

Single-Phase Transformers

Safety, Isolating, Control and Mains Transformers

General data

Overview

4AM../4AT.. transformers

With the right transformer, the right voltage will be available at any conditions.

Our transformers are the right choice for each application: They work reliably, safely and worldwide under a wide range of different conditions.

Transformers are summarized in a user-friendly manner as:

- Isolating, control and mains transformers according to IEC 61558-2-4, -2-2, -2-1 or
- Safety, control and mains transformers according to IEC 61558-2-6, -2-2, -2-1

Note:

Mains transformers with ≤ 50 V on the output side are, in the case of SIRIUS transformers, always designed as safety transformers.

Our transformers provide optimal protection through high permissible ambient temperatures up to 40°C or 55°C , a high short-time rating in the case of control transformers, fuseless design and thanks to their compliance with safety standard IEC 61558, "Safety inside".

Connection methods

The transformers 4AM../4AT.. are available with screw terminals/flat connectors.

Screw terminals

Flat connectors

The terminals are indicated in the corresponding tables by the symbols shown on orange backgrounds.

Support function

The transformers 4AM../4AT.. can also be ordered with the help of an online configurator.

Configurator available in the Industry Mall

The online configurator is indicated in the corresponding tables by the symbol shown on an orange background.

Note:

The Article No. scheme is presented here merely for information purposes and for better understanding of the logic behind the article numbers.

For your orders, please use the article numbers quoted in the catalog in the Selection and ordering data.

Benefits

- High short-time rating of the SIRIUS transformers: Lower transformer rated power for a large number of contactors
- Suitable for "fuseless design": The small inrush current means that "circuit breakers for motor protection" can also be used on the primary side.

- approvals for the USA and Canada: can be used worldwide without any problems
- Comprehensive type spectrum supplied from stock: rapid availability

Application

Transformers are used in industrial machines, process engineering, heating and air-conditioning equipment, etc., for supplying control and signaling circuits, when:

- Several electromagnetic loads (e.g. contactors) have to be controlled
- Control and signaling devices are used outside the control cabinet
- The operational voltage for the loads differs from the available voltage level
- Voltage matching for machines and installations with electrical isolation or as an autotransformer

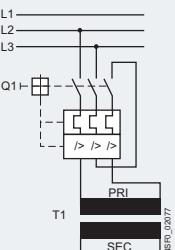

Generally our transformers are used for voltage matching of electrical devices, e.g. in communications, medical engineering and domestic appliances.

Single-Phase Transformers

Safety, Isolating, Control and Mains Transformers

General data

Technical specifications

General data			
Transformers	Type	4AM	4AT
• Version		EI core	
• Performance range (with IP00)	kVA	0.025 ... 2.5	> 2.5 ... 16
• Approvals		c _{flame} us	
Voltage range	V	≤ 690	
• Approvals for USA, Canada	V	≤ 600	
Rated frequency	Hz	50 ... 60	
Thermal class		B	H
• Acc. to UL/CSA		CLASS 130	CLASS 180
Ambient conditions		Protection against harmful ambient conditions: Complete impregnation in polyester resin Climate-proof for installation in rooms with an external climate according to DIN 50010	
Rated ambient temperature			
• At rated power	°C	40	55
• Maximum value (after power reduction according to load characteristic ¹⁾)	°C	80	
• Minimum value	°C	-25	
Relative air humidity			
• Mean value up to	%	80	
• Maximum value for 30 days/year	%	95	
• At 40 °C occasionally	%	100	
Protection class		I	
Degree of protection			
• Without enclosure		IP00	
Installation altitude		Up to 1 000 m above sea level (above this, power reduction is necessary)	
Protective devices			
• External		The transformers can be protected against short circuits and overload on the primary and secondary side with motor starter protectors, see circuit diagram .	
			
		For reliable protection against short circuits, overload and touch, the cables between the output terminals of the transformer and the load must have a negligible line impedance. For more details see DIN VDE 0100 (Erection of low-voltage systems) Part 410, Part 520 (particularly section 525) and Part 610.	
		Assigned protective devices (see "Primary-side short-circuit and overload protection with motor starter protectors" on pages 15/13 and 15/14)	
Connection methods		The permissible conductor cross-sections are assigned to the specified terminal types. Refer to DIN VDE 0298-4 and IEC 60204 (VDE 0113-1) for the permissible conductor cross-sections for the specified current according to the installation type. The terminals used are finger-safe according to EN 50274.	
• Terminal arrangement ¹⁾			
• Terminal versions and connectable cross-sections ¹⁾		Other terminal sizes than standard versions on request.	
Mounting position		The permissible mounting position for each version is shown in the "Project Planning Aids" ¹⁾ .

¹⁾ $P_{\text{short-t.}}$ applies to up to 300 contactor operations per hour. The specified power is the typical maximum short-time rating.

Single-Phase Transformers

Safety, Isolating, Control and Mains Transformers

SIRIUS 4AM
safety, mains and control transformers

Overview

- According to IEC 61558-2-6, -2-1, -2-2
- Ceiling**
- $t_a = 40^\circ\text{C}/\text{B}$
- 50/60 Hz AC
- Degree of protection IP00
- For more products see [Industry Mall](#) and [Interactive Catalog CA 01](#) or www.mdexx.com.

SIRIUS 4AM single-phase transformer
with screw terminals/flat connectors
