

# 2-1 Servo System Configuration

# 2-2 How to Read Model Numbers

## Servo Drive

The Servo Drive model number tells the Servo Drive type, applicable Servomotor capacity, power supply voltage, etc.

R88D-KT01H

OMNUC G5-series Servo Drive

Drive Type

T : Pulse/analog type

Maximum Applicable Servomotor Capacity

- A5 : 50 W
- 01 : 100 W
- 02 : 200 W
- 04 : 400 W
- 06 : 600 W
- 08 : 750 W
- 10 : 1 kW
- 15 : 1.5 kW
- 20 : 2 kW
- 30 : 3 kW
- 50 : 5 kW
- 75 : 7.5 kW
- 150 : 15 kW

Power Supply Voltage

- L : 100 VAC
- H : 200 VAC
- F : 400 VAC

Servomotor

R88M-K10030H-BOS2

# 2-3 Standard Model Tables

Servo Drive Model Table

| Specifications               |        | Model       |
|------------------------------|--------|-------------|
| Single-phase 100 VAC         | 50 W   | R88D-KTA5L  |
|                              | 100 W  | R88D-KT01L  |
|                              | 200 W  | R88D-KT02L  |
|                              | 400 W  | R88D-KT04L  |
| Single-phase/3-phase 200 VAC | 100 W  | R88D-KT01H  |
|                              | 200 W  | R88D-KT02H  |
|                              | 400 W  | R88D-KT04H  |
|                              | 750 W  | R88D-KT08H  |
|                              | 1 kW   | R88D-KT10H  |
|                              | 1.5 kW | R88D-KT15H  |
| 3-phase 200 VAC              | 2 kW   | R88D-KT20H  |
|                              | 3 kW   | R88D-KT30H  |
|                              | 5 kW   | R88D-KT50H  |
|                              | 7.5 kW | R88D-KT75H  |
|                              | 15 kW  | R88D-KT150H |
| 3-phase 400 VAC              | 600 W  | R88D-KT06F  |
|                              | 1 kW   | R88D-KT10F  |
|                              | 1.5 kW | R88D-KT15F  |
|                              | 2 kW   | R88D-KT20F  |
|                              | 3 kW   | R88D-KT30F  |
|                              | 5 kW   | R88D-KT50F  |
|                              | 7.5 kW | R88D-KT75F  |
|                              | 15 kW  | R88D-KT150F |

## Servomotor Model Tables

### 3,000-r/min Servomotors

| Specifications |       |        | Model                         |                                    |                               |                                    |
|----------------|-------|--------|-------------------------------|------------------------------------|-------------------------------|------------------------------------|
|                |       |        | With incremental encoder      |                                    | With absolute encoder         |                                    |

|                |       | 7.5 kW | ---                        | ---                             | R88M-K7K515C               | R88M-K7K515C-S2                 |
|                |       | 11 kW  | ---                        | ---                             | R88M-K11K015C              | R88M-K11K015C-S2                |
|                |       | 15 kW  | ---                        | ---                             | R88M-K15K015C              | R88M-K15K015C-S2                |

Note 1. Models with oil seals are also available.

Note 2. The rated rotation speed of Servomotors of 7.5 to 15 kW is 1,500 r/min.

## 2-3 Standard Model Tables

| Specifications |       |        | Model                         |                                    |                               |                                    |
|----------------|-------|--------|-------------------------------|------------------------------------|-------------------------------|------------------------------------|

Note 1. Models with oil seals are also available.

Note 2. The rated rotation speed of Servomotors of 7.5 to 15 kW is 1,500 r/min.

## 1,000-r/min Servomotors

| Specifications |       |        | Model                         |                                    |                               |                                    |

Note. Models with oil seals are also available.

## Servo Drive and Servomotor Combination Tables

The tables in this section show the possible combinations of OMNUC G5-series Servo Drives and Servomotors. The Servomotors and Servo Drives can only be used in the listed combinations.

“-□” at the end of the motor model number is for options, such as the shaft type, brake, oil seal and key.

