosion proof motors up to 320 frame will have a standard maximum ambient temperature of 55C with 1.15SF, 360 frame and up can be offered with 55C with **MLFB position 15 "T"** see [Winding Protection](#) and will have a T3 temp code (449T will have a 1.0SF at 55C). Explosion proof Division 1 motors cannot be offered at an ambient below -25C.

Increased Ambient or Altitude

Altitude can be adjusted up to 9900 feet or Ambient can be adjusted up to 55C with a reduction in service factor to 1.0 using **Y80** option code.

Altitude may also be increased with reduction in ambient per Figure 10-1.

For altitude above 9900 feet or ambient above 55C please contact the Siemens LOW VOLTAGE MOTOR quotation team.

| Maximum Altitude | Maximum Ambient |
|------------------|-----------------|
| 3300 ft (1000m) | 40°C (104°F) |
| 6600 ft (2000m) | 30°C (56°F) |
| 9900 ft (3000m) | 20°C (68°F) |

Table 10-1

Low Ambient Conditions

Ambient temperatures below -25C can cause standard grease to become ineffective and some standard metals to become brittle leading to motor failure or damage. Features for low ambient conditions can be added a a custom build, **B27** for down to -30C, **B28** for down to -40C, **B29** for down to -50C, include special grease, external hardware, shaft material, lead material, and seals for suitability for the low temperatures.

Standards

IEEE 841 Features, **K10**, adds the applicable features of IEEE 841 to the motor. The motors will be nameplated according to IEEE Std 841-2021.

API610, **K20**, provides the stringent guideline of API610 pumps to the LP100 motor line with high thrust. API610 is not available with extra high thrust, **K21**. See Bearings and Lubrication section for additional information.

Balance

All SIMOTICS motors are dynamically balanced to commercial limits measure in accordance with NEMA MG1-12.06. Precision and Extra Precision balance, **M69**, **M70**, provides more stringent balancing guidelines (see Technical Tables for values).

Table 11-1

Accessories

Vibration Monitoring

ROBERT SHAW Malfunction vibration detectors, **A66**, are a single point vibration monitoring switch. This is designed to trip and shut down the motor in the event of excessive vibration.

Provisions for vibration sensors, **A67**, will provide 1/4"–28 UNF drilled and tapped holes on each bearing housing when selected with no additional instruction. This option can also be adapted to the required drill and tap required for a customer specified vibration sensor with quote from LOW VOLTAGE MOTOR quotation team.

Encoders

DYNAPAR HS35R, **G05**, is a hollow shaft rotary pulse 1024 PPR encoder with single output. It is mounted on an NDE shaft extension that extends beyond the fan housing. It is held in place with an arm that is attached to the fan housing.

SLIM Tach ST56 for 140-250 frames or ST85 for 280-S449, **G06**, is a c-face mounted 1024 PPR encoder with single output. See [drawings and dimensions](#) for Encoder dimensions.

Brake

C-Face Mounted Brake, **H04**, will be a Stearns brake, rated IP55, rigidly mounted to the NDE of the motor with a special designed bearings housing with C-face for mounting the brake.

Brakes will be supplied with rated supply voltage equivalent to the motor voltage. See [drawings and dimensions](#) for basic brake data.

Additional Cooling for VSD Applications

Larger Fan, **M05**, can be added on select 2, 4, and 6 pole motors in frames 360-444 to provide additional cooling and extended speed range for constant torque. See [Technical Tables](#) for new range. The motor will be labeled as VSD only and the NEMA Premium logos will be removed from the nameplate.

External Force cooling, **M08**, can be added to severe duty motors for increased turndown on VSD applications, see [drawings and dimensions](#). The blower motor voltage will follow the voltage of the drive motor. The addition of the blower will increase the constant torque turndown to 1000:1. Class H insulation, **C00**, and Spike Resistant Wire, **C03**, and bearing insulation for frame 360 and above is also recommended for 1000:1 CT applications.

Others

Non-Reverse Ratchet (NRR), **M18**, prevents the opposite rotation of the shaft on the LP100 motor line. NRR is only available for standard clockwise rotation. This device is not suitable for hazardous locations and the standard Division 2 information will be removed from the nameplate.

[Pricing](#)

Packaging

Frames 280 and larger will be bolted to an open wood pallet and wrapped in plastic to protect the finish. See standard packaging weights in dims in [drawing section](#).

Stackable crate packing, **B07**, will have supported wooden slates on all sides surrounding the motor. This packing is available for frames 280 – 400 and provides additional protection during transport and allows for the motors to be stacked on the floor in a warehouse.

Export packing, **B09**, the motor will be secured into a fully enclosed wood crate. See Export box weights and dimensions in [drawing section](#). Special packing, **B11**, will include B09+shock and tilt sensors.

Shipping weights and dimensions can be calculated using the standard packing weights and dimensions table combined with the motor information. The weights and dimensions listed in the tables do not include the weight and dimensions of the motor unless otherwise noted.

Paint

NEMA motors as standard are protected against corrosion (C2 category) and external influences with high-quality coatings based on (Alkyd Modified + Epoxy). If a higher corrosive class is required, a special paint system must be included.

Motors can be provided with primer only, **N03**, to allow the customer to apply their own final paint in the field.

The 2 Parts Epoxy paint system, **N01**, offers excellent resistance to the corrosive action of chemical agents, prolonged weathering and to the action of direct sunlight.

The 3 Parts Epoxy paint system, **N02**, is an organic base of Epoxy Zinc, provides a high resistance to humid environments (saline or no-saline) but not for offshore ocean climate, excellent inhibitory capacity to corrosion, excellent resistance to abrasion, high temperatures (ambient temperatures > 59°C) and to the most of industrial solvents (splashes). This Paint System is recommended to apply in high relative humidity environments (>60%).

2 Parts Epoxy paint system, **N06**, offers the same level of protection as **N02** at a reduced price and shorter process time.

The 3 parts epoxy (Coastal-Offshore High Salt) paint system, **N05**, is recommended for offshore installation, provides good chemical resistance to splash/spillage, fumes and immersion in neutral, fresh and salt water. Effectively protects the motor from corrosion resulting from industrial and marine exposures as it is safeguarding the environment.

2 Parts Epoxy paint system, **N07**, offers the same level of protection as **N05** at a reduced price and shorter process time.

See [Technical Tables](#) for additional details.

Pricing

Siemens offers much of our documentation and certificates for download through our online DT-Configurator tool. This allows the data to be tailored to the motor configuration.

In addition to our online documentation we also offer a wide variety of order specific documentation through order codes as individual documents or as documentation packages. Ordered documents be provided in Siemens standard electronic format unless otherwise noted.

Information that is proprietary to Siemens will not be included in documentation supplied.

Drawings

Motor drawings can be provided in either pdf or dxf format as specified in the purchase order. The standard drawing, **F42**, can be used for a standard F1 configuration with no special options. This drawing is also available for download through the DT-Configurator.

The non-standard drawing in pdf format, **F43**, or in CAD (.dxf) format, **F48**, can be used for motors with mechanical modifications that would add on accessories or change the standard dimensions of the motor.

Conduit box drawing, **F44**, can be used for a standard conduit box drawing and auxiliary boxes.

Shaft Profile Detail, **F51**, provides a shaft profile drawing with limited dimensions and shaft material data

Curves

Standard performance curves, **F03**, will include the motor calculated speed torque curve and calculated performance curve (Efficiency, Power Factor, and Amps Over percent of rated horsepower) at rated voltage. This curve is also available for download through the DT-Configurator.

Stall Time Curve, **F40**, is a logarithmic curve of current (in present of full load) over time. The curve will be shown for both hot and cold conditions and graphically illustrates the safe stall time.

Curves at 100% and 80% voltage, **F07**, will included speed torque curve and performance curves.

Data Sheets

Typical Data sheet, **F49**, will provide an electrical data sheet for the motor ordered in Siemens standard format.

Customer specific data sheet, **F50**, provides the customer with the project data sheet filled out by Siemens engineering. The customer data sheet must be supplied in excel format at the time the purchase order is placed.

Special Calculations and Reports

Acceleration time calculation, **F04**, will be calculated based on the load inertia value provided by the customer. The inertia value must be provided with the PO.

Polarization Index, **F05**, provides a reference winding impedance to gauge deterioration of the winding insulation.

Shaft Torsional Analysis, **F08**, provides motor shaft torsional data for each step on the shaft with the shaft drawing.

Bearing L10 calculation, **F09**, calculates the estimated life of the bearings based on customer supplied application details. See [bearings](#) section for minimum application details required.

