

### Miniature Basic Switch with Low Operating Force and High Contact Reliability

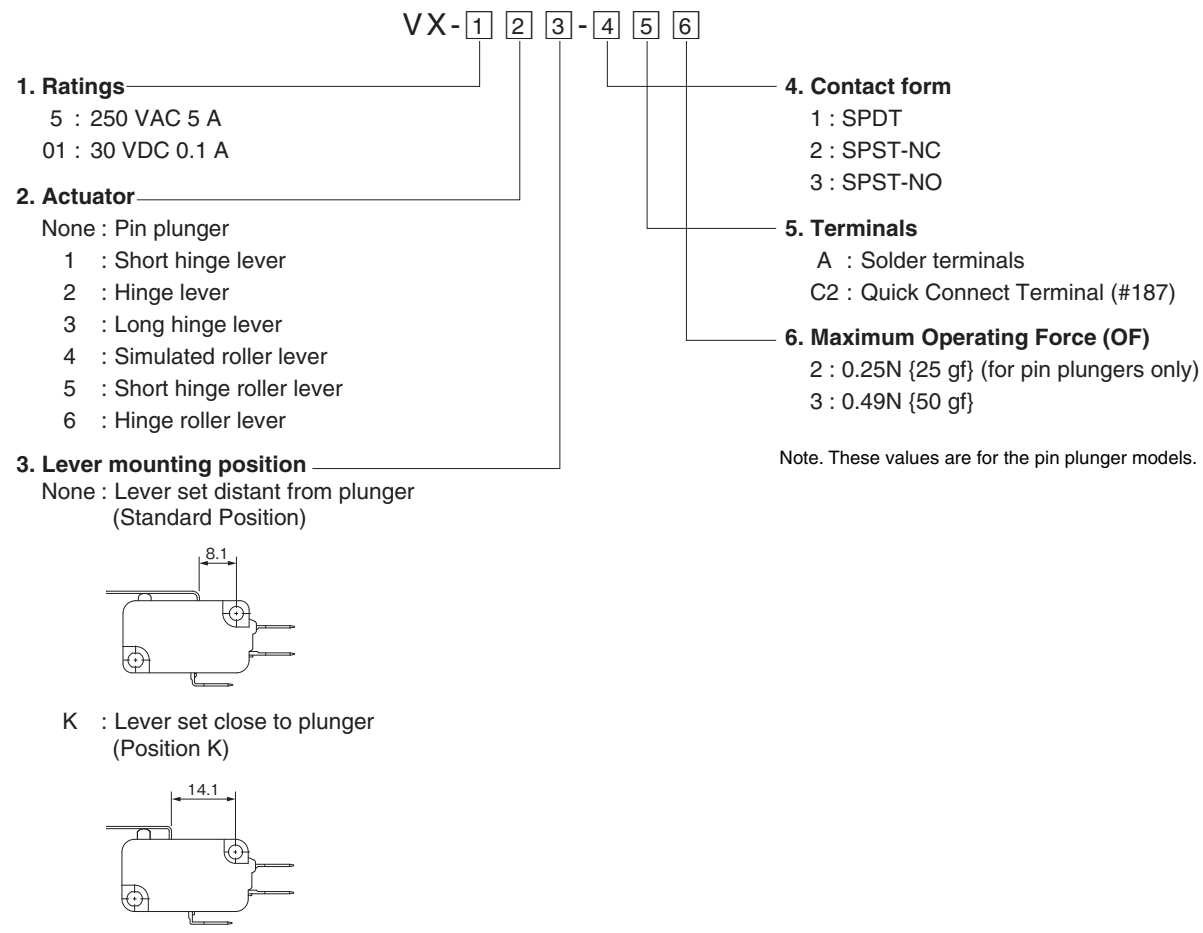

- Wide variation extends from micro load to 5A switching current, with shapes identical to those of the V-series Miniature Basic Switch.
- Unique internal mechanism ensures the high contact reliability even in micro load operations. Applicable for detection of lightweight objects.

