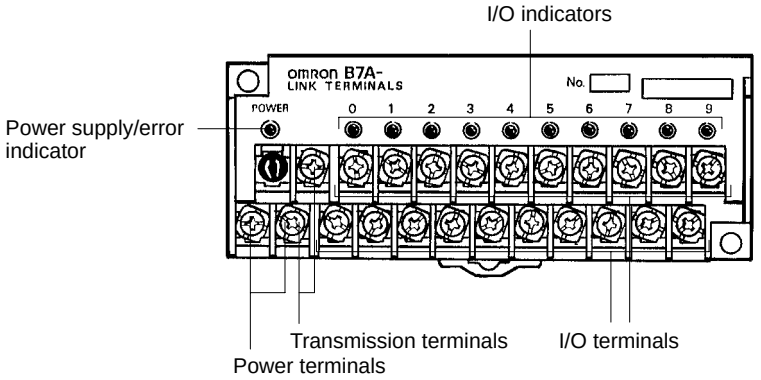
Output Models

Item	Screw terminal models	Modular models
	B7A-R10SC01	B7A-R10MC
Output configuration	NPN open collector	
Current consumption (see note 1)	80 mA max. with all output terminals ON	40 mA max. with all output terminals ON
Operating voltage range	12 to 24 VDC	
Rated load voltage	5 to 24 VDC	
Output residual voltage	0.8 V max.	
Output current	Sync. current, 100 mA max./point	Sync. current, 50 mA max./point
Error processing	HOLD	
Mounting strength	No damage when 49-N pull is applied for 1 min each in all directions (except in direction of DIN track)	---
Terminal strength	No damage when 49-N pull is applied for 1 min each in all directions	---
Tightening torque	0.78 to 1.18 N • m	---
Output logic (see note 2)	---	Active high (N/P terminals open) Active low (N/P terminals connected to 0 V)
Weight	Approx. 110 g	Approx. 21 g

Note: 1. Consumption when all 10 points are ON. Excludes external load current and error load current for Output Terminals.

2. Refer to *I/O Status* on page 102 for the relationship between the output logic and output ON/OFF status of the B7A.

Nomenclature



Indicator Operation

Indicator		Function
POWER (Input Terminal)	G	Lit when power is supplied and the Terminal is operating.
	N	Not lit when power is not supplied.
POWER/ERR (Output Terminal)	G	Lit when power is supplied and the Terminal is operating without error.
	R	Lit during transmission errors.
	N	Not lit when power is not supplied.
I/O	O	Lit when the input signals are ON.
	N	Not lit when the signals are OFF.

Note: G: Green indicator lit; R: Red indicator lit;
O: Orange indicator lit; N: Not lit

Recommended Solderless Terminals

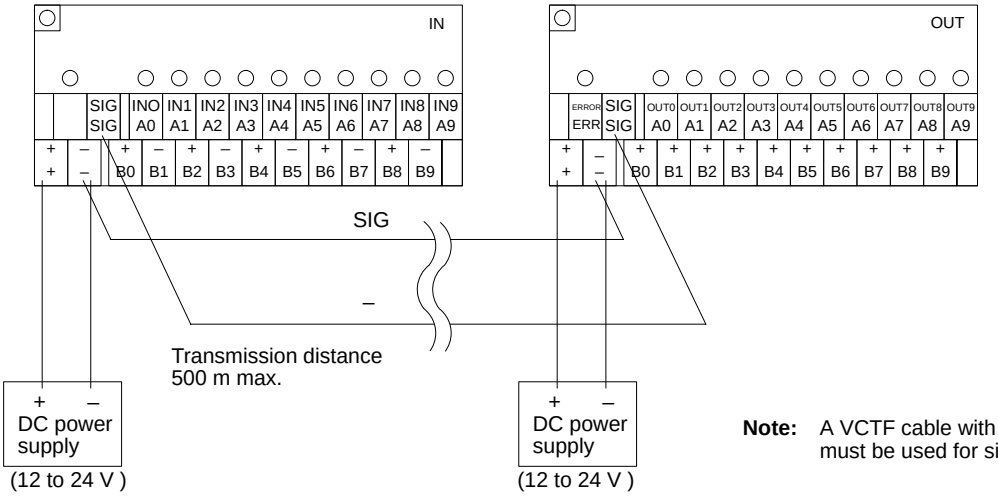
Wire	JIS specifications
0.75 mm^2 (AWG#18)	RAV 1.25 to 3.5 (vinyl-insulated round wire) or RAP 1.25 to 3.5 (nylon-insulated round wire)
1.25 mm^2 (AWG#16)	