Other Documentation

Documentation and nameplates can be provided in Spanish, **D05**. This option will also include NOM on the nameplate.

Certificate of compliance, **F00**, can be issued to certify compliance with ISO standards.

Certificate of origin stamped by the Chamber of Commerce, **F01**, can be required when motors are exported for select countries.

Inspection Test Plan, **F70**, provides formal documentation of the factory standard tests and inspections.

Wiring diagram, **F45**, will provide a pdf copy of the motor wiring diagram for the motor ordered. This document is also available for download through the DT-Configurator.

Instruction and Operation Manual, **F46**, is general instructions for installation, operation and maintenance for NEMA motors.

This document is also available for download through the DT-Configurator.

Replacement parts list, **F47**, will provide part numbers and general descriptions for the following spare parts:

- Bearings, Fan, Fan housing, Conduit Box, Bearing housings (flange if applicable), and seals

Visual inspection Proof, **F60**, provides up to 8 photos of the motor prior to shipment. Photos will include nameplate and tagging, at least 3 views of overall motors, and detail special features.

Paint Report, **F71**, provides a measure of paint thickness and overall paint adherence.

Additional specialized documentation and calculations may be offered by the factory through the Siemens LOW VOLTAGE MOTOR quotation team.

Documentation Packages

Order specific documentation packages provide many of the common documents required for special projects and OEMs packaged into a zip file. Additional documentation options may be added with order codes as required by the project.

Advanced Document Package, **F81**, will include:

- (F46) Instruction Operation Manual
- (F00) Certificate of Compliance
- (F49) Data Sheet
- Nameplate Drawing
- (F45) Connection Diagram
- (F07) Speed vs Torque / Current Curve and Performance Curve (at 80% and 100% Voltage)
- (F47) Spare Parts List
- (F43) Outline Drawing (pdf)

Project Documentation Package, **F82**, will include:

- (F46) Instruction Operation Manual
- (F00) Certificate of Compliance
- (F49) Data Sheet
- Nameplate Drawing
- (F45) Connection Diagram
- (F07) Speed vs Torque / Current Curve and Performance Curve (at 80% and 100% Voltage)
- (F47) Spare Parts List
- (F43) Outline Drawing (pdf)
- (F48) CAD Dimension drawing
- Thermal Limit Curve (at 80% and 100% Voltage)
- (F44) Terminal box drawing
- (F50) Customer specific data sheets
- (F70) ITP
- Hazardous Area Certs (UL or CSA)
- Details of Paint System

Routine Test, F10, F12

Routine test consists of the following items tested in accordance with IEEE standard 112.

- No Load Current
- No Load Speed
- Nominal Current at Locked Rotor
- Winding Resistance
- High Potential
- Bearings/Vibration Check

Routine Test with vibration, F20, F22

Includes all tests from standard routine test with additional records of vibration testing. A hard copy of the Routine Test with vibration is included on all IEEE 841 compliant motors, adding **F20** will get you the test report in electronic format.

Test report of routine test is based on IEEE Std. 112 Form A-1 and includes complete nameplate information.

Electrical Duplicate Routine Test, **F36**, is an electronic copy of a test report of the same electrical design as the motor on order.

Performance Load Test, F27

Performance Load Tests the motors at select points from 0-125% of the rated load recording speed, torque, current, power factor and efficiency, at rated voltage. Data is curve plotted, on Siemens standard format. Foot mounted motors only.

Complete Test, F15, F17

Complete test consists of the following items tested in accordance with NEMA and IEEE-112 test standards.

- Full Load Heat Run
- Temperature Rise at F.L.
- Winding Resistance
- Rated F.L. Slip
- No Load Current
- Breakdown Torque
- Locked Rotor Torque-Amps
- High Potential Tests
- Efficiencies @ 100, 75, 50 Percent Load
- Power Factor @ 100, 75, 50 Percent Load

Test report of complete test is based on IEEE Std. Form A-2 and includes complete nameplate information.

Electrical Duplicate Complete Test, **F37**, is an electronic copy of a test report of the same electrical design as the motor on order.

Noise Test, F30, F32

Motors are tested according to IEEE 85 standard in unloaded condition only. Test report will be provided with Sound Pressure (L_p) and sound power (L_w) in octave bands of 125Hz, 250Hz, 500Hz, 1kHz, 2kHz, 4kHz, and 8kHz.

Introduction

SIMOTICS General Purpose motors are designed and built to operate in a variety of commercial and industrial environments. These motors are design to meet or exceed the NEMA Premium® efficiency (MG1 Table 12-12). A wide selection of options makes them suitable for a variety of applications. The construction of these motors is backed up by its 18 month warranty.

| Performance Specification | | | |
|--|---------------------------------------|---------------------|-------------------------|
| | | GP100A | GP100 |
| HP Range | 3600 RPM | 1-20 HP | 1-200 HP |
| | 1800 RPM | 1-20 HP | 1-200 HP |
| | 1200 RPM | 1-20 HP | 1-200 HP |
| | 900 RPM | -- | 1-125 HP |
| Frame Size | 140T - 440T | 140T-250T | 140T-449T |
| Standard Voltage (3~ 60 Hz) | 230V/460V (Suitable for 208V) | FS 140-250 | FS 140-250 |
| | 230V/460V | 1-20 HP | Up to 75 HP |
| | 460V | 1-20 HP | 1-200 HP |
| | 575V | 1-20 HP | 1-200 HP |
| Efficiency | NEMA Premium® (MG1-Table 12-12) | 1-20 HP | 1-200 HP |
| | NEMA Premium® Plus (>MG1-Table 12-12) | 1 - 20 HP | |
| Service Factor | 1.15 @ 40°C | FS 140-250 | FS 140-440 |
| Insulation | Non-Hygroscopic | Class F | |
| Temperature Rise | Class B | @ 1.0SF | |
| | Class F | @ 1.15SF | |
| Conduit Box (Oversized) | Oversized | Aluminum FS 140-250 | Steel - FS140-400 |
| | | | Cast Iron - FS400 |
| Fan Cover | | Plastic | Plastic/Steel/Cast Iron |
| Cooling Fan | Bi-Directional | Polypropylene | |
| Rotor | Die Cast Aluminum | FS 140-250 | FS 140-449 |
| Ingress Protection | NEMA MG1 | IP55 | |
| Hazardous Location | Safe Area | FS 140-250 | FS 140-440 |
| | | | |
| Inverter Duty | Variable Torque 20:1 | FS 140-250 | FS 140-440 |
| | Constant Torque CT 4:1 | FS 140-250 | FS 140-440 |
|       | | | |

Frame and End Shields

The SIMOTICS General Purpose Motors are available in two different lines, GP100 which features a cast iron frame and end shields and GP100A with aluminum frame and endshields. Both offer an aluminum, easy-to-access, diagonally-split, oversize terminal box; the terminal box includes a heavy-duty ground lug and non-wicking clearly and permanently marked leads. These characteristics, its zinc-plated hardware, epoxy paint, and stainless steel nameplate provide exceptional structural integrity and resistance to rust and corrosion, and make them ideal for use in material handling, pump, fan compressor, and other industrial and commercial applications.

Rotor and Stator Windings

A unique offset rotor bar design provides improved efficiency, while larger bars and end rings reduce resistance for lower rotor losses. Each die cast aluminum rotor assembly is dynamically balanced for extended bearing life and includes a high-strength carbon steel (C1045) shaft for maximum rotor performance.. The stator is manufactured with premium electrical C5 grade steel lamination and copper electrical magnet wire that furthers the reduction in losses

Insulation

The proprietary Class F non-hygroscopic insulation system, NEMA Class B temperature rise, provides an extra margin of thermal life. The varnish system application ensures maximum wire penetration to provide protection from moisture, corrosion and electrical shock. This insulation system meets or exceeds NEMA MG1 2014 Part 31 making the motors suitable for variable speed drives in constant torque (up to 4:1) and variable torque (20:1). All windings are tested for CIV.

Cooling System

A non-sparking, bi-directional fan is locked and keyed to the shaft. Its low-inertia design reduces windage losses, improves airflow, reduces noise and provides dependable cooling. A durable and rigid plastic fan cover is offered on every frame size.

Bearings

The motor are equipped with antifriction ball bearings, double shielded up to frame size 250 for the drive end and frame size 280 and above on the non drive end; Frames 280 and above are provided with single shielded bearings on the drive end and they are also available with roller bearings, when roller bearings are used, the non drive end will be equipped with single shielded bearings.

