

# NX-series Temperature Input Unit / Heater Burnout Detection Unit

# NX-TS/HB

CSM\_NX-TS\_HB\_DS\_E\_4\_2

## NX Units to meet every temperature control need

- Temperature Input Unit (NX-TS)  
Standard and high-speed, high-precision temperature measurement and control
- Heater Burnout Detection Unit (NX-HB)  
Temperature control with heater burnout detection in conjunction with a temperature input unit and PID instructions

NX-TS2101

NX-TS3101

## General Specifications

| Item                   |                               | Specification                                                                                                                                                                                               |
|------------------------|-------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Enclosure              |                               | Mounted in a panel                                                                                                                                                                                          |
| Grounding method       |                               | Ground to 100 $\Omega$ or less                                                                                                                                                                              |
| Operating environment  | Ambient operating temperature | 0 to 55°C                                                                                                                                                                                                   |
|                        | Ambient operating humidity    | 10% to 95% (with no condensation or icing)                                                                                                                                                                  |
|                        | Atmosphere                    | Must be free from corrosive gases.                                                                                                                                                                          |
|                        | Ambient storage temperature   | -25 to 70°C (with no condensation or icing)                                                                                                                                                                 |
|                        | Altitude                      | 2,000 m max.                                                                                                                                                                                                |
|                        | Pollution degree              | 2 or less: Meets IEC 61010-2-201.                                                                                                                                                                           |
|                        | Noise immunity                | 2 kV on power supply line (Conforms to IEC61000-4-4.)                                                                                                                                                       |
|                        | Overvoltage category          | Category II: Meets IEC 61010-2-201.                                                                                                                                                                         |
|                        | EMC immunity level            | Zone B                                                                                                                                                                                                      |
|                        | Vibration resistance          | Conforms to IEC 60068-2-6.<br>5 to 8.4 Hz with 3.5-mm amplitude, 8.4 to 150 Hz, acceleration of 9.8 m/s <sup>2</sup> , 100 min each in X, Y, and Z directions<br>(10 sweeps of 10 min each = 100 min total) |
|                        | Shock resistance              | Conforms to IEC 60068-2-27. 147 m/s <sup>2</sup> , 3 times each in X, Y, and Z directions                                                                                                                   |
| Applicable standards * |                               | cULus: Listed (UL508), ANSI/ISA 12.12.01, EU: EN 61131-2, C-Tick or RCM, KC Registration, NK, LR                                                                                                            |

## System Configurations

### Connected to a CPU Unit

The following figure shows a system configuration when NX Units are connected to an NX-series CPU Unit.

**Note:** For whether an NX Unit can be connected to the CPU Unit, refer to the version information.

### Connected to an EtherCAT Coupler Unit

The following figure shows an example of the system configuration when an EtherCAT Coupler Unit is used as a Communications Coupler Unit.

\*1. The connection method for the Sysmac Studio depends on the model of the CPU Unit or Industrial PC.

\*2. An EtherCAT Slave Terminal cannot be connected to any of the OMRON CJ1W-NC□81/□82 Position Control Units even though they can operate as EtherCAT masters.

**Note:** For whether an NX Unit can be connected to the Communications Coupler Unit, refer to the version information.

## System Configuration in the Case of a Communication Control Unit

The following figure shows a system configuration when a group of NX Units is connected to an NX-series Communication Control Unit. To configure a Safety Network Controller, mount the Safety CPU Unit, which is one of the NX Units, to the CPU Rack of the Communication Control Unit.

You cannot connect a Communication Control Unit with Heater Burnout Detection Unit.

**Note:** For whether an NX Unit can be connected to the Communication Control Unit, refer to the version information.

## Model Number Structure

**NX-**            

(1)    (2) (3)    (4)

### (1) Unit type

| No. | Specification            |
|-----|--------------------------|
| TS  | Temperature input        |
| HB  | Heater burnout detection |

### (2) Number of points

| No. | Specification |
|-----|---------------|
| 2   | 2 points      |
| 3   | 4 points      |
| 4   | 8 points      |

### (3) I/O type

#### • Temperature Input Units

| No. | Sensor type            |
|-----|------------------------|
| 1   | Thermocouple           |
| 2   | Resistance thermometer |