Operation

■ Power Supply

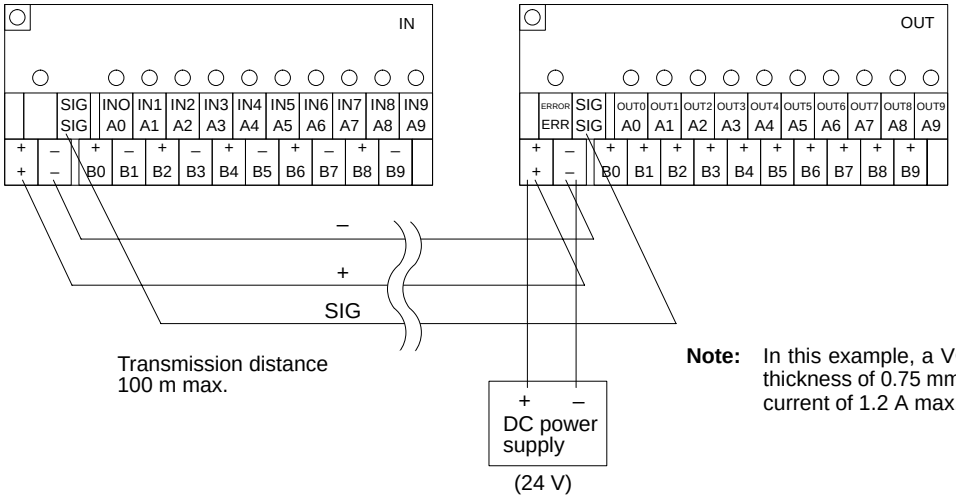
Screw Terminal Models

Connection of Independent Power Supplies



Note: A VCTF cable with a thickness of 0.75 mm^2 min. must be used for signal transmission.

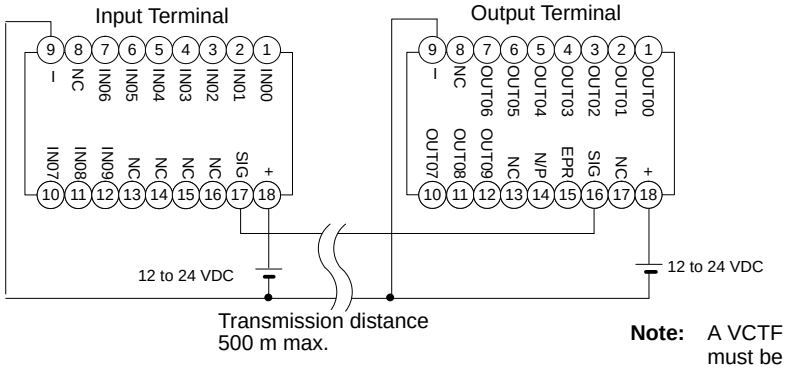
Connection of Single Power Supply to Input or Output Terminal



Note: In this example, a VCTF transmission cable with a thickness of 0.75 mm^2 min. is used, through which a current of 1.2 A max. can be transmitted.

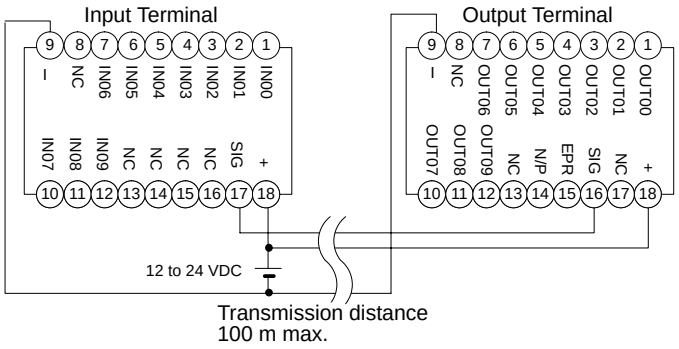
Modular Models

Connection of Independent Power Supplies



Note: A VCTF cable with a thickness of 0.75 mm^2 min. must be used for signal transmission.