Voltage code "1-4" - Suitable for 208V

NEMA Premium is a certification mark of the National Electrical Manufacturer's Association.

Introduction

Siemens Severe Duty motors are designed and built to operate under harsh environments in the industry, including but not limited to petrochemical, pulp and paper mills and waste-water treatment. Fans, compressors, pumps and conveyors are some of the many applications. These motors are design to meet or exceed the NEMA Premium® efficiency (MG1 Table 12-12) as well as the most stringent industry standards IEEE 841. A wide selection of options, among them IP56 ingress protection, encoders, brakes and blower, provide higher flexibility and reliability to a diversity of operating conditions. The construction of these motors is backed up by its 3 to 5 year warranty for SD100, and 5 year warranty for SD100 IEE841 and SD661.

| Performance Specification | | | | |

- 4) As option (M05 - VSD Fan)

Frame and End Shields

The SIMOTICS Severe Duty motor, SD100, SD100IEEE841 and SD661, feature cast iron frame, end shields, and an easy-to-access, diagonally-split, oversize terminal box; the terminal box is provided with a neoprene gasket and includes a heavy-duty ground lug and non-wicking clearly and permanently marked leads. These characteristics, its high strength zinc-plated hardware, epoxy paint and stainless steel nameplate provide exceptional structural integrity and resistance to rust and corrosion, making them suitable for severe duty applications in harsh environments

Rotor and Stator Windings

A unique offset rotor bar design provides improved efficiency, while larger bars and end rings reduce resistance for lower rotor losses. Each die cast aluminum rotor assembly is dynamically balanced for extended bearing life and includes a high-strength carbon steel (C1045) shaft for maximum rotor performance.

The stator is manufactured with premium electrical C5 grade steel lamination and copper electrical magnet wire that furthers the reduction in losses.

Insulation

The proprietary Class F non-hygroscopic insulation system, NEMA Class B temperature rise, provides an extra margin of thermal life. The varnish system application ensures maximum wire penetration to provide protection from moisture, corrosion and electrical shock. This insulation system meets or exceeds NEMA MG1 2014 Part 31 making the motors suitable for variable speed drives in constant torque (4:1) and variable torque (20:1). All windings are tested for CIV.

Cooling System

A non-sparking, bi-directional fan is locked and keyed to the shaft. Its low-inertia design reduces windage losses, improves airflow, reduces noise and provides dependable cooling. Cast Iron fan covers are provided for all frames sizes.

Bearings

Single shielded bearings are used for better bearing protection against contaminants.

NEMA Premium is a certification mark of the National Electrical Manufacturer's Association.

Introduction

Siemens Explosion Proof motors are **not only** designed and built to operate under harsh environments in the industry, including but not limited to petrochemical and the **food industry**. Fans, compressors, pumps and conveyors are some of the many applications. These motors are design to meet or exceed the NEMA Premium® efficiency (MG1 Table 12-12) as well as the high requirements for safety and protection established by the NFPA 70 code NEC®. These motors are prepared for different hazardous atmospheres for gas and dust protection, its IP65 ingress protection provides reliability and safety assurance in all cases. The construction of these motors is backed up by its 3 to 5 year warranty.

1) Group E as option (M32)

Frame and End Shields

The SIMOTICS Explosion Proof motors, XP100 and XP100 ID1, feature cast iron frame, end shields and an easy-to-access diagonally split, oversize terminal box; the terminal box is provided with a neoprene gasket and includes a heavy-duty ground lug and non-wicking clearly and permanently marked leads. These characteristics, its high strength, zinc-plated hardware, epoxy paint, and stainless steel nameplate provide exceptional structural integrity and resistance to rust and corrosion, making them suitable for severe duty applications in harsh environments

Rotor and Stator Windings

A unique offset rotor bar design provides improved efficiency, while larger bars and end rings reduce resistance for lower rotor losses. Each die cast aluminum rotor assembly is dynamically balanced for extended bearing life and includes a high-strength carbon steel (C1045) shaft for maximum rotor performance.

The stator is manufactured with premium electrical C5 grade steel lamination and copper electrical magnet wire that furthers the reduction in losses.

Insulation

The proprietary Class F non-hygroscopic insulation system, NEMA Class B temperature rise, provides an extra margin of thermal life. The varnish system application ensures maximum wire penetration to provide protection from moisture, corrosion and electrical shock. This insulation system meets or exceeds NEMA MG1 2014 Part 31, making the motors suitable for variable speed drives in constant torque (4:1) and variable torque (20:1). All windings are tested for CIV.

Cooling System

A non-sparking, bi-directional fan is locked and keyed to the shaft. Its low-inertia design reduces windage losses, improves airflow, reduces noise and provides dependable cooling. Cast Iron fan covers are provided for all frames sizes.

Bearings

Single shielded bearings are used for better bearing protection against contaminants.

Voltage code "1-4" - Suitable for 208V

NEMA Premium is a certification mark of the National Electrical Manufacturer's Association.

Introduction

Siemens Definite Purpose Motors are designed and built to operate under harsh environments in the industry, including but not limited to petrochemical, pulp and paper mills and waste-water treatment. In-line pumps, Booster, Centrifugal and Non-Clog pumps, Vertical Turbine, mix flow and propeller pumps are some of the many applications. Pump motors are design to meet or exceed the NEMA Premium® efficiency (MG1 Table 12-12) as well as the most stringent industry standards API610 (LP100) and IEEE 841 where applicable. DP200 HPS motors use the SD200 as a base with added features (Provisions for Bearing RTDs, Provisions for Vibration detectors, and Insulated NDE bearing) that are key in the Horizontal Pump Systems motors. SD10 MS motors are energy efficient motors build with the same characteristics of our Severe Duty line. A wide selection of options, among them bearing isolator and ceramic bearings on drive end, extra high thrust and Non-Reverse Ratchet for LP100 motors, make these motors suitable almost any requirement. The construction of these motors is backed up by its three year warranty and 5 years when order with IEEE841 features.

Frame and End Shields

Definite purpose motors feature cast iron frame, end shields and an easy to access, diagonally split, oversize terminal box; the terminal box is provided with a neoprene gasket and includes a heavy duty ground lug and non-wicking clearly and permanently marked leads. These characteristics, its zinc-plated hardware, epoxy paint and stainless steel nameplate provide exceptional structural integrity and resistant to rust and corrosion, and make them suitable for severe duty applications in harsh environments

Rotor and Stator Windings

A unique offset rotor bar design provides improved efficiency, while larger bars and end rings reduce resistance for lower rotor losses. Each die cast aluminum rotor assembly is dynamically balanced with half key for extended bearing life and includes a high-strength carbon steel (C1045) shaft for maximum rotor performance.

The stator is manufactured with premium electrical C5 grade steel lamination and copper electrical magnet wire that reduce losses.

Insulation

The proprietary Class F non-hygroscopic insulation system, NEMA Class B temperature rise, provides an extra margin of thermal life. The varnish system application ensures maximum wire penetration to provide protection from moisture, corrosion and electrical shock. This insulation system meets or exceeds NEMA MG1 2014 Part 31 making the motors suitable for variable speed drives in constant torque (4:1) and variable torque (20:1). All windings are tested for CIV.

Cooling System

A non-sparking, bi-directional fan is locked and keyed to the shaft. Its low-inertia design reduces windage losses, improves airflow, reduces noise and provides dependable cooling. Metal sheet fan covers are provided for all frames sizes.

Bearings

Definite purpose motors are provided with single shielded bearings, HP100 (DE and NDE) and LP100 (DE) include regreasable open ball bearings for up to 250HP and 250LP frames, The LP100 opposite drive end features a duplex angular contact thrust bearing, across all frames sizes, depending on the arrangement the motor can provide high thrust or up to 175% extra high thrust..

NEMA Premium is a certification mark of the National Electrical Manufacturer's Association.
 QuikMOD Delivery is for stocked motors only.

3-3 Option Selection and Pricing - Introduction

Siemens offers a wide selection of options to increase the suitability of our motors to the specific customer needs.

Modified Stock Options:

QM = QuikMOD

MOD = Modification

Custom Build Options:

Case A-1: Base Custom Delivery

Case A-2: One additional week

Case B: Three additional weeks

Definitions:

MLFB Digit – Modifications or Custom features that are built into the motor part number (MLFB).

Short Codes – Modifications or Custom features that are added after the part number.