#### • Heater Burnout Detection Units

| No. | Internal I/O common processing of control outputs |
|-----|---------------------------------------------------|
| 1   | NPN                                               |
| 2   | PNP                                               |

### (4) Other specifications

#### • Temperature Input Units

| No. | Conversion time | Resolution    | I/O refreshing method       |                                                                 |
|-----|-----------------|---------------|-----------------------------|-----------------------------------------------------------------|
|     |                 |               | Free-Run refreshing only *1 | Switching Synchronous I/O refreshing *2 and Free-Run refreshing |
| 01  | 250 ms/Unit     | 0.1°C max. *3 | Yes                         | ---                                                             |
| 02  | 10 ms/Unit      | 0.01°C max.   | Yes                         | ---                                                             |
| 04  | 60 ms/Unit      | 0.001°C max.  | Yes                         | ---                                                             |

\*1. Free-Run refreshing

\*2. Synchronous I/O refreshing

\*3. The resolution is 0.2°C max. when the input type is R, S, or W.

\*1. The resolution is 0.2°C max. when the input type is R, S, or W.

\*2. The NX-TS2202 and NX-TS3202 only support Pt100 three-wire sensor.

\* Can be connected to the NX-HB Heater Burnout Detection Unit.

### Accessories

Not included.

## Version Information

### Connected to a CPU Unit

Refer to the user's manual for the CPU Unit details on the CPU Units to which NX Units can be connected.

### Temperature Input Units

### Heater Burnout Detection Units

| NX Unit   |              | Corresponding unit versions/versions |               |
|-----------|--------------|--------------------------------------|---------------|
| Model     | Unit version | CPU Unit                             | Sysmac Studio |
| NX-HB3101 | Ver.1.0      | Ver.1.13                             | Ver.1.17      |
| NX-HB3201 |              |                                      |               |

**Note:** Some Units do not have all of the versions given in the above table. If a Unit does not have the specified version, support is provided by the oldest available version after the specified version. Refer to the user's manuals for the specific Units for the relation between models and versions.

## Connected to an EtherCAT Coupler Unit

|-----------|--------------|---------------------------------------------------|---------------------------|---------------|-------------------------------------------|---------------|-----------------------|
| Model     | Unit version | Application with an NJ/NX/NY-series Controller *1 |                           |               | Application with a CS/CJ/CP-series PLC *2 |               |                       |
|           |              | EtherNet/IP Coupler Unit                          | CPU Unit or Industrial PC | Sysmac Studio | EtherNet/IP Coupler Unit                  | Sysmac Studio | NX-IO Configurator *3 |
| NX-HB3101 | Ver.1.0      | Ver.1.2                                           | Ver.1.14                  | Ver.1.19      | Ver.1.0                                   | Ver.1.16      | Ver.1.00              |
| NX-HB3201 |              |                                                   |                           |               |                                           |               |                       |

**Note:** Some Units do not have all of the versions given in the above table. If a Unit does not have the specified version, support is provided by the oldest available version after the specified version. Refer to the user's manuals for the specific Units for the relation between models and versions.

- \*1. Refer to the user's manual of the EtherNet/IP Coupler Unit for the unit versions of EtherNet/IP Units corresponding to EtherNet/IP Coupler Units.
- \*2. Refer to the user's manual of the EtherNet/IP Coupler Unit for the unit versions of CPU Units and EtherNet/IP Units corresponding to EtherNet/IP Coupler Units.
- \*3. For connection to an EtherNet/IP Coupler Unit with unit version 1.0, connection is supported only for a connection to the peripheral USB port on the EtherNet/IP Coupler Unit. You cannot connect by any other path. If you need to connect by another path, use an EtherNet/IP Coupler Unit with unit version 1.2 or later.