Connection of Single Power Supply to Input or Output Terminal



Note: In this example, a VCTF transmission cable with a thickness of 0.75 mm^2 min. is used, through which a current of 1.2 A max. can be transmitted.

Dimensions

Note: All units are in millimeters unless otherwise indicated.

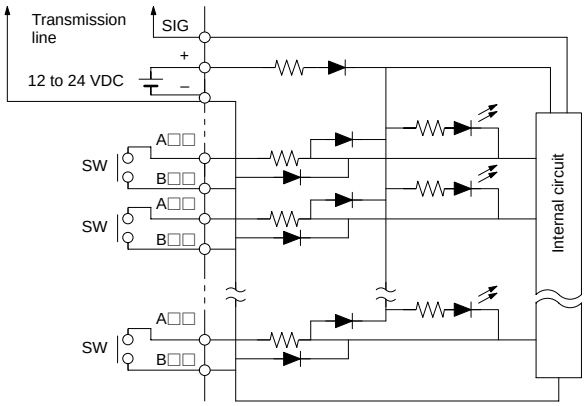
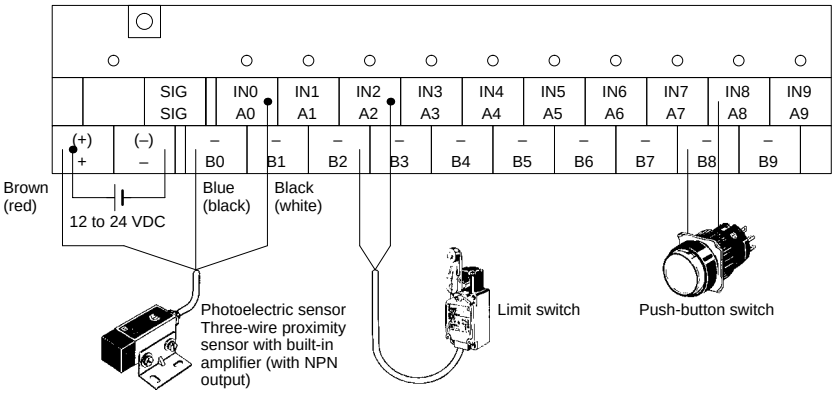
■ Internal Circuits and Terminal Arrangement

Screw Terminal Models

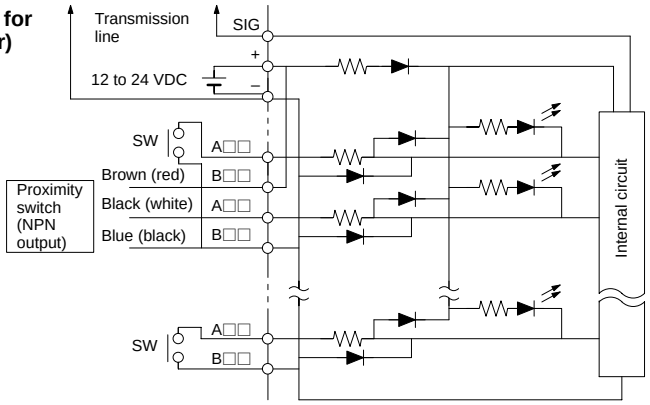
B7A-T10S1
(Input, Active Low)



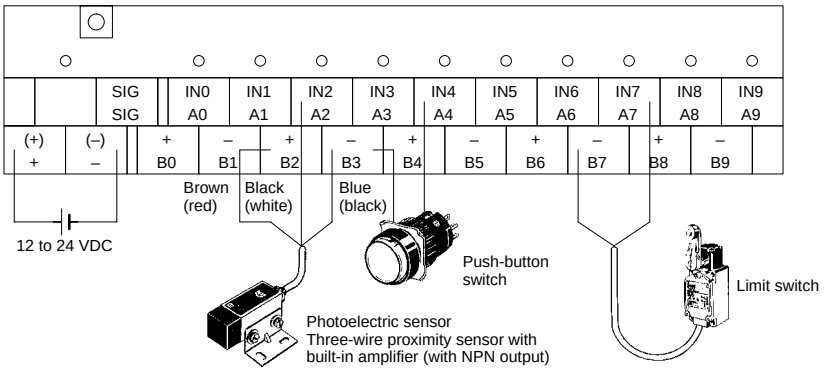
Note: A sensor with two-wire output cannot be connected.