Ordering Instructions:

1. Select a stock motor from the **Motor Selection and Pricing Section**. (Note Part Number)
2. **Verify applicability of desired Option(s) at the end of the section.** (Per motor type and frame)
3. **Select applicable Option(s).**
4. **Construct new Part Number and List Price.** (See example below)
 - a. If the MLFB Position is 12, 13, 14, 15 or 16, replace the number(s) or letter(s) at the same position(s) in the stock motor **Part Number** with the **MLFB Code**.
 - b. If the option is a **Short Code**, then add a **'-Z'** to the end of the motor **Part Number** and add the **short code**. Then add a **'+'** sign followed by the **additional short Code(s)**.

Custom Options combined with QuikMOD Motor Pricing Example:

Example: 15HP, 1800RPM, 208-230/460V, 254T, SD100, Copper Rotor, D-flange with feet, PTC thermistors (3 embedded temperature sensors for tripping) with conduit to main box and Class H insulation.

| | | |
|----------------------------|----------------|--|
| Base List Price: | \$2,131 | Part Number 1LE23112BB114AA3 |
| List Price Adders: | | |
| D-Flange with Feet | \$774 | Order Code F , Order Code Position 14 |
| PTC Thermistors | \$634 | Order Code B , Order Code Position 15 |
| Conduit to Main Box | \$251 | Order Code J02 , Order Code Position Z |
| Class H Insulation | <u>\$157</u> | Order Code C00 , Order Code Position Z |
| Total List Price: | \$3,947 | New Part Number – 1LE23112BB114FB3-Z J02+C00 |
| Delivery: | | Please contact Siemens for delivery |

Overview

Siemens NEMA motors are built to meet the dimension criteria set by the NEMA MG-1 standards. Mounting dimensions will be per NEMA unless otherwise noted. Seals may alter the expected usable shaft length of the motor. When INPRO seal is selected or when a product has a standard INPRO seal the usable shaft length will be equal to the N-W less the values shown in Table 5-1. Dimensions in this section are typical dimensions of standard motor designs and are subject to change without notification. Certified standard and configured drawings are available through order codes listed in the modification section.

| 6-4 | Commissioning and Usage |
| 6-4-1 | Commissioning SIMOTICS CONNECT 400 |

Overview

Drive systems keep production running and play a key role in countless production processes. Faults or the failure of individual drive components often result in costly production outages, which is why it's so important to monitor the condition of the machine motor. The prevention of failures through timely and deliberate action requires an end-to-end operational transparency – and measures such as targeted proactive maintenance.

With the plug-&-play connectivity module SIMOTICS CONNECT 400 and the analytics app SIDRIVE IQ Fleet, you can implement a cost-effective, cloud-based solution for continuous condition monitoring and comprehensive fleet management of your low-voltage motors worldwide, 24/7.

Whether you're monitoring new motors or upgrading your installed base – the SIDRIVE IQ Fleet MindSphere application improves the reliability, availability, efficiency, performance, and productivity of your low-voltage motors. You take advantage of preventive maintenance for your motors using reliable status data and information on maintenance intervals.

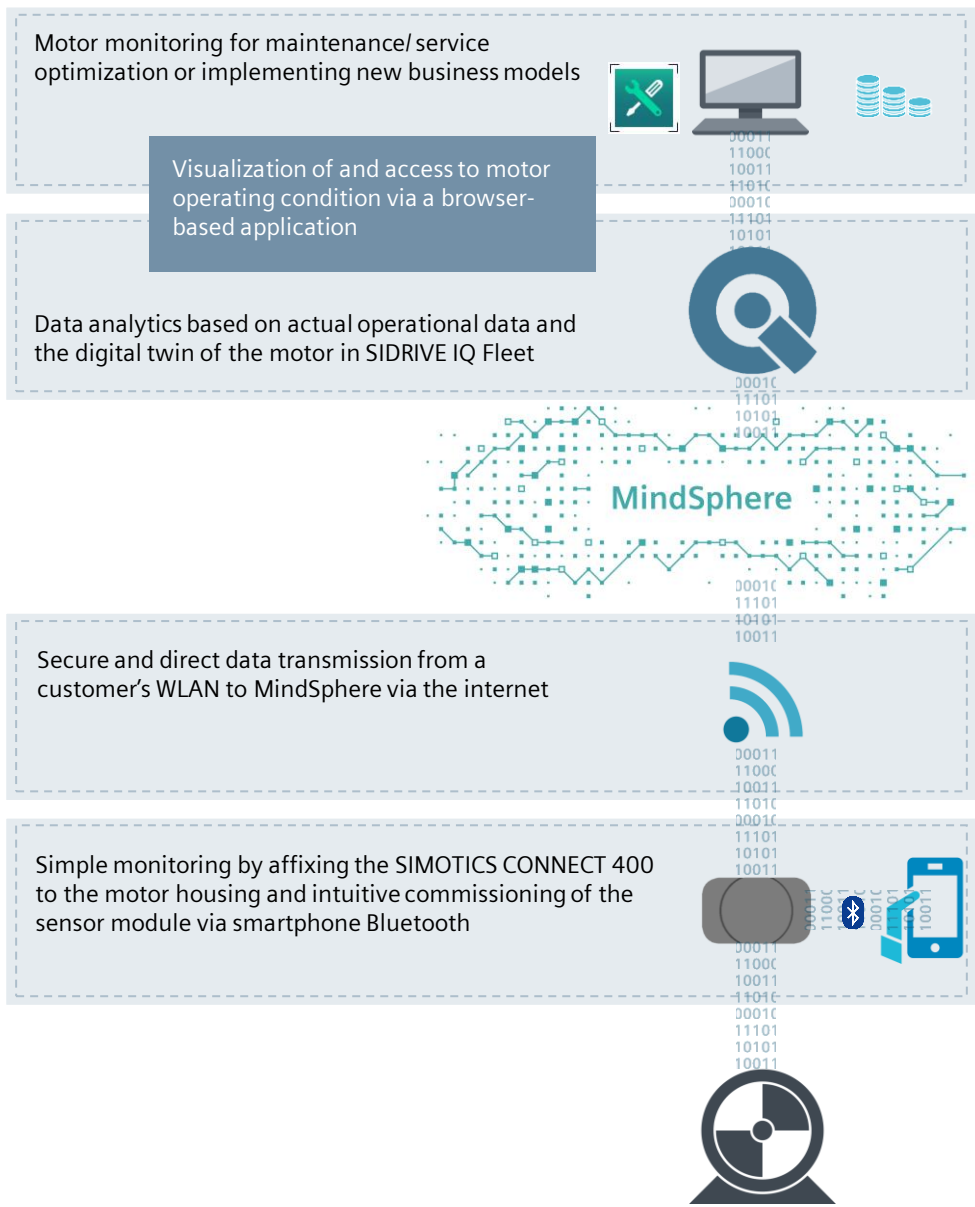

Benefits

- Simplicity and user-friendliness:
 - Simple mounting by gluing the sensor module SIMOTICS CONNECT 400 to the motor
 - Fast commissioning and configuration, thanks to the intuitively operated smartphone app SIDRIVE IQ Config
 - Use of standard network hardware (no manufacturer-specific gateways needed)
- Autonomous design: Power supply via battery pack and data transfer via WLAN require no connecting cables
- Optimized serviceability: Simple as well as ecologically and economically practical maintenance by replacing the battery pack
- Optimum operational transparency: SIMOTICS CONNECT 400 and SIDRIVE IQ Fleet help machine operators to better understand their machines and all relevant components. With knowledge of how the motors are currently running and what changes in operation have occurred, it's possible to make predictions about operational performance in the future.
- Anomaly detection and trend analyses based on historical data for optimizing your plant
- Adjustable limit values and automated alarms help you to detect impending failures well in advance and prevent them through maintenance activities
- Take advantage of our expert knowledge of drive technology by taking into account operational data (including historical), digital twins of the motors, intelligent algorithms, and analytics
- Access to cloud-based analytics in MindSphere from any terminal device via a web browser, without software installation
- Higher data quality and precision for Siemens motors, thanks to the use of equivalent electrical circuit diagrams, product-specific data from production, and other additional elements from the digital twin of the motor

6-1-2 Orientation – System Architecture

System Architecture

Besides the actual health monitoring of your motor fleet, the cloud-based SIDRIVE IQ Fleet application embedded in the MindSphere ecosystem provides nearly endless opportunities for customer business models.

Enabling new digital business models is a key feature and differentiator in the architecture of SIDRIVE IQ Fleet.

Plug-&-play is key: installation, commissioning and configuration of SIMOTICS CONNECT 400 is as easy as it gets. Operators have the system up and running within minutes.