## Connected to an Communication Control Unit

| (A)    | NX bus connector     | This connector is used to connect to another Unit.                                                                                                  |
| (B)    | Indicators           | The indicators show the current operating status of the Unit.                                                                                       |
| (C)    | Terminal block       | The terminal block is used to connect to external devices.<br>The number of terminals depends on the Unit.                                          |
| (D)    | Cold junction sensor | This sensor is used to compensate the cold junction.<br>The sensors are mounted on both left and right terminal blocks for models with 24 mm width. |

## Terminal Blocks

| Letter | Item                        | Specification                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
|--------|-----------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| (A)    | Terminal number indications | The terminal number is identified by a column (A through D) and a row (1 through 8). Therefore, terminal numbers are written as a combination of columns and rows, A1 through A8 and B1 through B8.<br>For a 24-mm-wide terminal block (16 terminals x 2), the left side contains terminals A1 through A8 and B1 through B8. The right side contains terminals C1 through C8 and D1 through D8.<br>The terminal number indication is the same regardless of the number of terminals on the terminal block. |
| (B)    | Release holes               | A flat-blade screwdriver is inserted here to attach and remove the wiring.                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| (C)    | Terminal holes              | The wires are inserted into these holes.                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |

### Applicable Terminal Blocks for Each Unit Model

| Unit model | Terminal Blocks |                  |                             |                      |                           |
|------------|-----------------|------------------|-----------------------------|----------------------|---------------------------|
|            | Model           | No. of terminals | Terminal number indications | Ground terminal mark | Terminal current capacity |

## Applicable Wires

### Using Ferrules

If you use ferrules, attach the twisted wires to them.

Observe the application instructions for your ferrules for the wire stripping length when attaching ferrules.

Always use plated one-pin ferrules. Do not use unplated ferrules or two-pin ferrules.

The applicable ferrules, wires, and crimping tool are given in the following table.

| Terminal type                         | Manufacturer    | Ferrule model | Applicable wire (mm <sup>2</sup> (AWG)) | Crimping tool                                                                                                                    |
|---------------------------------------|-----------------|---------------|-----------------------------------------|----------------------------------------------------------------------------------------------------------------------------------|

|                                       |                 | H1.5/16       |                                         |                                                                                                                                  |

\* Some AWG 14 wires exceed 2.0 mm<sup>2</sup> and cannot be used in the screwless clamping terminal block.

When you use any ferrules other than those in the above table, crimp them to the twisted wires so that the following processed dimensions are achieved.

Finished Dimensions of Ferrules

### Using Twisted Wires/Solid Wires

If you use the twisted wires or the solid wires, use the following table to determine the correct wire specifications.

| Terminals                                |                                     | Wire type      |                 |                 |                 | Wire size                                  | Conductor length<br>(stripping length) |
|------------------------------------------|-------------------------------------|----------------|-----------------|-----------------|-----------------|--------------------------------------------|----------------------------------------|
|                                          |                                     | Twisted wires  |                 | Solid wire      |                 |                                            |                                        |

\*1. Secure wires to the screwless clamping terminal block. Refer to the Securing Wires in the USER'S MANUAL for how to secure wires.

\*2. With the NX-TB□□□1 Terminal Block, use twisted wires to connect the ground terminal. Do not use a solid wire.

Conductor length (stripping length)

<Additional Information> If more than 2 A will flow on the wires, use plated wires or use ferrules.

## Dimensions

### Screwless Clamping Terminal Block Type

12 mm Width

24 mm Width

\* The dimension is 1.35 mm for Units with lot numbers through December 2014.

# NX-series Temperature Input Unit

## NX-TS

### Standard and high-speed, high-precision temperature measurement and control

- Temperature Input Units for the NX-series modular I/O system
- Connect to other NX I/O Units and EtherCAT Coupler Units using the high-speed NX-bus
- Thermocouple and platinum resistance thermometer input models are available

### Features

- Up to four temperature sensor inputs per unit
- Three sampling speeds, 250 ms, 60 ms, and 10 ms, are available to cover a wide range from general-purpose application to high-speed, high-precision control
- Moving average, input sensor disconnection detection, cold junction compensation enable/disable setting, and input correction
- Detachable front connector with screwless Push-In Plus terminals for easy installation and maintenance
- Connect to the CJ PLC using the EtherNet/IP™ bus coupler

## Temperature Input Unit Specifications

### Temperature Input Unit (Thermocouple Input type) 2 points NX-TS2101

\*1. The resolution is 0.2°C max. when the input type is R, S, or W.

\*2. Refer to *Reference Accuracy and Temperature Coefficient According to the Input Type and Measurement Temperature*.