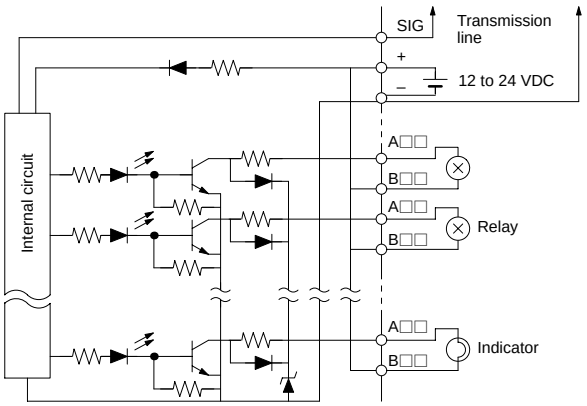
B7A-T10S3 (Input, Active Low for NPN 3-wire Sensor)



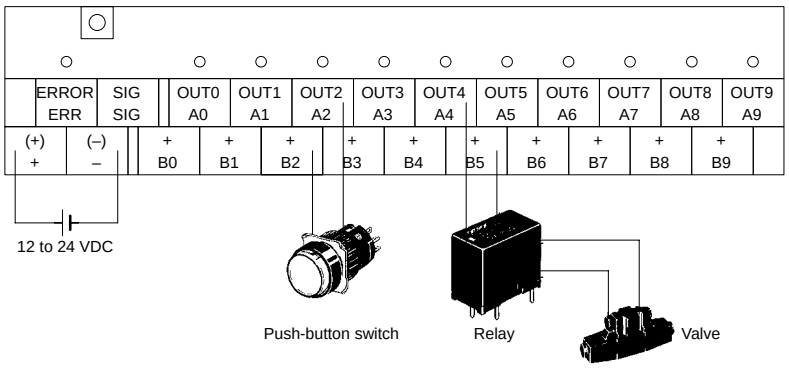
Note:
1. A sensor with two-wire output cannot be connected.
2. The wire colors have been changed in accordance with the revision of the Japanese Industrial Standards for photoelectric sensors and proximity sensors. The colors in parentheses refer to the old colors.
3. Do not short-circuit the SIG terminal with the positive power supply terminal, negative power supply terminal, or a B□□ terminal, otherwise the internal elements of the B7A will be damaged and no transmission will be possible.



B7A-R10SC01 (Output, NPN Open Collector)



Note: Do not short-circuit any output A terminal with the corresponding B terminal, otherwise the internal elements of the B7A will be damaged.



Modular Models

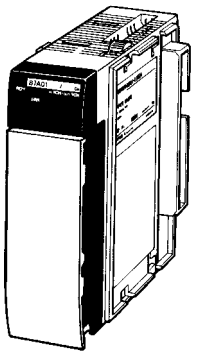
OMRON

B7A Interface Units for CQM1/CQM1H PLCs

CQM1-B7A□□

Ideal for reducing wiring between compact CQM1/CQM1H PLCs and I/O devices installed up to 500 m away

- Mount like any other PLC Unit to reduce wiring and save space.
- Select from the following 5 types according to the number of I/O points required: models with 16 inputs, 16 outputs, 32 inputs, 32 outputs, or 16 inputs and 16 outputs.
- Use like an I/O Unit to connect the CPU Unit to I/O devices such as switches and lamps in remote locations. No special consideration of communications is required.
- Both normal I/O delay and short I/O delay available with each model.



