RFID Non-contact Safety Switches

D40R

RFID Non-contact switches are designed to monitor hinged, sliding or removable guard doors. RFID technology provides increased tamper resistance.

- · Based on RFID technology, providing high anti-tamper resistance
- The RFID-design covers two models with anti-tamper coding:
 - B-types (Basic coded): Any sensor works with any actuator
 - U-types (Unique coded): Each sensor and actuator use a unique code. This is a solution for applications that requires even a higher anti-tamper coding
- Conforms to safety categories up to PLe acc. EN ISO 13849-1
- Connect up to 20 switches in series, up to PLd acc. EN ISO 13849-1
- · LED indicates operation state
- Operates with all two-channel NC Omron safety controllers
- IP69K versions suitable for high pressure cleaning and CIP/SIP
- Stainless steel version specifically designed for Food Processing applications. Can withstand high pressure washdown, high temperatures and detergents.

Ordering Information

Basic coded: Any actuator will operate with any sensor (Teach process needed, if actuator will be changed: Power down - place actuator to sensor - power up).

Unique coded: Only one actuator fits to the code of the sensor (Replacement of only sensor OR actuator is not possible)

Safety Precautions

∕!\ WARNING

Be sure to turn OFF the power before performing wiring. Do not touch charge parts (e.g., terminals) while power is on. Doing so may esult in electric shock.

Do not allow the actuator to come close to the switch with the door open. Doing so may cause machinery to start operating and may result in injury.

Keep actuators (magnets) away from magnetically sensitive equipment like PC harddisks, floppy disks etc. The magnetic field of the magnet will damage existing data.

Application Precautions

- Do not use the product in locations subject to explosive or flammable gases.
- · Do not use load currents exceeding the rated value.
- Be sure to wire each conductor correctly.
- Be sure to confirm correct operation after completing mounting and adjustment.
- Do not drop or attempt to disassemble the product.
- Be sure to use the correct combination of switch and actuator.
- Use a power supply of the specified voltage. Do not use power supplies with large ripples or power supplies that intermittently generate incorrect voltages.
- Capacitors are consumable and require regular maintenance and inspection.

Installation Locations

Do not install the product in the following locations. Doing so may result in product failure or malfunction.

- · Locations subject to direct sunlight
- Locations subject to humidity levels outside the range 35% to 85% or subject to condensation due to extreme temperature changes
- Locations subject to corrosive or flammable gases
- Locations subject to shocks or vibration in excess of the product ratings
- · Locations subject to dust (including iron dust) or salts

Take appropriate and sufficient countermeasures when using the product in the following locations.

- Locations subject to static electricity or other forms of noise
- Locations subject to possible exposure to radioactivity
- · Locations subject to power supply lines
- It is advisable to mount the switches on non ferrous materials. The presence of ferrous material can effect switching sensitivity.

Solvents

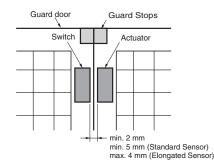

Ensure that solvents, such as alcohol, thinner, trichloroethane, or gasoline do not adhere to the product. Solvents may cause markings to fade and components to deteriorate.

Guard Stops

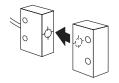

/ CAUTION

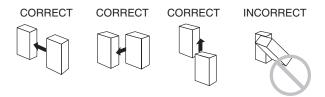

Use guard stops in the way shown below to ensure that the switch and actuator do not make contact when the guard door is closed.

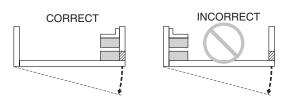

Mounting Direction

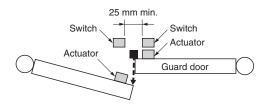

Using for Hinged Doors

On hinged doors, install the Sensor at an opening edge as shown below.

Mutual Interferance

If the switch and actuator are mounted in parallel, be sure to separate them by at least 25 mm, as shown below.
