

Technical data

Miniature circuit-breakers S 280 UC series

System pro M

ABB

Prior to connection of aluminum conductors ($\geq 4 \text{ mm}^2$) ensure that their contact points are cleaned, brushed and coated with grease.

Conditions for Delivery and Sale

For domestic business, the Standard Terms for Delivery of Products and Services of the Electrical Industry (ABB Form 2292) shall apply in connection with the Standard Sale Terms (ABB Form 2327) in their then applicable version. For foreign business, the Standard Terms for Delivery of Products and Services of the Electrical Industry (ABB Form 2293 German-English, or ABB-Form 2294 German-French) shall apply in connection with the Standard Sale Terms (ABB-Form 2381 English) in their then applicable version.

Warranty

We assume warranty in accordance with the Standard Sale and Delivery Terms. Complaints shall be made in writing within eight days following receipt of the goods.

Technical information and illustrations are not binding and subject to change without notice.

SK 0297 B 91

- Terminal safe from touch by the back of the hand and the finger according to DIN EN 50 274 (VDE 0660 Part 514)

SK 0301 B 91

- Open, captive box terminals supplied ex works latched position, incoming and outgoing circuit.

SK 0302 B 91

- Connection possible for single, multi and finely stranded conductors of 0.75 to 35 mm².
It is also possible to connect conductors with different sizes at the same time.

SK 0303 B 91

- Using combined terminals, simultaneous connection to busbars and cable possible.
Busbar optional, top or bottom, terminal designation according to EN 50005

Miniature circuit-breakers Special features Application notes

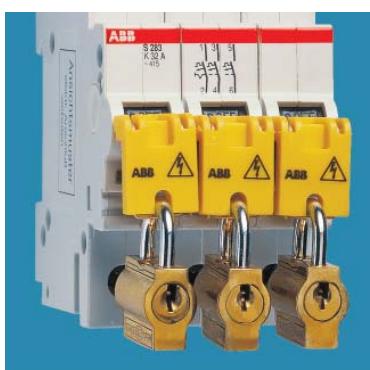

SK 0138 B 93

- High short circuit rupturing capacity
- Auxiliary contacts, signal contacts/auxiliary contacts, signal contacts, shunt trips, and undervoltage releases can be retrofitted at the place of installation
- Energy limitation falls below the values prescribed by the VDE by more than 50 %, the selectivity obtained is thus higher than in energy limitation class 3
- Disconnector abilities according to EN 60 898-1, rated surge withstand capacity U_{imp} 4 kV (1.2/50); test voltage 6.2 kV at NN
- Can be used as main circuit breaker according to DIN VDE 0660 through contact position indicator per pole red = ON, green = OFF

SK 0298 B 91

- An accessory lock prevents unauthorized switching to ON or OFF

SK 0299 B 91

- Integrated device for attaching write-on or other labels or label holders

SK 0300 B 91

① Current intensities 0.5–4 A and 8 A are applicable only to C-type characteristics

Tripping characteristic charts**Reading example for tripping characteristic of type B**(in connection with the Tripping Behavior table on page 95, line **B**)**a Thermal tripping characteristic:**

