

SIRIUS Circuit Breakers up to 100 A

Feeder system

Overview

The infeed system is a convenient means of power supply and distribution for a group of several circuit-breakers or complete load feeders.

These devices are available in the SIRIUS modular system up to 5.5 kW at AC 400 V. For higher power ratings, circuit-breakers of size S0 with screw connection (up to 11 kW at AC 400 V) can be integrated into the system.

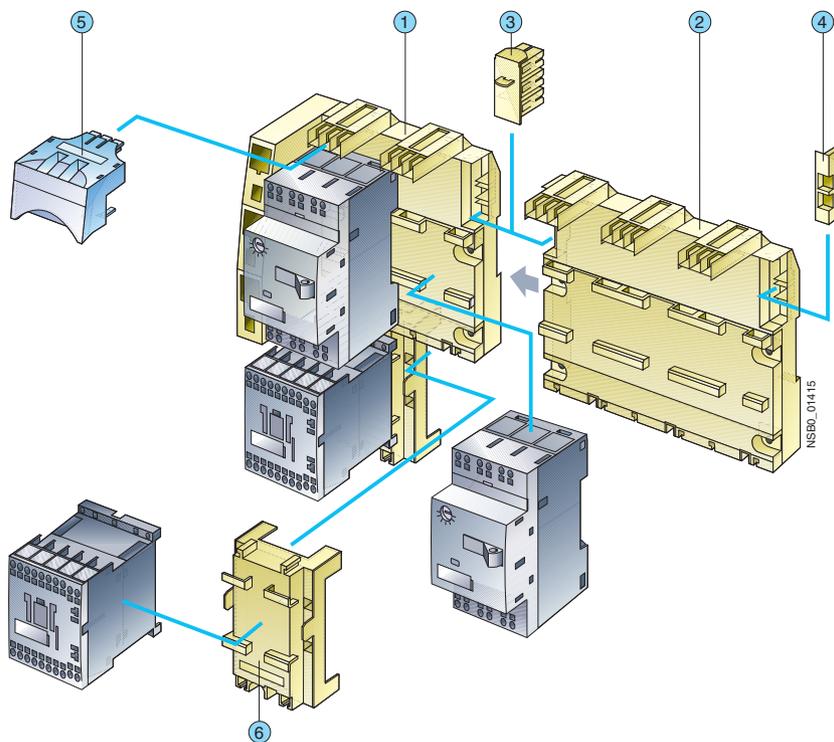

Design

The system is based on a basic module complete with a lateral incoming unit (3-phase busbar with infeed). This incoming unit with Cage Clamp terminals is mounted on the right or left depending on the design and can be supplied with a maximum conductor cross-section of 25 mm² (with end sleeve). A basic module has two sockets onto each of which a circuit-breaker can

be snapped. Expansion modules are available for extending the system (3-phase busbars for system expansion). The individual modules are connected through an expansion plug.

Electrical connection between the 3-phase busbars and the circuit-breakers is implemented through plug-in connectors. The complete system can be mounted on a 35 mm standard rail to EN 50022 and can be expanded as required up to a maximum current carrying capacity of 63 A.

The system is mounted extremely quickly and easily thanks to the simple plug-in technique. Thanks to the lateral infeed, the system also saves space in the control cabinet. The additional overall height required for the infeed unit is only 30 mm. The alternative infeed possibilities on each side offer a high degree of flexibility for configuring the control cabinet: infeed on left-hand or right-hand side, ring infeed or infeed on one side and loop-through from the other side to supply further loads are all possible.

- ① 3-phase busbar with infeed
- ② 3-phase busbar for system extension
- ③ Extension connector
- ④ End cover
- ⑤ Cable connector
- ⑥ Contactor base

① 3-phase busbars with infeed

A 3-phase busbar with infeed unit is required for connecting the incoming supply. This module comprises one infeed module and 2 sockets which each accept one circuit-breaker. A choice of two designs with infeed on the left or right is available. The incoming supply is connected via Cage Clamp terminals. The Cage Clamp springs permit conductor cross-sections of up to 25 mm² with end sleeves. An end cover is supplied with each module.

② 3-phase busbars for system expansion

The 3-phase busbars for system expansion support expansion of the system. There is a choice of modules with 2 or 3 sockets. The system can be expanded as required up to a maximum current carrying capacity of 63 A. An expansion plug is supplied with each module.
