

SITOP power Standard universal line

Summary

Application

The SITOP power universal line of regulated power supplies were developed for applications with high technical requirements.

Apart from industrial applications, the universal line is also suitable for operation on the public low-voltage system, for example in building automation.

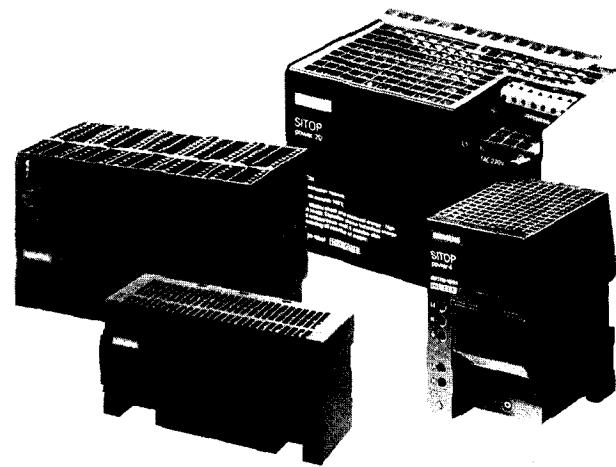

Fig. 4/1 universal line power supplies

Common features

- No-load and continuous short-circuit protection
- SELV output voltage to EN 60950
- Can be connected in parallel to increase power rating
- EU conformity, high interference immunity for industrial applications (EN 50082-2), low spurious emission for public system (EN 50081-1), RI suppression Class B
- Type testing by German Technical Inspectorate (TÜV), CE marking
- UL/cUL (CSA) listed (UL 508)

Features of the uni E24/3.5

- Dimensions and design match the SIMATIC S7-200
- Input voltage single-phase 120/230 V (120 V AC selectable by wire jumper)

Features of the uni EG24/2.5, uni EG24/4, uni EG24/10

- Dimensions and design match the SIMATIC S5-95/100U (uni EG24/2.5, uni EG24/4)
- Dimensions and design match the SIMATIC S7-300 (uni EG24/10)
- Input voltage single-phase, wide range 93 to 264 V AC
- Can also be operated with 110 to 350 V DC
- Green LED to indicate 24 V OK

Features of the uni E24/20

- Dimensions and design as for three-phase SITOP power 20 (e.g. type basic 5D24/20)
- Input voltage 230 V single-phase
- Green LED to indicate 24 V OK
- Red LED to indicate overload and short-circuit
- Output voltage settable over the range 24 to 28.8 V

Design of the uni E24/3.5

The power supplies can be snapped onto a 35 mm DIN rail (DIN EN 50022-35x7.5).

Design of the uni EG24/2.5 and uni EG24/4

The power supplies can be snapped onto a 35 mm DIN rail (DIN EN 50022-35x15), or can be screwed directly onto a level surface.

Design of the uni EG24/10

The power supplies can be snapped onto a 35 mm DIN rail (DIN EN 50022-35x15), and onto an S7 rail by removing the adapter fitted to the unit.

Design of the uni E24/20

Can be installed on the mounting plate provided. The mounting plate is screwed onto a level surface, and the power supply is simply hooked onto the plate and secured with two screws.

Installation note

All units of the universal line are intended for building in; they should be installed vertically in such a way that the air can enter from below through the ventilation slots at the bottom of the units and flow out through the ventilation slots at the top of the units (about 10 cm clearance above and below the units).

With a different mounting orientation (at the user's risk) the ambient temperature should not exceed + 45 °C, and the load current approx. 60 % of rated current.