### 3,000-r/min Servomotors and Servo Drives

| Voltage                        | Servomotor   |                          |                       | Servo Drive |
|--------------------------------|--------------|--------------------------|-----------------------|-------------|
|                                | Rated output | With incremental encoder | With absolute encoder |             |

## 3-3 Servomotor Specifications

The following OMNUC G5-Series AC Servomotors are available.

- ♦ 3,000-r/min Servomotors
- ♦ 2,000-r/min Servomotors
- ♦ 1,500-r/min Servomotors
- ♦ 1,000-r/min Servomotors

There are various options available, such as models with brakes, or different shaft types.

Select a Servomotor based on the mechanical system's load conditions and the installation environment.

\*1. The amplitude may be amplified by machine resonance. Do not exceed 80% of the specified value for extended periods of time.

\*2. 24.5m/s<sup>2</sup> is specified for 1,500-r/min Servomotors of 7.5 to 15 kW and 1,000-r/min Servomotors of 4.5 to 6 kW.

\*3. UL 1004-6 applies only to 1,500-r/min Servomotors of 7.5 to 15 kW and 1,000-r/min Servomotors of 4.5 to 6 kW.

Note 1. Do not use the cable when it is laying in oil or water.

Note 2. Do not expose the cable outlet or connections to stress due to bending or the weight of the cable itself.

Note 3. Disconnect all connections to the Servomotor before attempting a megameter test (insulation resistance measurement) on a Servomotor. Failure to follow this guideline may result in damaging the Servomotor. Never perform a dielectric strength test on the Servomotor. Failure to follow this guideline may result in damaging the internal elements.

## Characteristics

### 3,000-r/min Servomotors

Brake specifications

3

Specifications

- \*1. These are the values when the Servomotor is combined with a drive at normal temperature (20°C, 65%). The momentary maximum torque indicates the standard value.
- \*2. Applicable load inertia.
  - ♦ The operable load inertia ratio (load inertia/rotor inertia) depends on the mechanical configuration and its rigidity. For a machine with high rigidity, operation is possible even with high load inertia. Select an appropriate motor and confirm that operation is possible.
  - ♦ The dynamic brake is rated for short-term operation. Use it only for emergency stopping. Design the system to stop for at least ten minutes after the dynamic brake operates. Otherwise, the dynamic brake circuits may fail or the dynamic brake resistor may burn.
- \*3. The allowable radial and thrust loads are the values determined for a limit of 20,000 hours at normal operating temperatures.  
The allowable radial loads are applied as shown in the following diagram.

- \*4. This is a non-excitation brake. (It is released when excitation voltage is applied.)
- \*5. The operation time is the value (reference value) measured with a surge suppressor (CR50500 by Okaya Electric Industries Co., Ltd.).
- \*6. Direct current switching with a varistor (Z15D151 by Ishizuka Electronics Co.).
- \*7. Direct current switching with a varistor (TNR9G820K by Nippon Chemi-Con Corporation).

#### Torque-Rotation Speed Characteristics for 3,000-r/min Servomotors

- ♦ 3,000-r/min Servomotor (100 VAC)

The following graphs show the characteristics with a 3-m standard cable and a 100-VAC input.

##### • R88M-K05030H/T (50 W)

##### • R88M-K10030L/S (100 W)

##### • R88M-K20030L/S (200 W)

##### • R88M-K40030L/S (400 W)

Note 1: The continuous operation range is the range in which continuous operation is possible. Continuous operation at the maximum speed is also possible. However, doing so will reduce the output torque.

Note 2: If the motor power cable exceeds 20 m, the voltage drop will increase and the momentary operation range will become narrower.

### 3-3 Servomotor Specifications

#### ♦ 3,000-r/min Servomotor (200 VAC)

The following graphs show the characteristics with a 3-m standard cable and a 200-VAC input.