Ordering Information

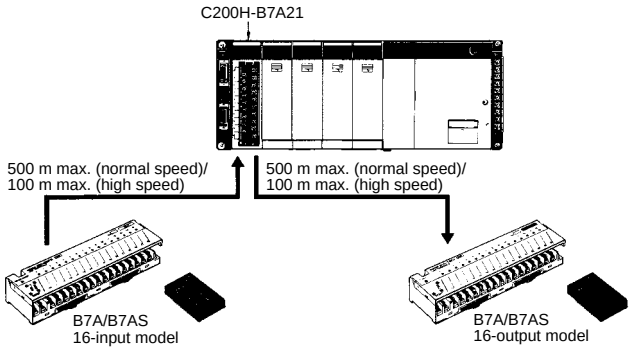
Note: 1. When using the C200H-B7A01 with a C200HS/C200H PLC, use a Backplane with "-V□" at the end of the model number. Normal operation will not be possible if any other type of Backplane is used.
The C200H-B7A01/12/21/22 cannot be used with a C200H-CPU01/02/03.

2. The maximum transmission distance varies depending on the wiring method.

3. The value for the external power supply does not include the power required by the B7A Link Terminals.

Installation

■ Example of Connection to a B7A Link Terminal (C200H-B7A21)



Operation

Note: The undermentioned is common for all B7A-series Link Terminals.

■ Connection of B7A and Programmable Controller

Each terminal of the B7A should be used for only single signal transmission without a transmission host. Therefore the B7A cannot be connected to OMRON's SYSMAC BUS Remote I/O System. To transmit signals from the B7A to a PLC, connect the B7A's terminals to an I/O Unit mounted on the PLC.

Refer to *B7A-series Models with PLC Connectors and Connecting PLCs* on page 39 for details.

■ Peripheral Circuits of Modular Model

Input Interface Circuit

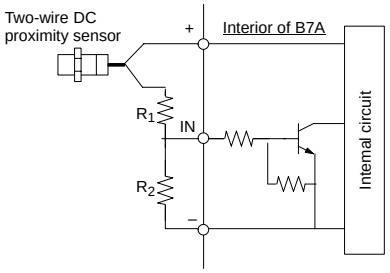
The modular model has a minimum ON discrimination voltage of 2.2 V and a maximum OFF discrimination voltage of 0.8 V, which are suitable for TTL circuits. If sensors are used for input, the following input circuits are required.

Two-wire DC Sensor Input

If a two-wire DC sensor is used for input, current limit resistor R_1 and leakage current diverter R_2 are required as shown in the diagram below. The following table lists R_1 and R_2 values for the E2E-XD-N Two-wire DC Proximity Sensor (with a current leakage of 0.8 mA maximum, a residual voltage of 3 V maximum, and a minimum control output current of 3 mA).

Input Interface (E2E-XD-N)

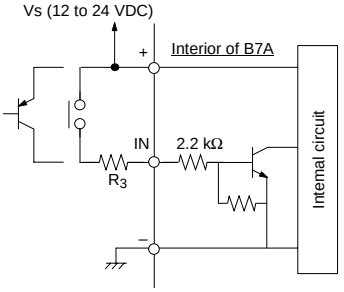
Supply voltage	12 V	24 V
R_1	1,800 Ω	5,600 Ω
R_2	820 Ω	820 Ω



Input with B7A and Common Power Supply (12 to 24 VDC) (10-point Modular Model only)

The 10-point modular model has an input voltage range of 0 to 5 VDC. If a common power supply is connected, current limit resistor R_3 is required as shown in the diagram below. Use the following formula to calculate the value of R_3.

$$R_3 = \frac{\text{Supply voltage } V_S \text{ (V)} - 1.4 \text{ (V)}}{\text{Input current } (2 \times 10^{-3} \text{ (A)})} - 2{,}200\ (\Omega)$$



Note: The 16-point module's input voltage range is 0 V to the power supply voltage. Therefore no current limit resistor is required.

Noise Protection Circuits

If there is a possibility of noise interference from the power supply, input, and/or output lines, add the following noise protection circuits.

Power supply noise protection circuit	Input noise protection circuit	Output noise protection circuit
 R: 10 to 20 Ω (1/8 W min.) C: 33 μF min. with a dielectric strength of 50 V min.	 C: 0.1 μF min. R: Photocoupler input current limit resistor	 R: Photocoupler input current limit resistor ZD: V_{ZD} = 36 V (with a power consumption of 1 W min.)
	 ZD: V_{ZD} = 36 V (with a power consumption of 1 W min.)	 ZD: V_{ZD} = 36 V (with a power consumption of 1 W min.)