\*3. The overall accuracy is guaranteed for a set consisting of a cold junction sensor that is mounted on the terminal block and a Temperature Input Unit. Be sure to use the terminal block and the Temperature Input Unit together. A calibration control number is both displayed on the terminal block and the Unit. Make sure to return the terminal block (including a cold junction sensor mounted) and the Unit together for repair.

\*4. Refer to *Cold Junction Compensation Error Specifications for Units That Take a Thermocouple Input Type* for the specifications for each set of operating conditions.

\*1. Refer to *Reference Accuracy and Temperature Coefficient According to the Input Type and Measurement Temperature*.

\*2. The overall accuracy is guaranteed for a set consisting of a cold junction sensor that is mounted on the terminal block and a Temperature Input Unit. Be sure to use the terminal block and the Temperature Input Unit together. A calibration control number is both displayed on the terminal block and the Unit. Make sure to return the terminal block (including a cold junction sensor mounted) and the Unit together for repair.

\*3. Refer to *Cold Junction Compensation Error Specifications for Units That Take a Thermocouple Input Type* for the specifications for each set of operating conditions.

## Temperature Input Unit (Thermocouple Input type) 2 points NX-TS2104

\*1. Refer to *Reference Accuracy and Temperature Coefficient According to the Input Type and Measurement Temperature*.

\*2. The overall accuracy is guaranteed for a set consisting of a cold junction sensor that is mounted on the terminal block and a Temperature Input Unit. Be sure to use the terminal block and the Temperature Input Unit together. A calibration control number is both displayed on the terminal block and the Unit. Make sure to return the terminal block (including a cold junction sensor mounted) and the Unit together for repair.

\*3. Refer to *Cold Junction Compensation Error Specifications for Units That Take a Thermocouple Input Type* for the specifications for each set of operating conditions.

\*1. The resolution is 0.2°C max. when the input type is R, S, or W.

\*2. Refer to *Reference Accuracy and Temperature Coefficient According to the Input Type and Measurement Temperature*.

\*3. The overall accuracy is guaranteed for a set consisting of a cold junction sensor that is mounted on the terminal block and a Temperature Input Unit. Be sure to use the terminal block and the Temperature Input Unit together. A calibration control number is both displayed on the terminal block and the Unit. Make sure to return the terminal block (including a cold junction sensor mounted) and the Unit together for repair.

\*4. Refer to *Cold Junction Compensation Error Specifications for Units That Take a Thermocouple Input Type* for the specifications for each set of operating conditions.

## Temperature Input Unit (Thermocouple Input type) 4 points NX-TS3102

\*1. Refer to *Reference Accuracy and Temperature Coefficient According to the Input Type and Measurement Temperature*.

\*2. The overall accuracy is guaranteed for a set consisting of a cold junction sensor that is mounted on the terminal block and a Temperature Input Unit. Be sure to use the terminal block and the Temperature Input Unit together. A calibration control number is both displayed on the terminal block and the Unit. Make sure to return the terminal block (including a cold junction sensor mounted) and the Unit together for repair.

\*3. Refer to *Cold Junction Compensation Error Specifications for Units That Take a Thermocouple Input Type* for the specifications for each set of operating conditions.

## Temperature Input Unit (Thermocouple Input type) 4 points NX-TS3104

\*1. Refer to *Reference Accuracy and Temperature Coefficient According to the Input Type and Measurement Temperature*.

\*2. The overall accuracy is guaranteed for a set consisting of a cold junction sensor that is mounted on the terminal block and a Temperature Input Unit. Be sure to use the terminal block and the Temperature Input Unit together. A calibration control number is both displayed on the terminal block and the Unit. Make sure to return the terminal block (including a cold junction sensor mounted) and the Unit together for repair.

\*3. Refer to *Cold Junction Compensation Error Specifications for Units That Take a Thermocouple Input Type* for the specifications for each set of operating conditions.

## Temperature Input Unit (Resistance Thermometer Input type) 4 points NX-TS3201

- \*1. To convert the temperature unit from Celsius to Fahrenheit, use the following equation.  

$$\text{Fahrenheit temperature (°F)} = \text{Celsius temperature (°C)} \times 1.8 + 32$$
- \*2. If there is more than one input range for the same input type, the one with narrower input range has higher resolution.
- \*3. For a thermocouple input type Temperature Input Unit, the overall accuracy is guaranteed for a set consisting of a cold junction sensor that is mounted on the terminal block and a Temperature Input Unit. Be sure to use the terminal block and Temperature Input Unit with the same calibration control number together. For the 24 mm wide model, also be sure the left and right terminal blocks are correctly attached.