RoHS Compliant

## Characteristics

Item	Model	VX-5 models	VX-01 models
Permissible operating speed		0.1 mm to 1 m/s (for pin plunger models)	
Permissible operating frequency	Mechanical	600 operations/min (for pin plunger models)	
	Electrical	60 operations/min	
Insulation resistance		100 MΩ min. (at 500 VDC with insulation tester)	
Contact resistance (initial value)		30 mΩ max.	50 mΩ max.
Dielectric strength *1	Between terminals of the same polarity	1,000 VAC 50/60 Hz for 1 min	
	Between current-carrying metal parts and ground	1,500 VAC 50/60 Hz for 1 min	
	Between terminals and non-current-carrying metal parts	1,500 VAC 50/60 Hz for 1 min	
Vibration resistance *2	Malfunition	10 to 55 Hz, 1.5 mm double amplitude	
Shock resistance	Durability	400 m/s <sup>2</sup> {approx. 40G} max.	
	Malfunition *2	100 m/s <sup>2</sup> {approx. 10G} max.	
Durability *3	Mechanical	50,000,000 operations min. (60 operations/min)	10,000,000 operations min. (60 operations/min)
	Electrical	500,000 operations min. (30 operations/min)	1,000,000 operations min. (30 operations/min)
Degree of protection		IEC IP40	
Degree of protection against electric shock		Class I	
Proof tracking index (PTI)		175	
Ambient operating temperature		-25 to 105°C (at ambient humidity of 60% max.) (with no icing or condensation)	
Ambient operating humidity		85% max. (for 5 to 35°C)	
Weight		Approx. 6.2 g (pin plunger models)	

Note. The data given above are initial values.

- \*1. The values for dielectric strength shown are for models with a Separator (refer to "Micro Switch Common Accessories").
- \*2. For the pin plunger models, the above values apply for use at the free position and total travel position. For the lever models, they apply at the total travel position. Close or open circuit of the contact is 1 ms max.
- \*3. For testing conditions, consult your OMRON sales representative.

## Precautions

★Please refer to "Common Precautions" for correct use.

### Cautions

#### ●Handling

Do not apply excessive shock. Doing so may cause damage to the Switch's internal components because it is designed for a small load.

#### ●Soldering

- Terminal connections

Complete the soldering at the iron tip temperature between 250 to 350°C (60W) within 5 seconds, and do not apply any external force for 1 minute after soldering.

Apply minimum amount of flux required. It may result in contact failure once the flux penetrates into the internal part of the Switch.

- Connecting to Tab Terminals (#187)

When connecting to the Tab terminal, insert the receptacle of tab #187 straight toward the terminal.

Applying excessive external force laterally may cause deformation of terminals and may damage the housings.

### Correct Use

#### ●Mounting

Use M3 mounting screw with plane washers or spring washers to securely mount the Switch. Tighten the screws to a torque of 0.39 to 0.59 N·m {4 to 6 kgf·cm}.

#### ●Mounting Direction

For a Switch with an actuator, mount the Switch in a direction where the actuator weight will not be applied to the Switch. Since the Switch is designed for a small load, its resetting force is small. Therefore, resetting failure may occur if unnecessary load is applied to the Switch.

#### ●Using Micro Loads

Using a model for ordinary loads to open or close the contact of a micro load circuit may result in faulty contact. Use models that operate in the following range. However, even when using micro load models within the following operating range, if inrush current occurs when the contact is opened or closed, it may increase the contact wear and so decrease durability. Therefore, insert a contact protection circuit where necessary. The N-level reference value applies for the minimum applicable load. This value indicates the malfunction reference level for the reliability level of 60% ( $\lambda_{60}$ ).

(JIS C5003)

The equation,  $\lambda_{60} = 0.5 \times 10^{-6} / \text{operations}$ , indicates that the estimated malfunction rate is less than  $\frac{1}{2,000,000}$  operations with a reliability level of 60%.
