#### Data sheet

# Current monitoring relays CM-SRS.2 For single-phase AC/DC currents

The CM-SRS.2 is an electronic current monitoring relay that protects single-phase mains (DC or AC) from over- and undercurrent from 3 mA to 15 A. All devices are available with two different terminal versions. You can choose between the proven screw connection technology (double-chamber cage connection terminals) and the completely tool-free Easy Connect Technology (Push-in terminals).

#### **Characteristics**

- Monitoring of DC and AC currents (3 mA to 15 A)
- TRMS measuring principle
- One device includes 3 measuring ranges
- Over- or undercurrent monitoring configurable
- Hysteresis adjustable (3-30 %)
- Tripping delay  $T_V$  adjustable (0 s; 0.1-30 s)
- 3 control supply voltage versions
- Precise adjustment by front-face operating controls
- Screw connection technology or Easy Connect Technology available
- Housing material for highest fire protection classification UL 94 V-0
- Tool-free mounting on DIN rail as well as demounting
- 2 c/o (SPDT) contacts
- 22.5 mm (0.89 in) width
- 3 LEDs for status indication

## Approvals

### **Connection technology**

## Maintenance free Easy Connect Technology with Push-in terminals

Type designation CM-xxS.yyP

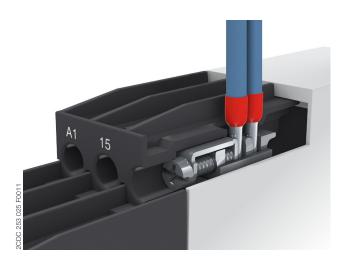

#### Push-in terminals

- Tool-free connection of rigid and flexible wires with wire end ferrule according to DIN 46228-1-A, DIN 46228-4-E
  - Wire size: 2 x 0.5-1.5 mm², (2 x 20 16 AWG)
- Easy connection of flexible wires without wire end ferrule by opening the terminals
- No retightening necessary
- One operation lever for opening both connection terminals
- For triggering the lever and disconnecting of wires you can use the same tool (Screwdriver according to DIN ISO 2380-1 Form A 0.8 x 4 mm (0.0315 x 0.157 in), DIN ISO 8764-1 PZ1 ø 4.5 mm (0.177 in))
- Constant spring force on terminal point independent of the applied wire type, wire size or ambient conditions (e. g. vibrations or temperature changes)
- Opening for testing the electrical contacting
- Gas-tight

Approved screw connection technology with double-chamber cage connection terminals

Type designation CM-xxS.yyS

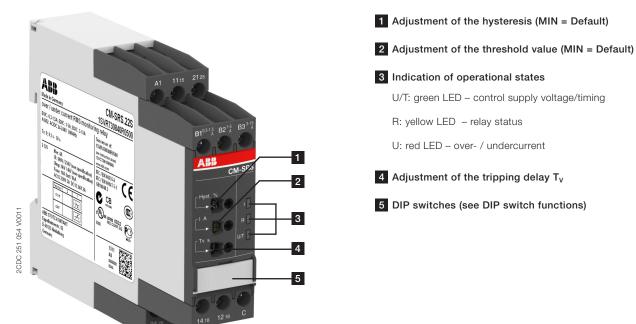

### Double-chamber cage connection terminals

- Terminal spaces for different wire sizes: fine-strand with/without wire end ferrule: 1 x 0.5-2.5 mm<sup>2</sup> (2 x 20 - 14 AWG), 2 x 0.5-1.5 mm<sup>2</sup> (2 x 20 - 16 AWG) rigid: 1 x 0.5-4 mm<sup>2</sup> (1 x 20 - 12 AWG), 2 x 0.5-2.5 mm<sup>2</sup> (2 x 20 - 14 AWG)
- One screw for opening and closing of both cages
- Pozidrive screws for pan- or crosshead screwdrivers according to DIN ISO 2380-1 Form A 0.8 x 4 mm (0.0315 x 0.157 in), DIN ISO 8764-1 PZ1 Ø 4.5 mm (0.177 in)

Both the Easy Connect Technology with Push-in terminals and screw connection technology with double-chamber cage connection terminals have the same connection geometry as well as terminal position.

#### **Functions**

#### Operating controls

#### Application

The current monitoring relays CM-SRS.2 are designed for use in single-phase AC and/or DC systems for over- or undercurrent monitoring. The devices are available with different supply voltage ranges, provide an adjustable tripping delay and work according to the open-circuit principle.

#### Operating mode

The CM-SRS.2 with 2 c/o (SPDT) contacts are available in 2 versions with 3 measuring ranges: 3-30 mA, 10-100 mA, 0.1-1 A (CM-SRS.21) and 0.3-1.5 A, 1-5 A, 3-15 A (CM-SRS.22). The measuring range is selected by connecting the monitored wire to the corresponding terminal B1/B2/B3-C.

The units are adjusted with front-face operating controls. The selection of over-  $\boxdot$  or undercurrent monitoring  $\bowtie$  is made with a DIP switch. Potentiometers, with direct reading scale, allow the adjustment of the threshold value I, the hysteresis % and the tripping delay T<sub>v</sub>. The hysteresis % is adjustable within a range of 3 to 30 % of the threshold value and the tripping delay T<sub>v</sub> over a range of instantaneous to a 30 s delay. Timing is displayed by a flashing green LED labelled U/T.

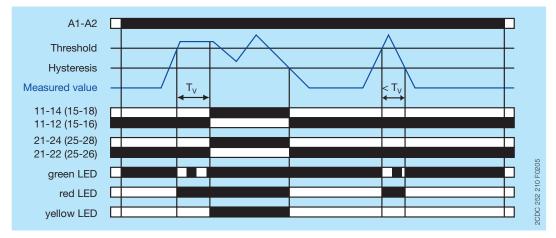

#### **Function diagrams**

## Overcurrent monitoring 🗲

The current to be monitored (measured value) is applied to terminals B1/B2/B3-C. The control supply voltage applied to terminals A1-A2 is displayed by the glowing green LED.

If the measured value exceeds the adjusted threshold value, the tripping delay  $T_v$  starts and the red LED (overcurrent) glows. Timing of  $T_v$  is displayed by the flashing  $\square \square \square$  green LED. When  $T_v$  is complete and the measured value still exceeds the threshold value minus the adjusted hysteresis, the output relays energize and the yellow LED (relay energized) glows.

If the measured value decreases below the threshold value minus the adjusted hysteresis, the output relays de-energize and the red and yellow LEDs turn off.

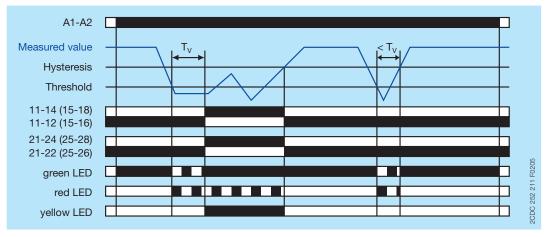

## Undercurrent monitoring 🛌

The current to be monitored (measured value) is applied to terminals B1/B2/B3-C. The control supply voltage applied to terminals A1-A2 is displayed by the glowing green LED.

If the measured value decreases below the adjusted threshold value, the tripping delay  $T_v$  starts and the red LED (undercurrent) flashes  $\square$ . Timing of  $T_v$  is displayed by the flashing  $\square$  green LED. When  $T_v$  is complete and the measured value is still below the threshold value plus the adjusted hysteresis, the output relays energize and the yellow LED (relay energized) glows.

If the measured value exceeds the threshold value plus the adjusted hysteresis, the output relays de-energize and the red and yellow LEDs turn off.