- \*4. An error for a measured value when the ambient temperature changes by 1°C.  
 The following formula is used to calculate the error of the measured value.  

$$\text{Overall accuracy} = \text{Reference accuracy} + \text{Temperature characteristic} \times \text{Change in the ambient temperature} + \text{Cold junction compensation error}$$
 (Calculation example)  
 Conditions

| Item                | Description    |
|---------------------|----------------|
| Ambient temperature | 30°C           |
| Measured value      | 100°C          |
| NX Unit             | NX-TS2101      |
| Thermocouple        | K thermocouple |

The characteristic values are formulated from the data sheet or reference accuracy and temperature coefficient table under the above conditions

| Item                              | Description               |
|-----------------------------------|---------------------------|
| Reference accuracy                | -100 to 400°C: ±1.5°C     |
| Temperature coefficient           | -100 to 400°C: ±0.30°C/°C |
| Change in the ambient temperature | 25°C → 30°C 5 deg         |
| Cold junction compensation error  | ±1.2°C                    |

Therefore,  

$$\begin{aligned} \text{Overall accuracy} &= \text{Reference accuracy} + \text{Temperature characteristic} \times \text{Change in the ambient temperature} + \text{Cold junction compensation error} \\ &= \pm 1.5^\circ\text{C} + (\pm 0.30^\circ\text{C}/^\circ\text{C}) \times 5 \text{ deg} + \pm 1.2^\circ\text{C} \\ &= \pm 4.2^\circ\text{C} \end{aligned}$$

- \*5. The ppm value is for the full scale of temperature range.

### • Cold Junction Compensation Error Specifications for Units That Take a Thermocouple Input Type

The cold junction compensation error for Units that take a thermocouple input type is restricted as follows according to the installation orientation and the power consumption of adjacent Units\*.

- (a) For upright installation, when the power consumption is 1.5 W or less for both the left and right adjacent Units

The cold junction compensation error is  $\pm 1.2^{\circ}\text{C}$ .

However, there are exceptions depending on the input type and temperature. Those conditions and the cold junction compensation error are as in the table below.

| Input type and temperature range           | Cold junction compensation error |
|--------------------------------------------|----------------------------------|
| T below $-90^{\circ}\text{C}$              | $\pm 3.0^{\circ}\text{C}$        |
| J, E, K and N below $-100^{\circ}\text{C}$ |                                  |
| U, L and PLII                              |                                  |
| R and S below $200^{\circ}\text{C}$        |                                  |
| B below $400^{\circ}\text{C}$              | Not guaranteed                   |
| W                                          | $\pm 3.0^{\circ}\text{C}$        |

- (b) When the power consumption of either the left or the right adjacent Unit is more than 1.5 W but less than 3.9 W. Or for any installation other than upright, when the power consumption of both the left and right adjacent Units is less than 3.9 W

The cold junction compensation error is  $\pm 4.0^{\circ}\text{C}$ .

However, there are exceptions depending on the input type and temperature. Those conditions and the cold junction compensation error are as in the table below.

| Input type and temperature range           | Cold junction compensation error |
|--------------------------------------------|----------------------------------|
| T below $-90^{\circ}\text{C}$              | $\pm 7.0^{\circ}\text{C}$        |
| J, E, K and N below $-100^{\circ}\text{C}$ |                                  |
| U, L and PLII                              |                                  |
| R and S below $200^{\circ}\text{C}$        |                                  |
| B below $400^{\circ}\text{C}$              | Not guaranteed                   |
| W                                          | $\pm 9.0^{\circ}\text{C}$        |

- (c) When the power consumption exceeds 3.9 W for either the left or right adjacent Unit

Do not use the above condition (c) because the cold junction compensation error is not guaranteed in this condition.

\* The power consumption of adjacent Units is the total of the following values.

The power consumption of the NX Unit power supply and I/O power supply for the NX Units adjacent to the Temperature Input Unit. If the adjacent Unit is an Input Unit, it is the total power consumption according to the input current.