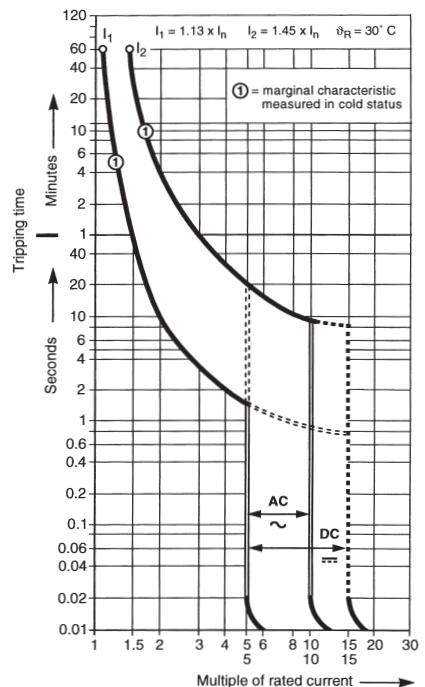

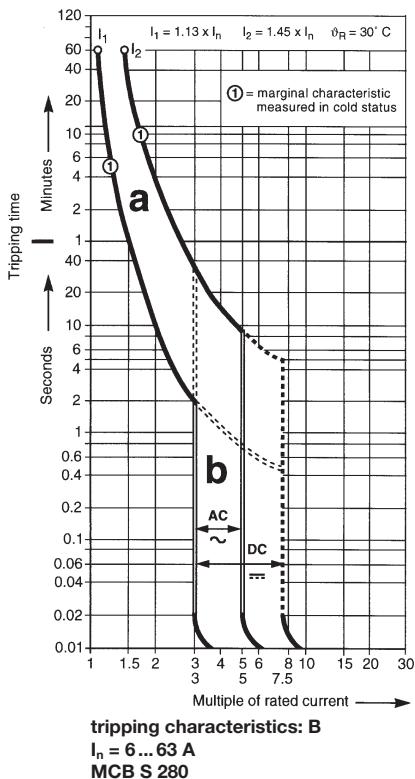

conventional non-tripping current I_1
= selected non-tripping current.
The MCB maintains 1.13 times the rated current for at least 60 minutes.

Conventional tripping current I_2
= selected tripping current
The MCB switches off within 60 minutes when 1.45 times the rated current is reached.

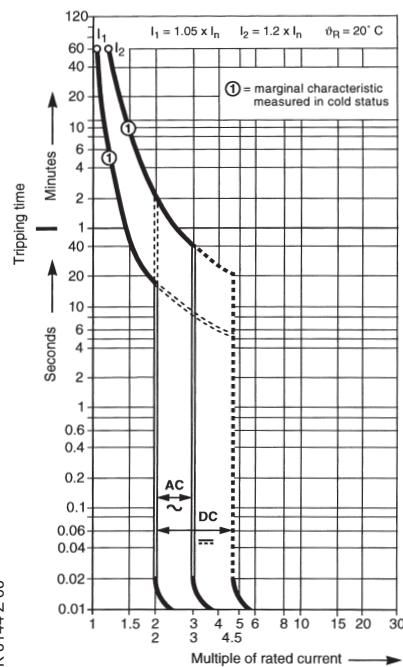

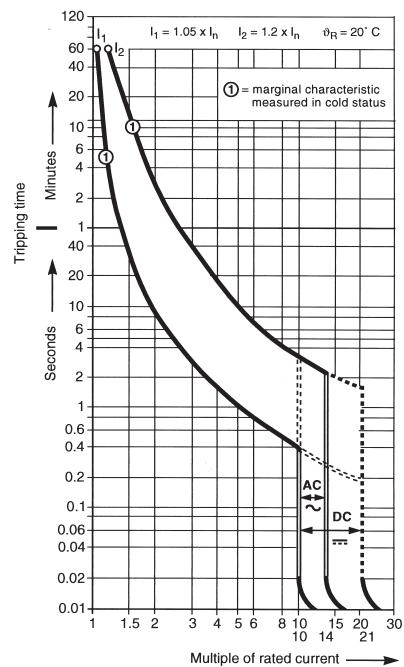

b Electromagnetic tripping characteristic AC:

The MCB maintains current rashes exceeding 3 times the rated current for more than 0.1 sec. (in this example up to ca. 4 sec.).

The MCB switches off within less than 0.1 sec. when 5 times the rated current is reached..

Attention: Deviating ambient temperatures and mutual interference must also be taken into account.