Data is transferred automatically and therefore guarantees a continuous condition monitoring of your motor fleet.

6-2-1 Connectivity Module – Technical Specification

| General Information | |
|-----------------------------|--|
| Product Description | SIMOTICS CONNECT 400 with integrated sensors monitors the condition of the motor to make its operation transparent, which facilitates application and process optimizations. SIMOTICS CONNECT 400 can be used in conjunction with the MindSphere app SIDRIVE IQ Fleet only. |
| Monitoring application | Visualization of motor health status and data analytics based on digital motor twins are offered in the comprehensive SIDRIVE IQ Fleet MindSphere app. |
| Measured motor parameters | Temperature, radial/tangential/axial vibration, electrical stator frequency, slip frequency. |
| Calculated motor parameters | Motor state (on/off), rotation speed, torque, electrical power, energy consumption, number of starts, hours of operation |
| Other motor parameters | Maintenance requirements, such as relubrication interval |
| Supported motors | Fin-cooled, 3-phase asynchronous low-voltage motors in line operation (DOL) and converter operation (VSD), IEC frames sizes 80 to 450 and NEMA frame sizes 48 to 500 |
| Installation/ mounting | |
| Mounting type and position | Externally mounted on the motor's cooling fins with a mounting bracket (glued). As described in the installation instructions |
| Qualified adhesives | HENKEL LOCTITE® HY 4090TM, Weicon Fast Metal Minute Adhesive, 3M Scotch-Weld DP 8407 NS |
| Power supply | |
| Type of supply | Battery pack (LI/SOCI2, 3,6 V, 4 cells, AA size, non-rechargeable) |
| Battery lifetime | Operating time up to 2 years*, replaceable for lifetime extension *At an environmental temperature of 0° C to 40° C, a measurement interval of 5 minutes and a transmission of the stored data once every 24 hours |
| Internal data storage | |
| Internal flash | Data storage of min. 48 hours*, when MindSphere connection is interrupted *At measurement interval of 1 minute |
| Communication | |
| Bluetooth | Used for configuration and commissioning* Compliance with Bluetooth v4.1 Frequency: 2.400 GHz to 2.482 GHz Range: up to 10 m *Commissioning consists of integration into the local WLAN network and onboarding to MindSphere |
| WLAN | Used for data transmission* and firmware updates IEEE 802.11 b/g/n Frequency: 2.400 GHz to 2.485 GHz Range: up to 100 m *MindSphere synchronization interval adjustable between 1 hour and 48 hours (default: 24 hours) |
| Integrated sensors | |
| Measurement interval | Configuration between 1 minute and 1 hour (default: 5 minutes) |
| Temperature measurement | |
| Range | -40° C to +85° C |
| Resolution | 0.03° C Temperature measured at the contact between connectivity module and mounting bracket |

6-2-1 Connectivity Module – Technical Specification

| Vibration measurement | |
|--|---|
| Physical measuring principle | Overall vibration VRMS 3-axis |
| Range | 0.02 to 180 mm/s 10 Hz to 1.6 kHz |
| Magnetic field measurement | |
| Range | 0.01 Hz to 300 Hz Rotary stray field |
| Standards, approvals, certificates | |
| CE, FCC, IC, SRRC, IFETEL, RCM, ETA, SDPPI, ICASA, SUBTEL, ARCOTEL, MTC, FAC, CNC, CRC, NBTC, IMDA, OFCA, MOC, KVALITET, ICT | |
| Degree and class of protection | |
| Degree of protection acc. To EN 60529 | IP65 |
| Shock resistance | Max. 100 m/s ² (tested acc. Class 3M4) |
| Ambient conditions | |
| Ambient temperature during operation | -40° C to +80° C |
| Ambient temperature during storage/transportation | -20° C to +40° C |
| Relative humidity | 5 % to 95 % (without condensation) |
| Software | |
| Mobile app for commissioning and configuration | SIDRIVE IQ Config (Android and IOS) |
| Documentation and information | |
| More technical product information and documentation is available at: Siemens.com/digital-motor | |

The delivery is realized in a single product packaging:

- SIMOTICS CONNECT 400 connectivity module including batteries (battery plug disconnected during transport)
- Metal mounting bracket for installation on the motor housing
- Retaining screws
- Assembly instructions
- Safety and security information sheet
- CD with license texts

Note:

The adhesive is NOT included in the scope of delivery. We recommend using one of the below listed adhesives, which have been tested and qualified by Siemens:

Henkel LOCTITE® HY 4090™, Weicon Fast Metal Minute Adhesive, 3M Scotch-Weld DP 8407 NS

Ordering Data

| SIMOTICS CONNECT 400 Connectivity Hardware Kits For connecting low voltage motors to the MindSphere application SIDRIVE IQ Fleet | | | |
|---|--------------------|----------------|-----------------------|
| Kit Quantity | Part Number | Price per unit | Total List Price (\$) |
| 1 unit | 9LD2200-0BA00-0AA0 | 615.00 | 615.00 |
| 10 units | 9LD2200-0BA00-0AB0 | 525.00 | 5,250.00 |
| 35 units | 9LD2200-0BA00-0AC0 | 465.00 | 16,275.00 |
| 200 units | 9LD2200-0BA00-0AD0 | 433.50 | 86,700.00 |

One unit corresponds to one SIMOTICS CONNECT 400 Connectivity Kit as described above. Each kit is individually packed. Multi-unit packages are additionally bundled in a bigger outer packaging.

Dimension Drawing

6-3-1 Analytic Software - Overview

MindSphere – the Siemens IoT-as-a-service solution

MindSphere is the leading industrial IoT as a service solution. Using advanced analytics and AI, MindSphere powers IoT solutions from the edge to the cloud – with data from connected products, plants and systems – to optimize operations, create better quality products and

deploy new business models. MindSphere empowers customers and partners to quickly build and integrate personalized IoT applications or utilize the existing ones, such as SIDRIVE IQ Fleet.

Applications

Powerful industry solutions with advanced analytics

SIDRIVE IQ Fleet
IoT offering for motor fleet monitoring

Develop robust industrial IoT solutions faster with global scalability

Connectivity

Connect products, plants, systems, machines and enterprise applications

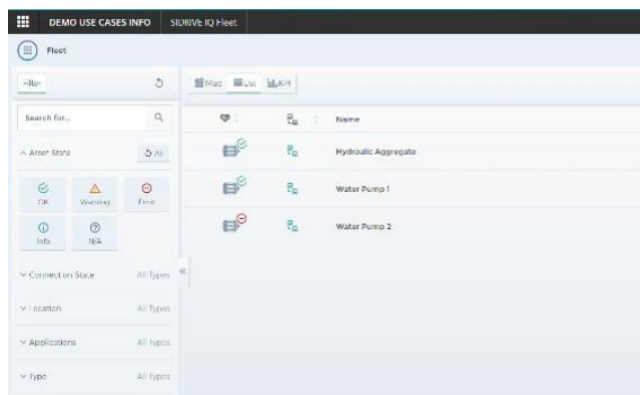

SIMOTICS CONNECT 400
for connecting Low Voltage Motors

SIDRIVE IQ Fleet – cloud-based solution for motor monitoring

The MindSphere application SIDRIVE IQ Fleet allows you to access all relevant data of your installed motors. The application includes a variety of functions which assist you in managing motors' maintenance and operations. SIDRIVE IQ Fleet provides you aggregated statistics and localization of your fleet, as well as individual KPIs, logbook, motor profile and product documentation.

By using SIDRIVE IQ Fleet you can optimize your fleet maintenance tasks, reduce unscheduled downtime and increase your plant availability.

6-3-2 Analytic Software – Motor Monitoring

Offering for motor monitoring

The SIDRIVE IQ Fleet offering consists of two main package types:

[SIDRIVE IQ Fleet Package Basic](#) includes the MindSphere base tenant, the application SIDRIVE IQ Fleet and selected MindSphere resources which are required to access the Platform and to utilize the application.

SIDRIVE IQ Fleet Asset Packages enable you to connect additional motors to your tenant.

**SIDRIVE IQ Fleet Package Basic****Description:**

- provides unique customer tenant with customizable URL and pre-installed SIDRIVE IQ Fleet application
- deployable also on existing customer IoT Value Plan

Provided value:

- free-of-charge access to MindSphere and motor monitoring application SIDRIVE IQ Fleet
- easy-to-understand business model without any hidden costs

All the packages have a standard subscription duration of one year and get automatically renewed at the end of the 12 months.

