CJ1W-V600C11/V600C12
CS1W-V600C11/V600C12

Create Flexible Systems Based on Distributed Control and Centralized Management

- These Units can be combined with OMRON's comprehensive lineup of PLC Units to create the optimum system.
- Operations are the same for Single-head and Double-head Units, enabling effective reuse of ladder programs.
- A simple test function allows communications status to be checked without any special programming in the CPU Unit to greatly speed up the system startup.
- Maintenance is greatly simplified by a power supply failure flag and a monitoring function for communications turnaround time and error codes.