System pro M

Miniature circuit-breakers S 280 UC series

UC = Universal Current = AC/DC

S 280 UC MCBs can be used in the one-pole version as 220 V ..., and in the 2-pole or 4-pole version with series connection of two poles up to 440 V

S 280 UC differs from the standard S 280 type as it is fitted with permanent magnets, which assists in the forced extinguishing of the arc.

If voltages to earth exceeding 220 V DC may occur, 2-pole S 280 UC is to be used for one-pole disconnection, and four-pole 280 UC for all-pole disconnection.

For DC incoming supply from above

S 280 UC... MCBs have, in the area of arc chutes, permanent magnets, it is therefore necessary to take into account the polarity during the installation process.

Doing so ensures that in the case of a short circuit the magnetic field of the permanent magnets corresponds with the electromagnetic field of the short-circuit current, therefore safely leading the short circuit into the arc chute. Incorrect polarities may cause damage to the MCB. **This is why - in the case of top-fed devices - terminal 1 must be connected to (-) and terminal 3 (+).**

Example for permissible voltages between the conductors depending on the number of poles and circuit layout:

voltage U _n between conductors	220 V-	440 V-	440 V-	440 V-	440 V- (voltage reversal)
voltage U _n between conductor and earth	220 V-	220 V-	440 V-	220 V-	220 V-
MCB	1-pole S 281 UC	2-pole S 282 UC	2-pole S 282 UC	2-pole S 282 UC	4-pole S 284 UC
supply from below					
supply from above					

SK 014 Z 94

SK 015 Z 94

Examples for different voltage levels between conductor and earth in the case of identical voltage between conductors:

voltage U _n between conductors	440 V- all-pole disconnection	440 V- 1-pole disconnection	440 V- all-pole disconnection
voltage U _n between conductor and earth	220 V- circuit symmetrically earthed	440 V- circuit unearthed or unsymmetrically earthed	440 V- circuit unearthed or unsymmetrically earthed
MCB	2-pole S 282 UC	2-pole S 282 UC	4-pole S 284 UC

SK 0196 Z 98

① in the circuit diagram, the negative pole is earthed.

② in the circuit diagram, the positive pole is earthed.

Tripping behavior

⑤ Back-up protection is necessary only if the solid short-circuit current to be expected at the place of installation may exceed the short circuit rupturing indicated.

⑥ Z as of 0.5 A

How supplementary devices can be mounted

Additional retrofit devices

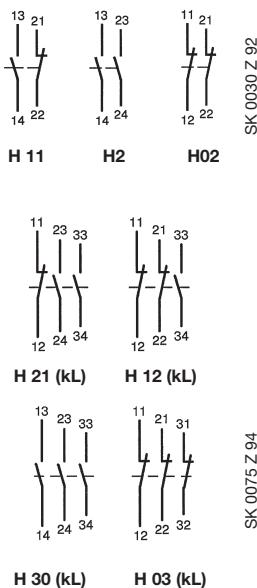

The following accessories can be easily added to MCBs of the S 280 UC series:

Auxiliary contact S2-H.. (X)

The auxiliary switch is fitted with 2 or 3 potential-free contacts and indicates clearly the position of the main contacts, i.e. not only when the device trips due to overload, but also if switched off manually. Coupled to the contact mechanism, it is trip-free.

The auxiliary switch comes either with screw-fixing or as plug-in device (switches with 3 potential-free contacts only screw-type make).

Minimum switching capacity:	5 VA at 12 V
Minimum switching capacity:	0,1 VA at 12 V (H ... kL, low power)
Connection capacity:	2 x 1.5 mm ²
Pick-up torque:	0.8 Nm

Signal contact S2-S

Trips in the case of overload, earth leakage or short circuit, not, however, if switched off manually (has-tripped signal). The signal (red acknowledgment button) can be cancelled without switching the MCB on again. Push the test button to check on the control circuit and not interrupt the main circuit.