Benefit from the pre-defined SIDRIVE IQ Fleet Packages, tailored to your needs. Find the complete SIDRIVE IQ Fleet offering in the [MindSphere Store](#) and choose between multiple packages to start your IoT experience by connecting your motors.

**SIDRIVE IQ Fleet Asset Packages****Description:**

- increases the connectable assets to the tenant by x assets, depending on the package you purchase
- provides the exact amount of MindSphere resources needed for connecting and monitoring x motors

Provided value:

- risk-free and convenient scalability thanks to a flexible asset-based payment model
- benefit of lower per-asset-prices by selecting multiple-asset-packages

You can find additional information and the terms & conditions in the [SIDRIVE IQ Fleet Package Product Sheet](#).

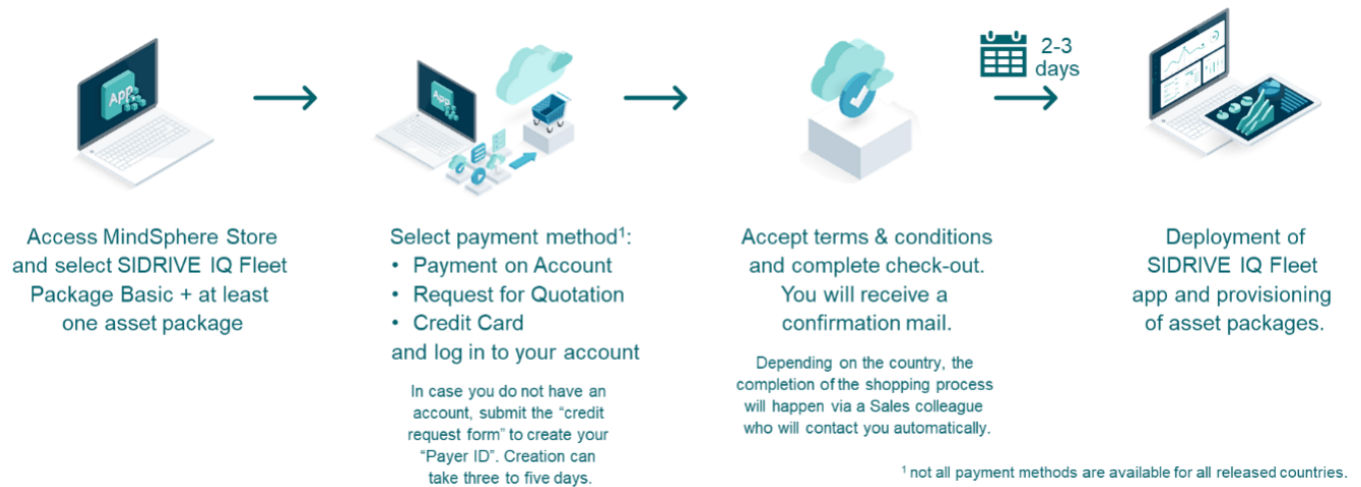

6-3-3 Analytic Software – Purchasing Process – MindSphere Store

Purchasing process via MindSphere Store

Process for your MindSphere account creation and SIDRIVE IQ Fleet Packages purchase via MindSphere Store

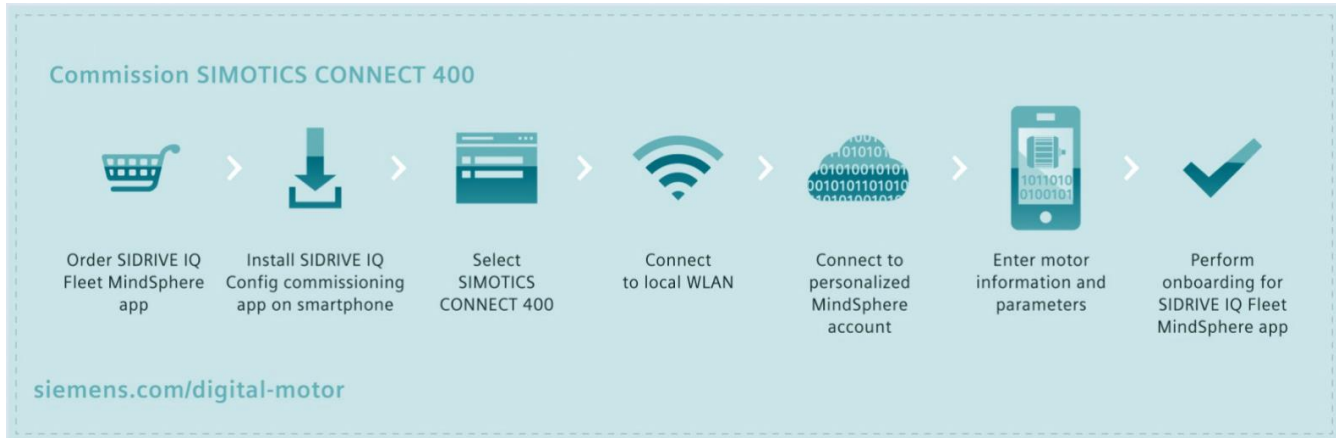

If you do not have yet a MindSphere Account, access [MindSphere Store](#) and follow the steps below, in order to start your journey with SIDRIVE IQ Fleet.

In case you've already a MindSphere payer account, you can purchase the packages starting directly with the step number 3. You can find more information and tutorial in regards of SIDRIVE IQ Fleet Packages purchasing process on our website [siemens.com/digital-motor](https://www.siemens.com/digital-motor).

Commissioning of SIMOTICS CONNECT 400

1. Get SIDRIVE IQ Fleet app via the MindSphere Store

Order [SIDRIVE IQ Fleet Package Basic](#) (tenant and application) plus at least one SIDRIVE IQ Fleet Asset Package, e.g. [SIDRIVE IQ Fleet Package 1 Asset](#)

2. Download commissioning app onto your smartphone

Install "SIDRIVE IQ Config" on your mobile device to configure SIMOTICS CONNECT 400

IOS

Android

3. Commission SIMOTICS CONNECT 400

Integrate the sensor module into the local WLAN network and onboard it to MindSphere by using our intuitive mobile app SIDRIVE IQ Config

Wide selection

Providing value also means having the right motor for the job. At Siemens, we strive to offer a wide variety of motor types in many different frame sizes, with many different power ratings. However, this catalog only covers our medium voltage 449, S449, 5011, 5810 and SH400 frame sizes. Visit our AboveNEMA website at: www.usa.siemens.com/abovenema.

The Norwood, OH plant manufactures both horizontal and vertical AC squirrel-cage induction motors with power ratings up to 22,000 horsepower. Larger induction motors are also available from other Siemens plants.

Total customer support

When you're looking for a motor, look for a highly trained specialist to help you match the right motor to your specific needs. Siemens sales engineers have the knowledge, training, and experience to help you solve performance or installation challenges, ensuring the best value for your investment. Our experts can also perform fully functional retrofits of previous long-standing motors to maximize your plant operation time.

Customer Service for Optimum Performance

Our global network of repair centers is constantly growing, as well as our number of local Field Service experts, to ensure your motor maximum up-time. We also offer product support over the motors complete service life to ensure our customers are continuously satisfied. Our customer service centers take pride in putting our customers first. Whether it's an expedited shipment, tracking of your order, or making sure your motor is properly installed, these professionals won't be satisfied until you are. In addition, we offer 24/7 On-Call service to ensure a quick response time.

Siemens Manufacturing & Stocking Facility

4620 Forest Avenue
Norwood, OH 45212

Availability

Contact your local Siemens representative to get your quote.

Quality from Experience

The quality of our motors begins with the design experience we have gained through more than 120 years of manufacturing and installing motors. We build on this experience every day with designs that incorporate the latest materials and techniques to provide even higher levels of performance, operating efficiency, and reliability. These advanced motor designs are assembled in our state-of-the-art, ISO 9001 Certified Norwood, OH facility. This 350,000 square foot facility has produced over 150,000 high / medium voltage motors with the highest quality machinery available.