■ Transmission Errors and Output Signals

Transmission errors occur in the following cases:

- When the signal or 0-V wire is disconnected.
- When the signal is influenced by high-level external noise or the signal is excessively deformed because the length of the transmission path is more than the permissible distance.
- When the supply voltage to the Link Terminals are not within the operating voltage range (12 to 24 V ±10%).
- Immediately after the Link Terminals are turned on. (An error is reset within 300 ms after the power is turned on.)

Output Signals

HOLD: When an error occurs, the output signals just before the occurrence of the error will be maintained.

LOAD OFF: When an error occurs, all output signals will be turned OFF.

Automatic Reset

When the error is corrected, the Link Terminals will automatically reset themselves.

For relays and solenoids ON: Operates. OFF: Reset.	Module	NPN open collector	B7A-R6A52 B7A-R6A57 B7A-R10MC	For PLC input ON: PLC is ON. OFF: PLC is OFF.				For relays and display terminal ON: Operates. OFF: Reset.				For IC (TTL, CMOS) ON: Input is Low. OFF: Input is High.	PLC connector	NPN open collector	B7A-R6A13 B7A-R6A18 B7A-R6A33 B7A-R6A38 B7A-R3A13 B7A-R3A18 B7A-R3A33 B7A-R3A38	For PLC input unit + common photocoupler input ON: PLC is ON. OFF: PLC is OFF.	
I/O ON/OFF Conditions

Input		Output			
		Screw terminal	Module		PLC connector
			Active high (N/P open)	Active low (N/P 0 V)	
Screw terminal	ON	ON	OFF	ON	ON
	OFF	OFF	ON	OFF	OFF
Module	ON	ON	OFF	ON	ON
	OFF	OFF	ON	OFF	OFF
PLC connector	ON	ON	OFF	ON	ON
	OFF	OFF	ON	OFF	OFF

Modular Models

Appearance	Model	I/O classification	I/O configuration	Error processing (see note 1)	Approved standards
	**B7A-T10M2**	Input	TTL input	---	---
	B7A-R10MC	Output	NPN open collector 50 mA/point	HOLD	

Note: HOLD: The previous output condition will be on hold when an error results.

Power Couplers

Appearance	Model	Classification	I/O delay time (typical)	Communications method	Transmission distance	Approved standards
	**B71AP-S1 (see note)**	Stationary Unit	Normal speed 19.2 ms	Unidirectional, time-division multiplex	8±1.5 mm (couplers)	U, CU
	**B7AP-M1**	Moving Unit				

Note: The B7AP-S1 Power Coupler has a gauge that is used to adjust the transmission distance between the B7AP-S1 and B7AP-M1 Power Couplers.

DeviceNet B7AC Interface Terminal (10 Input Points × 3)

Appearance	Model	I/O connection configuration	I/O delay time (typical)	Number of ports	Number of I/O points	Approved standards
	**DRT1-B7AC**	FA connector	Normal speed 19.2 ms High speed 3 ms	3	30 points (10 points × 3 ports)	U, CU, CE

B7A Interface Units for CQM1/CQM1H PLCs

Appearance	Model	I/O classification	Number of I/O points	I/O delay time (typical)	Error processing	Number of I/O Unit words allocated	Approved standards
	**CQM1-B7A21**	Input and output	Input: 16 points Output: 16 points	Normal speed 19.2 ms High speed 3 ms (See note 1.)	HOLD/LOAD OFF (input only) (See note 2.)	Input: 1 word Output: 1 word (total: 2 words)	---
	CQM1-B7A13	Input	32 points (16 points × 2 ports)		HOLD/LOAD OFF (See note 2.)	Input: 2 words	U, C
	CQM1-B7A12		16 points			Input: 1 word	
	CQM1-B7A03	Output	32 points (16 points × 2 ports)		---	Output: 2 words	U, C
	CQM1-B7A02		16 points			Output: 1 word	---