Undervoltage release UA (can be retrofitted to the left or the right)

For distance tripping of the MCB (switch OFF). An exciting coil makes it impossible to switch on the device unless a voltage is applied. Where the supply voltage is interrupted or switched off, the undervoltage release makes the MCB trip (suitable for emergency stop circuit).

Shunt trip AL ... (can be retrofitted to the left)

For distance tripping of the MCB (switch OFF). The shunt trip has a relay coil with an integrated contact which disconnects the coil and the coil voltage if the MCB trips, this prevents the continued flow of current in the case of sustained coil voltage.

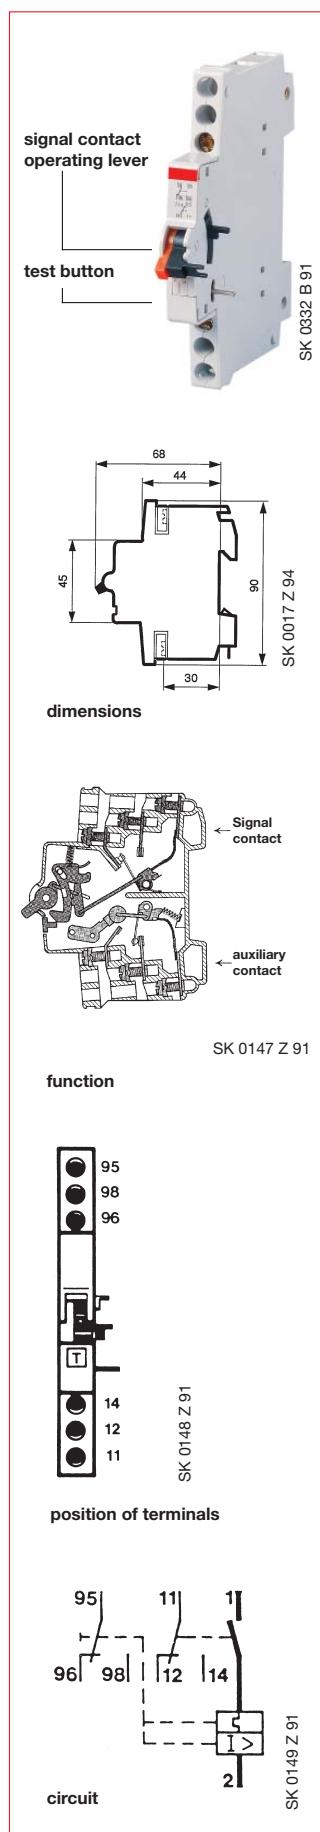

Separate supplementary devices

Neutral disconnector Nt

This component is fitted, if necessary, to the right of the MCB onto the mounting rail. It is used, e.g. to disconnect the neutral prior to measurements. The design of the switching lever ensures that the neutral is lead-making contact when the MCB is switched on.

short-circuit capacity:	10 kA
box terminal:	16 mm ²

Additional retrofit devices

Signal contact/auxiliary contact S2-S/H

The signal contact and the auxiliary contact both have a potential-free changeover contact.

The contacts have a trip-free mechanism.

Minimum switching capacity 0.1 VA at 24 V.

Application examples

- If the MCB is switched off, e.g. due to an insulation test (deliberate interference), only the auxiliary contact trips, but not the signal contact.
- The signal contact switch can be switched to test the control circuit (OFF by test button **T** and ON with the operating lever), without disconnecting the main circuit.
- The signal contact switch can be reset, in order to e.g. acknowledge an acoustic signal switched via the device, without causing the MCB to trip.

The variety of functions makes the combined signal contact/auxiliary contact S2-S/H an excellent choice.

Test the main circuit **without** signalization

Test control circuit **without** service interruption

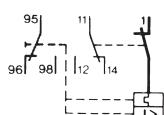

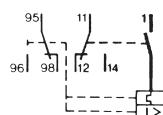

After a short circuit or overload, acknowledge the has-tripped signal.