##### • R88M-K05030H/T (50 W)

##### • R88M-K10030H/T (100 W)

##### • R88M-K20030H/T (200 W)

##### • R88M-K40030H/T (400 W)

##### • R88M-K75030H/T (750 W)

##### • R88M-K1K030H/T (1 kW)

##### • R88M-K1K530H/T (1.5 kW)

##### • R88M-K2K030H/T (2 kW)

##### • R88M-K3K030H/T (3 kW)

##### • R88M-K4K030H/T (4 kW)

##### • R88M-K5K030H/T (5 kW)

Note 1: The continuous operation range is the range in which continuous operation is possible. Continuous operation at the maximum speed is also possible. However, doing so will reduce the output torque.

Note 2: If the motor power cable exceeds 20 m, the voltage drop will increase and the momentary operation range will become narrower.

♦ 3,000-r/min Servomotor (400 VAC)

The following graphs show the characteristics with a 3-m standard cable and a 400-VAC input.

• R88M-K75030F/C (750 W)

• R88M-K1K030F/C (1 kW)

• R88M-K1K530F/C (1.5 kW)

• R88M-K2K030F/C (2 kW)

• R88M-K3K030F/C (3 kW)

• R88M-K4K030F/C (4 kW)

• R88M-K5K030F/C (5 kW)

Note 1: The continuous operation range is the range in which continuous operation is possible. Continuous operation at the maximum speed is also possible. However, doing so will reduce the output torque.

Note 2: If the motor power cable exceeds 20 m, the voltage drop will increase and the momentary operation range will become narrower.

### 3-3 Servomotor Specifications

Use the following Servomotors in the ranges shown in the graphs below. Using outside of these ranges may cause the motor to generate heat, which could result in encoder malfunction.

- R88M-K05030L/S/H/T  
(50 W: With oil seal)

- R88M-K10030L/S/H/T  
(100 W: With oil seal)

- R88M-K20030L/SH/T  
(200 W: With oil seal)

- R88M-K40030L/S/H/T  
(400 W: Without oil seal)

- R88M-K40030L/S/H/T  
(400 W: With oil seal)

- R88M-K1K530H/T/F/C  
(1.5 kW)

- R88M-K2K030H/T/F/C  
(2 kW)

- R88M-K3K030H/T/F/C  
(3 kW)

- R88M-K4K030H/T/F/C  
(4 kW)

- R88M-K5K030H/T/F/C  
(5 kW)

## 1,500-r/min and 2,000-r/min Servomotors

| Model (R88M-)                        |                               |                     | 200 VAC                            |                       |                       |

Brake specifications

- \*1. These are the values when the Servomotor is combined with a drive at normal temperature (20°C, 65%). The momentary maximum torque indicates the standard value.
- \*2. Applicable load inertia.
- ♦ The operable load inertia ratio (load inertia/rotor inertia) depends on the mechanical configuration and its rigidity. For a machine with high rigidity, operation is possible even with high load inertia. Select an appropriate motor and confirm that operation is possible.
  - ♦ The dynamic brake is rated for short-term operation. Use it only for emergency stopping. Design the system to stop for at least ten minutes after the dynamic brake operates. Otherwise, the dynamic brake circuits may fail or the dynamic brake resistor may burn.
- \*3. The allowable radial and thrust loads are the values determined for a limit of 20,000 hours at normal operating temperatures.
- The allowable radial loads are applied as shown in the following diagram.

- \*4. This is a non-excitation brake. (It is released when excitation voltage is applied.)
- \*5. The operation time is the value (reference value) measured with a surge suppressor (CR50500 by Okaya Electric Industries Co., Ltd.).
- \*6. Direct current switching with a varistor (TNR9G820K by Nippon Chemi-Con Corporation).
- \*7. Direct current switching with a varistor (Z15D151 by Ishizuka Electronics Co.).

#### Torque-Rotation Speed Characteristics for 1,500-r/min and 2,000-r/min Servomotors

♦ 1,500-r/min and 2,000-r/min Servomotor (200 VAC)

The following graphs show the characteristics with a 3-m standard cable and a 200-VAC input.