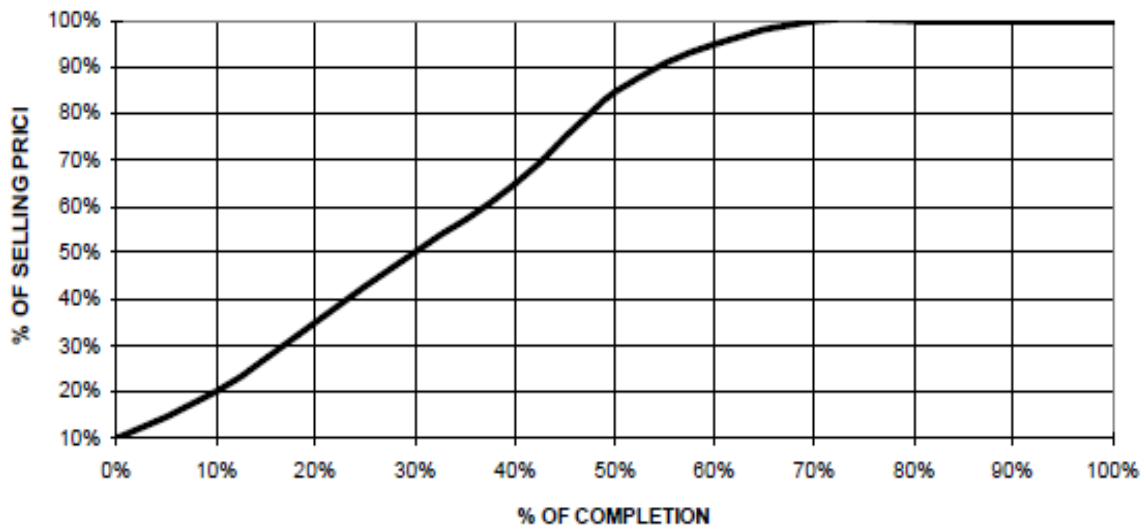

7-1-2 Introduction - Warranty and Cancellation

Warranty Offerings

For a copy of our Standard Warranty (36 months) refer detailed requirements to your local Siemens Sales representative.

Cancellation Charges

A minimum charge of 10% of the total order value will be assessed for any order cancellation. For any order less than \$5,000 (e.g. parts order), a minimum charge of \$500 will be assessed for any order cancellation. A charge of 15% of the total motor price will be assessed if an order is canceled after it has been released for engineering and drafting, whether or not the drawings have been completed and/or submitted for approval.

Advantage Series TEFC general purpose medium voltage motors are built with our exclusive, leading-edge, die cast aluminum rotor designs in a wide range of standard frame sizes and ratings. These motors significantly reduce operating costs and pay for themselves in a short time through energy savings. These industry workhorses are ideal for uses in the Power Generation, Pulp & Paper, Water & Wastewater, Chemical industries, etc

NEMA Premium® is a certification mark of the National Electrical Manufacturers Association.

1. NEMA Premium® efficiency is only met at 250HP and above.
2. Inproseal® (K91: DE, K92: NDE)
3. Nameplate options (Y80: Derate, Y82: Auxiliary, K44: Replica of main, D44: Division 2)

Frame and End Shields

The SIMOTICS Advantage Series motor features a cast iron frame, end shields, and a durable main terminal box with a removable bottom plate for easy installation. High strength zinc-plated hardware, epoxy paint, and stainless-steel nameplate are features that provide exceptional structural integrity, resistance to rust & corrosion, and superior capability for applications in harsh environments.

Rotor and Stator Windings

An exclusive, leading-edge die cast aluminum rotor bar design improves efficiency and reduces operating costs. Each die cast aluminum rotor assembly is dynamically balanced for extended bearing life and includes a high-strength carbon steel shaft for maximum rotor performance.

The stator is manufactured with premium electrical C5 grade steel lamination and copper electrical magnet wire that furthers the reduction in electrical losses.

Bearings

Single shielded bearings on both drive end & non-drive end are designed for easy serviceability and protection against contaminants.

Insulation

449 Advantage motors utilize Siemens proprietary MiCLAD™ form wound stator insulation system which provides the ultimate in electrical protection, as well as mechanical and electrical strength for long service life. It features a highly engineered, sealed epoxy mica design for optimum electrical and ambient operating performance and meets or exceeds NEMA MG1-20 sealed winding standards. With a Class F non-hygroscopic insulation system, NEMA Class B temperature rise, this system provides an extra margin of thermal life as well.

Other Advantage motors utilize Siemens proprietary MICALASTIC® insulation system which is a vacuum pressure impregnation (VPI) insulation free of gaps or voids. The insulation ensures optimal operating electrical conditions for a long service life. These Advantage motors meet the requirements for MG1 Part 31 with a 6kv rated insulation system. This standard ensures that motors are protected in the event of an overvoltage.

Cooling System

All fans are locked and keyed to the shaft and are bi-directional except for the 2 pole S449, 5011, 5810, and SH400. Its low-inertia design reduces windage losses, improves airflow, reduces noise and provides dependable cooling. Cast iron fan covers are provided for all frame sizes.

7-4-1 Modifications and Accessories – Introduction

Siemens offers a wide selection of options to increase the suitability of our motors to the customer's specific needs. A specific device manufacturer should not be specified unless it is absolutely the only one that is acceptable for that application. The complete specification of the needed device without supplier identification is the preferred specification arrangement. The insistence on a specific supplier of a device can result in time delays since the item must be special ordered.

Ordering Instructions:

1. Select an Advantage Series stock motor from the **SIMOTICS Advantage Series Standard Features Section**. (Note MLFB Article Number)
2. Select applicable Option(s). (Note Order Code, Order Code Position and List Price Adder)
3. Construct new Part Number and List Price. (See example below)
 - a) If the Order Code Position is 12, replace the figure(s) or letter(s) at the same position in the stock motor **Part Number** with the **Custom Option Order Code**.
 - b) If the Option Order Code Position is Z, add a '-Z' to the end of the stock motor **Part Number**. Then add a space followed by the **Custom Option Order Code** in alphanumerical order. Each order code will be followed by a '+' until the final one.

Custom Options Pricing Example: 250HP, 3600RPM, 2300/4000V, 449TS, Die Cast Aluminum Rotor, with feet, without flange, PTC thermistors-1/phase (3 embedded temperature sensors for tripping), Anti-Fungal Treatment with tropicalization moisture and F-2 Assembly.

Base List Price: \$44,255 Part Number: 1LA34642AA903AA1-Z L1C

List Price Adders:

| | | |
|----------------------------|---------|--|
| (3)PTC Thermistors-1/phase | \$1,707 | Order Code A15 , Order Code Position Z |
| Anti-Fungal Treatment | \$1,541 | Order Code S00 , Order Code Position Z |
| F-2 Assembly | \$1,124 | Order Code K09 , Order Code Position Z |

Total List Price: \$48,627 **NEW Part Number:** 1LA34642AA903AA1-Z A15+K09+L1C+S00

Delivery: Please contact Siemens for delivery

Altitude

TEFC motors are designed to operate within Class B temperature rise limits when operated at rated horsepower at altitudes up to 3300 feet. For altitudes from 3301-5000 feet, utilization to Class F temperature rise limits are enacted. Please consult Siemens for altitudes above 5000 feet. Standard motors will operate at their rated service factor at altitudes above 3300 feet at the corresponding ambient temperatures as shown in the table below.

Ambient

TEFC motors are designed to operate within certain maximum temperature rise limits when the motor is operated in ambient temperatures from -25°C to 40°C. For Class B rated motors, the limit is 80°C rise by resistance at a 1.0 service factor.

| Maximum Altitude | Ambient Temperature |
|------------------|---------------------|
| 3300 ft. (1000m) | 40°C (104°F) |
| 6600 ft. (2000m) | 30°C (86°F) |
| 9900 ft. (3000m) | 20°C (68°F) |

Assembly- Mounting Positions

As standard, these motors are supplied for horizontal, foot mounting and NEMA F-1 assembly. F-2 assembly, **K09**, is available as an option.

Mounting Positions

Bearings – Insulation

As standard, all motors have the non-drive end bearing insulated. Both Bearings Insulated, add option **L18**.

Bearings – Roller Bearings

Motors having roller bearings, option **K20**, require a minimum radial load. Use of these motors in direct connected applications is discouraged to avoid excessive drive end bearing noise and/or reduced bearing life.

Bearing Protective Devices- Temperature

Temperature Detectors (RTD's) - Bearing RTD's are available per option **R79**. Stick-type are available for anti-friction bearings. The standard bearing RTD is a tip sensitive device consisting of a probe with a hermetically sealed tip inside of which is a resistance element in the form of a coil. The remainder of the assembly consists of a protective stainless-steel sheath to which the probe is attached. The RTD leads are brought internally to a terminal block in an auxiliary terminal box. No additional insulation within sheathing is offered besides the insulation on the lead wire itself. PT100 RTD's come standard on all frames 5011 and up.

