## **Precautions**

#### ■ Mounting

To avoid an electric shock or a fire, be sure to turn OFF the D3M before mounting, removing, wiring, or servicing.

Make sure that the surface to which the D3M is mounted is flat. If the surface is not flat, the housing may distort, and the D3M may malfunction, or the housing may crack.

#### Operating Stroke

Make sure that the dog is separated from the actuator when the actuator is in the free position and that the actuator is pressed appropriately when the D3M is actuated. The actuator must not be pressed excessively to reach the maximum overtravel position, or the D3M may be damaged.

Make sure the actuator is pressed in the direction where the D3M is actuated.

#### Minimum Load

If the load causes inrush current, even though the D3M is in operation within the permissible operating range, the life of the D3M may be shortened. In this case, insert a contact protection circuit.

The minimum applicable load is on the basis of level N, that is, a reliable rate of 60% ( $\lambda$ 60), in accordance with JIS C5003.

This rate ( $\lambda$ 60 = 0.5 x 10<sup>-6</sup>/operations) means that the D3M is expected to have operational failure at least once per 2,000,000 operations.

#### ■ Wiring

The terminals connect to JST's Dipole XA Connector.

The Dipole XA Connector consists of the following components. Contact: SAX-001T-P0.6

Housing: XAP-02V-1

OMRON does not sell the Dipole XA Connector. Contact the following.

-<u>/!</u>\Caution

The voltage and current applied to the D3M must be within the rated ranges when it is turned ON, turned OFF, and in operation, or the service life of the D3M may be shortened. Also note that if inappropriate voltage and current are applied, the D3M may radiate heat and burn.