• R88M-K1K020H/T (1 kW)

• R88M-K1K520H/T (1.5 kW)

• R88M-K2K020H/T (2 kW)

• R88M-K3K020H/T (3 kW)

• R88M-K4K020H/T (4 kW)

• R88M-K5K020H/T (5 kW)

• R88M-K7K515T (7.5 kW)

• R88M-K11K015T (11 kW)

• R88M-K15K015T (15 kW)

Note 1: The continuous operation range is the range in which continuous operation is possible. Continuous operation at the maximum speed is also possible. However, doing so will reduce the output torque.

Note 2: If the motor power cable exceeds 20 m, the voltage drop will increase and the momentary operation range will become narrower.

### 3-3 Servomotor Specifications

#### ♦ 1,500-r/min and 2,000-r/min Servomotor (400 VAC)

The following graphs show the characteristics with a 3-m standard cable and a 400-VAC input.

##### • R88M-K40020F/C (400 W)

##### • R88M-K60020F/C (600 W)

##### • R88M-K1K020F/C (1 kW)

##### • R88M-K1K520F/C (1.5 kW)

##### • R88M-K2K020F/C (2 kW)

##### • R88M-K3K020F/C (3 kW)

##### • R88M-K4K020F/C (4 kW)

##### • R88M-K5K020F/C (5 kW)

##### • R88M-K7K515C (7.5 kW)

##### • R88M-K11K015C (11 kW)

##### • R88M-K15K015C (15 kW)

Note 1: The continuous operation range is the range in which continuous operation is possible. Continuous operation at the maximum speed is also possible. However, doing so will reduce the output torque.

Note 2: If the motor power cable exceeds 20 m, the voltage drop will increase and the momentary operation range will become narrower.

Use the following Servomotors in the ranges shown in the graphs below. Using outside of these ranges may cause the motor to generate heat, which could result in encoder malfunction.

##### • R88M-K5K020H/T/F/C (5 kW)

##### • R88M-K7K515T/C (7.5 kW)

##### • R88M-K15K015T/C (15 kW)

Brake specifications

- \*1. These are the values when the Servomotor is combined with a drive at normal temperature (20°C, 65%). The momentary maximum torque indicates the standard value.
- \*2. Applicable load inertia.
  - ♦ The operable load inertia ratio (load inertia/rotor inertia) depends on the mechanical configuration and its rigidity. For a machine with high rigidity, operation is possible even with high load inertia. Select an appropriate motor and confirm that operation is possible.
  - ♦ The dynamic brake is rated for short-term operation. Use it only for emergency stopping. Design the system to stop for at least ten minutes after the dynamic brake operates. Otherwise, the dynamic brake circuits may fail or the dynamic brake resistor may burn.
- \*3. The allowable radial and thrust loads are the values determined for a limit of 20,000 hours at normal operating temperatures.  
The allowable radial loads are applied as shown in the following diagram.

- \*4. This is a non-excitation brake. (It is released when excitation voltage is applied.)
- \*5. The operation time is the value (reference value) measured with a surge suppressor (CR50500 by Okaya Electric Industries Co., Ltd.).
- \*6. Direct current switching with a varistor (TNR9G820K by Nippon Chemi-Con Corporation).
- \*7. Direct current switching with a varistor (Z15D151 by Ishizuka Electronics Co.).

#### Torque-Rotation Speed Characteristics for 1,000-r/min Servomotors

- ♦ 1,000-r/min Servomotor (200/400 VAC)

The following graphs show the characteristics with a 3-m standard cable and a 200-VAC input.

- R88M-K90010H/T/F/C (900 W)

- R88M-K2K010H/T/F/C (2 kW)

- R88M-K3K010H/T/F/C (3 kW)

- R88M-K4K510T/C (4.5 kW)

- R88M-K6K010T/C (6 kW)

Note 1: The continuous operation range is the range in which continuous operation is possible. Continuous operation at the maximum speed is also possible. However, doing so will reduce the output torque.

Note 2: If the motor power cable exceeds 20 m, the voltage drop will increase and the momentary operation range will become narrower.
