

Cree® XLamp® MX Family LEDs

INTRODUCTION

This document describes the product nomenclature required to select and order Cree’s XLamp MX Family of LEDs. XLamp MX Family LEDs are tested and sorted into bins which are then combined into orderable kits identified by an order code.

All XLamp LEDs are tested and sorted by color and brightness into a unique bin. Each bin contains LEDs from only one color and brightness group and is uniquely identified by a bin code. White XLamp LEDs are sorted by chromaticity (color), luminous flux (brightness) and sometimes voltage and/or color rendering index (CRI). LEDs are shipped on reels containing LEDs from one bin and are always labeled with the appropriate bin code.

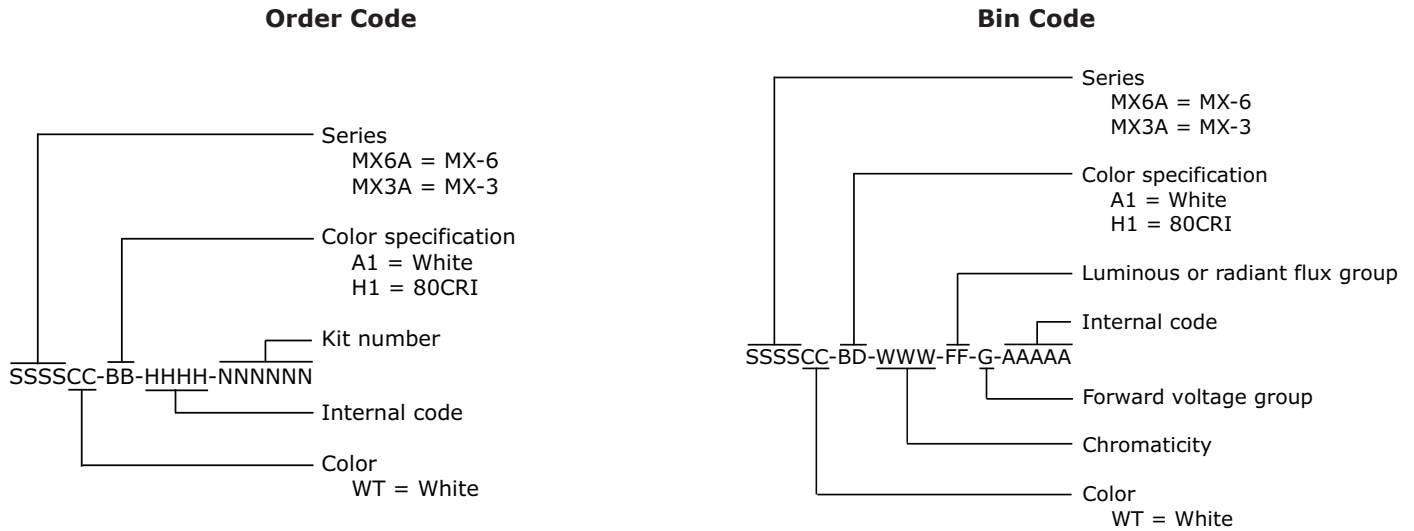

Kits contain LEDs from a number of similar bins and are fully defined by their order codes. A full explanation of the order codes for XLamp MX Family LEDs, as well as a list of standard order codes, is provided in this document.

For other flux and chromaticity combinations, contact Cree or an authorized distributor.

* Cree XLamp MX-6 order codes specify only a minimum flux bin and not a maximum. Cree may ship reels in flux bins higher than the minimum specified by the order code without advance notice. Shipments will always adhere to the chromaticity or DWL bin restrictions specified by the order code.

** Calculated values for reference purposes only.

For other flux and chromaticity combinations, contact Cree or an authorized distributor.

* Cree XLamp MX-6S order codes specify only a minimum flux bin and not a maximum. Cree may ship reels in flux bins higher than the minimum specified by the order code without advance notice. Shipments will always adhere to the chromaticity or DWL bin restrictions specified by the order code.