Couplings, L17

Includes mounting only of shrink-fit, customer-supplied coupling which has been finish-bored and key-seated to Siemens standard shaft dimensions for this product. Couplings are to be sent freight prepaid to arrive at the factory at by date specified by Siemens. This is available for the 449 frame only.

Direction of Rotation

Ratings indicated as "Uni-directional" (2P: S449, 5011, 5810, SH400) will be listed CW as standard. All other ratings are Bi-directional. For a specific direction of rotation to be included, please choose from below.

| Code | Option Description |
|------|---|
| K97 | Clockwise Viewed from Drive End |
| K98 | Counter-Clockwise Viewed from Drive End |
| K99 | Bi-Directional Rotation (when applicable) |

Export Packaging- Sea Freight Packaging

For motors to be export packaged per Siemens standard overseas shipment. Please add 5 working days to the standard lead-time for export boxing. See Shipment Terms & Packaging for additional information.

FS1.5 Fab Steel Terminal Box, L70

This generously oversized NEMA Type I terminal box has 13,900 cu.in. of volume for 5011 frames and above. This additional space makes it easy to connect and service your motor. Made of durable fabricated steel, this box also includes a removable bottom plate making it easier to make field connections. The box is rotatable in 90° increments to help ensure the proper entry point for each application. For safety, every FS1.5 box comes standard with a copper blowout panel as well.

Hazardous Location and Temperature Code

Class I: Potential explosive flammable gases or vapors in the air

Division II: Hazardous material exists only in the case of fault situations (leaky valve, burst pipe, faulty equipment, etc.)

Group B: Hydrogen; **Group C:** Ethyl and ether vapors present; **Group D:** Gasoline, petroleum, naphtha, alcohols, acetone lacquer solvent vapors and natural gas present

T3: Max. surface temperature not to exceed 200°C (392°F); **T2D:** Max. surface temperature not to exceed 215°C (419°F), 5011 on VFD only

IEEE 841 Standard – 2009, R61

This standard applies to premium-efficiency TEFC's up to 500 horsepower and 4000 volts. It is used in petroleum, chemical, and other severe-duty applications. The purpose of this standard is to define specifications for mechanical and electrical performance, corrosion protection, electrical insulation systems, and testing. For 2 pole motors, exception is taken to twice speed or twice frequency vibration.

Mounting, Flange

The drive end bearing housing can be replaced with flange mounting for direct coupling to the driven equipment. Flanges are supplied with feet for use in the horizontal orientation. The S449 & 5810 frames must use the motor feet as support with flange mounting.

C-Face: The NEMA C-face has threaded holes in the flange and the mounting hardware will be introduced from the driven equipment side. The C-face can be added to a stock motor as a modification where applicable.

D-Flange: The NEMA D-flange will have through holes that are unthreaded. The D-flange can be added to stock motors as a modification where applicable.

Nameplates

There are multiple different options available when it comes to including specific information on your nameplates, which are listed in the table below.

| Code | Option Description |
|------|---|
| K44 | Additional Replica of Main Motor Nameplate |
| Y80 | Derate Nameplate (SF, Altitude, or Ambient Temperature) |
| Y82 | Auxiliary Nameplate (Max. 40 Characters) |
| D44 | Division 2 Nameplate |

Noise – Low Noise Fan Housing

Noise level reductions vary by frame and speed. Consult your Siemens Sales representative for more information.

Paint

449

Siemens standard finish paint consists of the following:

Primer: Interior and exterior coated with epoxy or epoxy ester primer (subcomponent-specific, determined by vendor). Dry film thickness*: 1-4 mils (25-100 μm)

Finish Coat: One coat of two-part polyamide epoxy applied to all visible surfaces of the motor except shaft extensions, oil sight glass, machined surfaces, etc. Dry film thickness*: 4-8 mils (100-200 μm)

Paint is allowed to dry for at least four hours before handling (or dried for one hour, then baked for 30-60 minutes at 200° F). Bakes if air temperature is below 55° F.

Total system dry film thickness*: 5-12 mils (130-305 μm)

Standard Color: RAL 7030 (Grey)

5011, 5810, SH400

Siemens standard finish paint consists of the following:

Primer: Single component acrylic- or epoxy or epoxy resin ester dipping primers, redbrown (water-dilutable or solvent-based) or two component epoxy resin primers RAL 3012 beige red (solvent-based) Dry film thickness*: 1-2.4 mils (25-60 μm)

Finish Coat: Single component hydro alkyd resin lacquers (water-dilutable) applied to all visible surfaces of the motor except shaft extensions, oil sight glass, machined surfaces, etc. Dry film thickness*: 1.8-3.6 mils (45-90 μm)

Total system dry film thickness*: 4-4.4 mils (100-110 μm)

Standard Color: RAL 7030 (Grey)

Standards: ISO 2178, 8501-1; DIN 67530; DIN EN ISO 12944-5; DIN EN ISO 12944-2

*Measurement and acceptance criteria are per SSPC-PA 2. Film thickness levels have been developed in accordance with the recommendations of the paint manufacturer.

Provisions for Accelerometer/Velometer, R08

Choosing this option provides a device that is threaded into the motor frame with the purpose of providing a flat surface for mounting a velocity or acceleration-based vibration monitoring device. Two mounting surface devices are provided (DE & NDE).

Provisions for Vibration Sensors, R05

The sensor is intended for general purpose seismic vibration measurements and utilizes RMS velocity units to monitor vibration which responds to destructive vibration by shutting down the motor when the vibration trip level is exceeded, minimizing the risk of devastating damage and extensive repairs and downtime. A seismic measuring device like this one is good for rolling-element bearings and can even help detect vibration that does not originate at the shaft. Examples of this type of vibration are footing or foundation problems, piping resonances that are coupled to the motor and bearing related wear among other examples.

Robert Shaw Vibration Switch, R03

To help monitor vibration in a direction perpendicular to the device mounting base, this option is a sensitive device that measures shock present on a motor. When the vibration level exceeds "normal" by a pre-selected amount, the switch closes and provides a system warning or allows for a shutdown circuit to minimize potential damage to the motor and application.

7-4-2 Modifications and Accessories – Technical Details

Export Packaging- Sea Freight Packaging

For motors to be export packaged, **S98**, per Siemens standard overseas shipment. Please add 5 working days to the standard lead-time for export boxing. See Shipment Terms & Packaging for additional information.

Sealed Leads

Sealing the leads involves applying a compound between the motor frame and main terminal box. This compound provides a seal that is often used to help restrict the passage of gases, vapors or flames at atmospheric pressure and at normal ambient temperatures.

Shaft Seal

For additional shaft seal options, please choose from the list below.

Shipment Terms & Packaging

Standard shipment terms are FCA Loaded, Norwood, OH factory, freight collect with our standard domestic packaging only. Contact your local Siemens Sales representative for other details.

Stator- Treatment

All motors, 2300 volt and above, have form wound stator coils with a Siemens' standard VPI insulation system. An Anti-Fungal Treatment, **S00**, is offered for the stator in humid areas, which utilizes a tropicalization moisture for protection.

Stator- Protective Devices for 449 Frame

A. **Thermistors, A15, A16, A25** - The thermistors used are positive temperature coefficient (PTC) sensors. They are embedded in the end turns of the windings in the stator. A set of sensors consists of three sensors, one per phase. The resistance of the sensor remains relatively low and constant over a wide temperature band and increases abruptly at a predetermined temperature. When this occurs, the sensor acts as a solid-state thermal switch and, when connected to a matched solid-state electronic switch in an enclosed control module, it de-energizes a pilot relay. The relay, in turn, opens the motors control circuit or the control coil of an external line break contactor to shut down the protected equipment.

B. **Thermostats, R16** - Thermostats use a snap-action, bi-metallic, disc type switch to open or close a circuit upon reaching a preselected temperature. When heated, the stresses in the disc cause it to reverse its curvature instantaneously when the bi-metal reaches a predetermined temperature. The action of the disc opens or closes a set of contacts in an energized control circuit. Thermostats are available with contacts for normally open or normally closed operation, but the same device cannot be used for both. Note: These devices are pre-calibrated by the manufacturer and are not adjustable.

Routine Test

This test series defines the tests and data collection to meet the NEMA MG 1 and IEEE 112 requirements.

| Calculations and data forms used to determine results of testing from raw data are per IEEE 112 and are retained, not reported. | |
|---|--------|
| Certified Final Test Report forms submitted to the customer are per IEEE 112, Annex B. | |
